Right now I am listening to my Blaupunkt Derby 691 radio that I bought from Brian Hill last year.About two or three months ago,I dozed off on doggy's couch and I had a nightmare.I tipped over the radio and bent the antenna,it looked like a broke d... dog.When I tried to straigten out the antenna,it broke.I can always solder it back together with my Bernz O Matic handheld propane torch.

The drifting seemed to stop around 23:30 utc to a Freq of 6.486.4

I heard many spanish words but doesn't sound like spanish if that
makes any sense. The music doesn't sound spanish either

I sure wish I knew all of these languages.

I heard Republica unkown word unknow word Democratica for sure

At 00:00UTC I have a female in what sounds to be "Arabic". The music is
"middle eastern"
as well. I have a FSK (100B RTTY) just above the deisred signal
A male is now (00:02) reading a poem, maybe Quaran.

That is the one.The UTE station came on at around 23:55 & I switched to
LSB.

I thought it sounded like spanish spoken with an arabic accent :)

S/off was at 00:03 utc & I did make out an OM saying "Buenas Notches" &
then Marching Band type Music.

I need to spend much more time listening to unknown Lang's to get an
ear for what they sound like.

Hardly - you have 10 guys with sweaty palms and escalating pulse rates
all counting the seconds before pushing Enter to send that last killer
bid and they will likely overbid because they gotta beat everyone else.
Pre-emptive bids are common as are the guys who bid and rebid in the
final minutes. Just enter the maximum you would pay as a proxy bid and

let Ebay do the bidding. I guarantee you if nobody enters a higher bid
that you will win the item.

UK has a good language program. It might help to call there and see if
you
could arange samples of the more "common" languages.

Spain still has influence and maybe contol in some parts of north
africa.
It wouldn't be too surprising to find a station with a odd mix of
Spanish
and Arabic.

I will try to monitor the frequency Thursday and see if I can
understand anything.
Four semesters of Spanish at UK didn't really prepare me for the real
world.

Native speakers talk too darn fast. And the local/regional accents are
a killer.
I never could understand Cuban Spanish.

My Professsora was a Spainish major and had studied ancient, pre
Islamic
conquest, Spainish and Arabic. We had a Jewish girl and it was
fascinating
to see the Professor and her compare Arabic with Hebrew.

Source record: 103551

The Astucia Report, with guest, Leuren Moret

(PART 1 of 2-PART SERIES)

60 minutes

INTERNET RADIO PROGRAM
Hosted by writer, Salvador Astucia

Sun, January 14, 2007 (first broadcast)

Topic of Show:

Livermore Nuclear Weapons Lab and its advocate, the late Edward Teller

CLICK HERE FOR MORE DETAILS AND TO ACCESS MP3 FILE.

http://www.jfkmontreal.com/AstuciaReport/ar_page.htm

Synopsis of Show:

This is the first broadcast of the Astucia Report. Our guest is Leuren Moret, geo-scientist, formerly employed at Livermore Nuclear Weapons Lab near San Francisco, California. This show is PART 1 of a 2-PART series from a telephone interview conducted on Dec. 11, 2006. Ms. Moret is a critic of US nuclear policy and has lots of interesting thoughts on that and other related topics.

The show begins with host, Salvador Astucia, explaining how he was introduced to Ms. Moret by journalist Christopher Bollyn, formerly a writer with American Free Press. Mr. Astucia states that he is interested in Ms. Moret because she has first-hand knowledge of Livermore Nuclear Weapons Lab, having worked there as a scientist for two years. Mr. Astucia states that he has linked individuals associated with Livermore Nuclear Weapons Lab to the assassinations of both President John Fitzgerald Kennedy and ex-Beatle John Lennon.

Leuren Moret makes the following observations that are consistent with many aspects of Astucia's research:

* Never met or worked with Edward Teller, but saw him from a distance as an old man. He was very grandiose. Ms. Moret discussed Teller with other scientists, some of whom worked with Teller at Los Alamos on the Manhattan Project.

* The general consensus of Teller, among scientists, was he was a "total failure...gross, uncouth, absolutely disgusting person...nobody liked him," according to Ms. Moret.

* Indicated that Teller was not a true intellectual. He essentially stole other people's intellectual properties and took credit for them.

* Said Teller was not truly the creator of the Hydrogen Bomb. The mathematics behind the theory for the H-Bomb was done by Stansilaw Ulam who is considered by most scientists to be the true father of the H-Bomb.

* Says the nuclear weapons industry often murders people who cause problems. She cites Karen Silkwood as a prime example. She claims Silkwood was murdered by Wackenhut, the security contractor at most nuclear weapons labs and facilities in the USA.

* Says she was harassed a great deal by police and military types across the country because she up and left Livermore in disgust; however, she was less of a threat because she did not work on classified projects.

* Claims there was a lot of cancer at Livermore Labs.

* Stated that Livermore Nuclear Weapons Lab and Los Alamos are run by the University of California, and employees of both labs are employees of the University.

* Indicated that security at Livermore was extremely shoddy.

* Stated that there was a strong military presence at Livermore, but she never saw any officers in uniforms. She assumed a lot of the support came from the Navy. (Note: Astucia challenged her on this point, citing historical documents showing the Air Force was Livermore's main supporter.)

Comming Soon:

PART 2 of Leuren Moret Interview

(PART 2 of 2-PART SERIES)

END

I have an old (as in 1978) programme schedule for the External Service of the Uganda Broadcasting Corporation (back when they broadcast to North America) which features a photo and message from "His Excellency Al Hadji Field Marshall Dr. Idi Amin Dada V.C., D.S.O., MC. President of the Republic of Uganda". I'm glad that I kept the programme schedule!

Narrow band signals do not have less fading.

> see that the carrier is just there for the ride.

Selective fading occurs when conditions cause a very narrow band of
frequencies to be received at very low amplitudes where most of the
side band information is present at levels that your receiver can
ordinarily demodulate properly.

When part of the side band is being notched out it does not sound all that bad but when the carrier gets weakened then the AM demodulator can't process the side band information properly and there is horrendous distortion. The carrier which is at the right frequency and phase relative to the side band information keeps the detector in the linear region so distortion is minimized.

A sync detector uses a local oscillator in a similar to the way SSB is detected with the difference that it is phase locked to the signal carrier and mixed with it so when the carrier fades out this near perfect copy of the carrier allows the demodulator to continue to detect the side band or bands without distortion during a carrier fading condition. Here this necessary frequency and phase information carried by the "carrier" is retained by the sync circuitry.

I'm a novice also (although I did scan SW bands with a Zenith tube AM/SW radio and also a Hallicrafter S-38 years ago). I have a related question. - Is there a website or book that lists the "major" international stations, or those normally easy to find and listen to (from Texas, in evening or night hours). In other words, there seem to be lots of sources listing lots of international stations. But for a novice, it would be much easier if I could start with the more powerful ones (broadcasting in English, French, or Spanish). I'll also look forward to searching for weaker, lesser-known stations, but I would like to begin with some of those transmitting strong signals to the US, midwest regions. Also the more powerful, better known stations.

I have the book "Passport to World Band Radio", 2007 edition, and I'm familiar with websites such as primetimeshortwave.com, but these sources seem to list around a thousand stations with no suggestion as to how to sort out those that would be relatively easy for a novice listener to pick up. (The "blue pages" of the "Passport..." book list broadcast station power in watts, which may be a clue.)

Does anyone know of a SHORT list of foreign stations that can usually be received fairly easy in the evening or night here in the midwest (e.g., the "top 30" or the "top "50")? Or, if that's asking too much, are there long lists that suggest which stations are more powerful, and relatively easy to pick up by a beginning DXer with relatively modest equipment, with a decent antenna?

Thanks,
Jim Cate

You don't have to get that close. All you need to do is not leave enough time for someone else to react to it, which is about 6-8 seconds.

1561. Antenna Questions, novice

Newsgroup: rec.radio.shortwave
Date: 2007-01-18 04:26:08 UTC
From: JimC <avocat5@sbcglobal.net>
Message-ID: <AFCrh.2319$O02.726@newssvr11.news.prodigy.net>
Source record: 103560

I'm trying to sort through some material I have read regarding setting up an antenna for general shortwave reception, probably in the 4,000 - 12,000 MHz range(??), for a modest SW receiver (table top model with AF gain, RF gain, band spread, S-meter, BFO Pitch adjustment, antenna trim, etc.). From the materials I have read, I can get reasonably good general SW reception (though not great reception of code or Ham broadcasts), with an antenna of around 30 - 100 feet. As understood, the antenna wire could be simply routed around the room; or, put in the attic; or, alternatively, strung outside, suitably in an "inverted L" configuration. (I'm not going to get into directionaly antenna arrays for Ham reception at the present time.)

If I string a straight length of antenna wire outside (which would probably be longer than the wavelengths of most signals I'll be listening to), is its reception directional, and if so, should it preferably be "aimed" in a certain direction? (Assuming that I would probably want to listen most often to stations that are located east northeast of our location here in Texas?) I'm guessing that it should be perpendicular to the direction from which most signals would come from. Also, is there a significant advantage to running it at an angle rather than horizontally, as in some designs?

Thanks for any suggestions.

Jim

Why do you make this stuff up? Just look at the multiple bids on the
typical ebay auction. What more proof do you need?

Here is some random auction, not quite done yet:
<http://offer.ebay.com/ws/eBayISAPI.dll?ViewBids&item=300070423454>
Sugar did an early bid, got wanked by bink, then rebid to get the lead
back, and the aution isn't done yet.

Why do you insist that the atmosphere treats the carrier differently from the rest of the signal? Geez. You have a spectrum produced by modulation. If the modulation is AM, then a carrier is present. Now you are saying the atmosphere is sucking out the narrow band carrier and leaving the wideband spectrum untouched. Fiction at best.

What makes you interpret my remarks as the "atmosphere" treats the
carrier differently than the rest of the signal?

You mean ionosphere. Phase cancelation is a frequency dependent
phenomenon and the modulation scheme or part of it does not matter.

When phase cancelation is narrow and right at the carrier frequency then
the carrier level goes down where the rest of the side band signal is
still good.

You been talking to John Smith or something?

It looks like you were in central NY state. How many of these stations
do you think were audible in the day? The reason I ask is I can receive
all of the NYC 50-KW AM stations in the day but for some reason I can't

get WHAM-1180 (50-KW) in Rochester, which is about the same distance as NYC from me. WHAM fades in near sunset and sometimes lasts to well after sunrise, which means I'm receiving them via skywave (ionospheric) propagation. I suspect they don't have an efficient grounding system for their antenna or the geology of western NY doesn't support good ground wave propagation on MW. Do you think you could receive WHAM in the daytime where you were located?

The sync' is doing what it's designed for by reducing the distortion caused by selective fading, but you need a longer time constant (release time) for the AGC, to help smooth out the fading. You could lengthen the time constant of the AGC circuit in the 7600GR but then it wouldn't work well for other conditions where a shorter time constant is needed. This is why a good table-top receiver has more than one AGC rate, which can be selected by the user. The AGC in the Drake-R8 series uses a decay rate of 300-ms for the fast setting and a much longer rate of about 2-seconds in the slow mode. The latter really aides in reducing the effects of rapid fading.

Unfortunately many of them have given up on this NG for obvious reasons. Take a look at the archives on Google-Groups for several years ago. We used to have some very informative posters here. There's still a few left but I don't blame the others for throwing in the towel. I've been tempted to do the same. Having a good message filter does help, but it's beginning to look like it's just not worth the effort to keep the filter updated. Too much QRN.

The World Radio TV Handbook (WRTH) sets out not only the freq., station names, target broadcast area but also the transmitters location and strength in kW. You can then decide which stations stand the best chance of being picked up in your region.

As a novice that just put up an antenna for listening maybe the
following will help.

I intially put up a windom antenna in the attic and had much RFI from
inside the house.

I did a lot of reading and asked many questions here and ended up with
the following.
I ended up installing an "inverted L" antenna. It is about 85 feet
long horizontal and 15 - 20 feet high as it covers the backyard. I
installed a hook at the peak of the house roof and a heavy spring off
an aluminum screen door. Attached to this I have about 45 feet of
nylon rope between it and the insulator at the start of the antenna
wire. This gets the wire at least 15 feet away from anypart of the
house to reduce RFI. From here the antenna wire, (#14 gauge insulated
stranded wire from Home Depot) goes 85 feet to an insulator that is
attached to a short lenght of nylon rope attached to a mast on an
outbuilding. The wire then goes down about 15 feet to a 10:1 balun

which is mounted directly to a ground rod sticking about 15" above the ground. From the balun I buried 135 feet of RG-6 outdoor coax about 5" under the grass and ends at a ground block at the house. The ground block is also connected to another ground rod installed nearby. From the ground block I have 50 feet of RG-6 coax that goes into the house and terminates at a TV type matching transformer with the guts taken out so I can attach to my recievers screw terminals.

The interferance that I got with the attic antenna is not there and this antenna is quiet and I recieve many more stations. I am happy with this setup and since I used white nylon rope, antenna wire, and insulators it is not an eye sore.

Hope this helps.

Brian

> are saying the atmosphere is sucking out the narrow band carrier and
> leaving the wideband spectrum untouched. Fiction at best.

Bzzzzt. Wrong!

Yes, the "atmosphere" [ionosphere] DOES "suck out a narrow band" or even a single frequency. Ask any amateur radio operator that has used RTTY (radio teletype).

The RTTY "modulation mode" used is FSK or frequency shift keying. At any given instant, the transmitter is sending either a "mark" or "space", essentially two carriers if you will, 170 Hertz apart that represent the 5-level Baudot code as used in ham RTTY.

As an aid to tuning, an oscilloscope is used as a tuning indicator; the mark signal from your RTTY decoder is connected to the horizontal plates of the 'scope, the space signal to the vertical plates. On the screen of the CRT (due to the persistence of the CRT phosphors and your eyes), this shows what appears to be a "+" sign, also known as the classic "cross display". When you see the cross on your screen, you know you are tuned in properly.

So, "What does this have to do with the discussion above?" you ask.

Remember, you are looking at essentially two "carriers", 170 Hz apart, one on the horizontal axis and one displayed on the vertical axis. During disturbed ionospheric conditions, many times you will see one signal or the other disappear; i.e., the cross turns into a single line, either a "-" or a "|", depending if the mark or space faded--and yes, sometimes both fade, but it is more common to see one or the other disappear.

This phenomenon is known to hams as "selective fading", is quite common and is interesting to observe.

So, yes, the ionosphere CAN suck out one signal separated from another by as little as 170 Hz.

But, is it 'sucking it out' or merely propagating it somewhere else other than that particular spot where your antenna is?

And that 'somewhere else' might not be very far away, but merely a few wavelengths in distance.

When the signal exists over more than one path there is a difference
in phase between the two signals that algebraically cancels some parts
of the signal and strengthens other parts.

Before satellites carried most of the milcom they used "diversity
receivers".
Two, or more, receivers tuned to the same frequency but located some
distance apart.
The logic being that when the singal faded at one location, the other
didn't fade at the
same time. The more important a comm cicuit the more receivers spread
over a wider
area.

A friend and I played with our receivers feeding phone patches and
since we live 30
miles apart it was clear this approach was workable. With signals that
experienced
deep fades we were able to listen to nearly all of the time. Real
(commercial or
military) had AGC based voting systems to decided which signal to pass.
We ran
into issues of our audio phases shifting producing very odd sounding
"flanging"
effects.

I have often thought about trying this with receivers whose antennas
are only a few
hundred to thosand feet apart. I never have gotten around to it.

The military also used freqeuncy diversity, sending the same singal on
more then one
frequency. Kind of like listening to WWV on 5 10 and 15MHz at the same
time.

Thanks for the information. - I had hoped to be able to get by with a less complicated system. For example, it would be difficult for me to bury 135 feet of coax in our backyard and connect through a suitable balun and matching transformer. Obviously, I need to do some further research.

Re my other question, does anyone have any thoughts about whether the horizontal antenna wire should be oriented to enhance reception in the direction in which most signals will arrive? (Recognizing that they are bouncing around, and that some will come from other directions.)

Well Steve, I sure will be filled with admiration if you get Pascua aeradio from far off Holland, MI.
And if you actually ever manage to get them to QSL that I will be even more over the moon for you.

I don't follow the WUN fella's anymore, but Pascua is a very rare catch indeed and I can't ever remember anyone getting a QSL - so good luck and my best wishes for that = I'm sure it will be a hard to beat first. A really tough cat and mouse target requiring all the finest DXing skills.

My rarest QSL 's were Nandi and Cambridge Bay - both took over a year and several desperate letters. In those days I didn't even have a tape deck, so my reports were laboriously handmade.
Another interesting one was Coco's Island before they went off the air permanently.

I wouldn't say all Chinese radios are junk. My DE1103 was the only radio with serious problems upon arrival -- the sound was very distorted and the LCD display was kind of wonky. The warranty replacement works well, it just has some irritating cosmetic flaws.

My DE1107's LCD clock display died after four months of use -- not critical. Other than that, the radio worked fine. My replacement is flawless, gets used at the office daily and it sounds great!

Judging by posts from various groups, American badged Kaito radios faired pretty much the same. I think it's bogus to make the blanket statement that all Chinese radios are junk, however it would be fair to say that their QC seems to be dodgy.

My Tecsun BCL3000 arrived in perfect condition, gets used daily and never displayed any problems.

I've long felt that some extra warranty to offset shipping costs back to China was in order.

Regarding orientation, your assumption is correct. A wire, up to a certain
length, oriented perpendicular to the desired signal direction will perform
best for those signals.

Do a google search in this newsgroup for "INVERTED L" DIRECTIONAL and
you will see the lengths needed to make an "inverted L"
omni-directional.

It is a very cool radio. I found one at a yard sale a year ago for 6
bucks. They do show up on Ebay, I just saw one sell there for $114.00 !
I have several old portables, including a Blaupunkt "Derby Deluxe". The
sound on them is so much better than todays offerings. The Blaupunkt
makes my CC Radio+ sound very bad. Good luck finding one,

Dave

Fascinating. It sounds like a couple of antennae, maybe even on the same property but spaced some modest distance apart, maybe a few hundred feet, and phased into the same radio, might also be a solution to the problem.

Anyone try this with a 50-acre lot and a phasing harness?

I don't think that would work properly. In practice, I think you need the 'voting machine' that works on two receivers AGC to pick the best signal.

I do recall some folks trying to emulate this to a certain degree by having two receivers, two antennas widely seperated (more than a wavelength), and feeding the audio to headphones (one receiver in the right ear, one in the left).

Diversity reception has been a well established practice since the early days. Hallicrafters produced a diversity receiver, which was actually two receivers diplexed into a single audio stage, fed by separate antennae.

May have been a bit of overkill. Separate antennae, if electically isolated from one another, diplexed into a single input can produce similar results: reducing selective fading before it reaches the receiver.

When I lived in Rockford, I rented a two bedroom home on a private estate west of town. The rental property included several acres on a hilltop, and access to the private lake on the estate.

Of course, I went antenna crazy. And using multiple antennae into the BC-794, was able to mitigate a good deal of the selective fading throughout most of the HF spectra.

Each antenna was connected to an RF preamp with a gain of 2-6db. The outputs of the preamps were combined through resistive pads (for isolation) into the RF input of the BC-794. The result was nothing short of amazing, with fading distortions dramatically reduced, and program listening, was quite pleasant. Even my wife was no longer critical of SW listening.

Make no mistake, it wasn't FM quality. But it was fine wideband (when conditions permitted) AM quality. And though there WAS some latent fading remaining, it was, by far, less objectionable, and often barely noticeable than a single antenna on the same receiver.

Diversity, at least in this case, is something to be implemented with affirmative action. :)

>[pause] I hear on some shortwave freqs?

Er, a frequency would be nice.

I assume you're in AM mode. To really get a handle on it, listen
in SSB mode.

A couple of possibles, one is a ARQ-TOR signal. This is a ship to
shore digital system for teletypes (ARQ - automatic request (for
retransmission?) TOR - Telex Over Radio). With SSB on, it's
a Dreep-Dreep-Dreep signal. Around 6300 kHz, I think, but there
are almost a dozen maritime mobile bands where it can occur.
Hams also use it, in a slightly different way. Maritime users
have two frequncies, one for the ship, one for the shore station.
Hams use the same frequency for the shorter ack packet, so it's
more like Dreep-drp-Dreep-drp with one side or the other having
a stronger signal.

Another is the dreaded CODAR. This is some sort of over the
horizon radar used to measure wave heights or something like that.
Depending on where you are in the signal, it sounds like a couple
of chirps or a chirp-swish-chirp-swish. 12095 kHz is one hangout,
around 4800 kHz is another.

I fed the output of the phone patch intop one ear and my radis audio
into the other.
Gave me a splitting headache that turned into a miagrane. So I cheated
and
just fed the patch aduio into one speaker and used the local receiver's
speaker.

Like I mentioned it worked very well, but the aduio sounded very odd.

A "Rolling hollowness is the best discription I can come up with.

I will have to try this tonight!

I have 2 very nice active dipoles seperated by about 100'. Right now I
am using
a "phaser" to "rotate" the beam/pattern. It will be very easy to
coulple them via a
Mini Circuit power divider/combiner!

Thanks for the hint. I had always assumed you needed "fancy"
electronics to
do this.

Ok, I got it. I kinda figured the band was very narrow where you would lose carrier. The fade is probably moving around the transmitted spectrum like a game of musical chairs. I figured I was going to have to play with AGC some so I'll probably throw an agc amp on the board as well.

Thanks Brian. - However, I didn't want it to be omni-directional. I prefer that it be more sensitive to signals coming from a certain direction. (I may use another antenna for signals from other directions.)

You rarely need 'fancy' electronics to experiment. And as I recall (I'll have to dig out my notes on this--I did a lot of experimenting, there, due to the RF quiet...including using an AK Model 30 as a high fidelity air monitor for airchecking...LOVE those infinite impedance detectors) it really was this simple.

But reading Steve's comment about switching and AGC in diversity reception, I'm thinking there may have been an additional stage in my installation. Though I don't specifically recall this. I do recall that the AGC was swithed off, and the RF gain was manually set.

But, it was 30 years ago, after all. I'll have to dig out my notes.

Regardless, there is nothing to be lost in the attempt. And if you find something that works, that streamines what I did, please share the wealth.

Run a wire in any direction you wish. It won't be directional enough
to matter. Just get it as high as you conveniently can. And it will
pick up ham signals just fine if it's in the general range of 30' to
100' feet, as you indicated. Hams make their antennas in certain exact
lengths because of transmitting requirements, but for simply receiving
signals, length doesn't matter that much. Have fun...

Thanks for the tip Ace.

You are correct once again. It was Western Sahara REPUBLICA ÁRABE SAHARAUI DEMOCRÁTICA. I checked the interval signals.net web site & the NA audio recording matches what I called " Marching Band type music"

I have around 45 minutes & the S/Off ID recorded. I just need to listen really closely now I know what to listen for.

Give us a better clue - post the actual frequencies, so we can listen
to it, too.

Right off the top of my head though, your description brings to mind
ANDVT (Advanced Narrowband Digital Voice Terminal), but it's hard to
come up with a definitive mode ID without listening to a signal.

Looks like Mr. Sillett has given up on his Shortwave Log program. His final post to his Yahoo group was that he couldn't reproduce the problems people were having with V5 and that he didn't appreciate the tone of some of the comments he was getting. The next day, the Yahoo group was gone.

Too bad.

You know, I never used his program but the same thing has happened with other computer programs and I can sympathize with the people who produce them. Invariably the author starts off producing the program as a "labor of love" but, sooner or later, some - sometimes many - people complain and annoy the program writer and they do it in a way that is just mean.

How many of you who use a program that you have found useful have taken the time to write to the author and thank him/her for it? We cannot financially support each and every "free" program we use, but we can ALL thank the writer!

It is a pity that many people - hopefully not any readers here - just don't demonstrate good manners and show appreciation for something someone else has done for them. Oftentimes we do notice a flaw or we may have a suggestion for the author and making a constructive suggestion (or even constructive criticism in a kind way) is beneficial to the author and is most often welcomed by him/her. But no one welcomes nasty comments and, frankly, there is just no call for them.

If all of us would live by the "Golden Rule," wouldn't this be a far better world?

As always, just my thoughts.

Best,

Joe

At 16:43EST (21:43UTC) on 6.486MHz a signal with music that sounds
Irish, or Celtic, with a lot
of shouting going on. S5 with muffled audio.

At 21:46 went to silent carrier.

I must be doing something wrong.

Frequency 6.486MHz (BTW arabic male)

I first tried 2 active dipoles seperated by 100' on a north to south
line.
Next I tried a 50' wire 6' off the ground with a WinRadio WR-LWA-0130
"long
wire adpator, with either of the active dipoles, then I ran another 50'
at right
angles for the first, also with a WR-LWA-0130 and tried them all with
my
Mini Circuits ZFSC-2-1, that while rated for 5~1000MHz operation has
been
tested and it works fine down to well below 100KHz.

The nulls we less frequent but much deeper when they came.

I then used a 2nd R2000 and fed each receiver with different antennas
and just let
the audio "mix" from the respective speaker outputs. The active dipoles
gave the
best overall effect. There was a very pronounced comb filter effect
kind of like
The Small Faces "Itchycoo Park" from 1967, or Gobi Grant's "The
Westward Wind".

Not too bad I think I will investigate some more this weekend.

At this point a couple of active dipoles into a broadband "phaser"
allow me
to peak the signal and that works better the diveristy. Now what would
happen if I had 2 sets of active dipoles feeding seperate phasers
feeding
seperate receivers?

I can get at the AGC in my R2000 fairly easily and it should be fairly
simple
to build a comparator to pass the strongest signal to the audio chain.

Just what I need another radio project.

I am a filthy c*nt named madMaxWhore. I am the type of girl that only gets taken to White Castles because guys give me a $2 or $3 dollor limit. If I want something more expensive, I have to go by the dumpster behind White Castles and open my legs for 5 cent deposit cans and then after I get sodomized and f8cked by the homeless population, I have to redeemed the bottles and cans to get the extra money. The homeless men love sticking the cans up my filthy vagina and watching them melt from the toxcitiy.

Sometimes the stores won't take my cans and bottle because of the thick discharge on them and the foul stench of the cans and bottle (because of my diseased discharge)

By the time I get back to the fast food joint my date is gone. I guess they met someone that will douche and won;t settle for a skanky whore like me.

I lose every flamewar I enter because the toxic fumes from my diseased undouched vagina impair my already damaged brain. I want to be owned by the best flamer I ever encountered in life refuses to own me because my vagina is so filthy and toxic. I get beat down by everyone on usenet. Even my provider Usenetserver.com beats me down.

I want to get married but I am a known whore whose only good for pumping and dumping. I am so embarrassed at being thoroughly thrashed by all of my Usenet enemies. For those that aren't so picky about douching, I am owned by 70% of the alt.usenet.kook population.

My daddy initiated me into the world of sex and I have been getting buttsexed by him regularly ever since I was five years old. I drip toxic discharge from my filthy vagina. I have vaginal hair longer than the hair on Crystal Gayle's head. Guys just pump me and then dump me. I'm the kind of girl that gets sexed in alley and behind dumpsters

I don't get it. - If I submit a bid higher than other bidders are willing to pay, what difference does it make whether I submit the bid six seconds or six days before bidding closes? - The results are the same. Also, using the incremental bidding system, I set the maximum I would be willing to pay yet don't ususally have to pay that much, and I avoid paying an amount significantly greater than the other highest bid.

1638. MI5 Persecution: Dirk Gently on the Toronto Case (150)

Newsgroup: rec.radio.shortwave
Date: 2007-01-18 22:10:27 UTC
From: MI5Victim@mi5.gov.uk
Message-ID: <m07001823044929@4ax.com>
Source record: 103545
Cross-posted to: mailing.freebsd.cvs-ports,alt.cellular.sprintpcs,rec.radio.shortwave,be.burgerrechten,alt.pictures.erotica.longlegs

Dirk was on the West Coast when he got the call. An old friend at the Toronto police department thought he would like to fly up and take a look at a homicide which had occurred the previous evening. He decided to skip the last day at the World Holistics conference and take the next plane out of San Francisco.

The flight was bad; Dirk had been hit on the back of the head by the Newspaper trolley, the drinks trolley, the dinner trolley and now the gift trolley. When the hostesses weren't trying to tear his arm off they pestered him to stop leaning into the aisle - ignoring the fact that the guy next to him was taking up one and a half seats. Air Canada used to be the flight which was so good you just didn't wanna get off - on this occasion Dirk would be glad to see the back of the plane and the over sized alternative comedian wedged into the window seat.

After breathing in a couple of lungfulls of crisp Canadian air Dirk took a taxi into town. There was a small group of demonstrators outside the MacDonalds and the taxi driver insisted on stopping on the opposite side of the street. "Don't Eat Meat" the placards read and the demonstrators chanted. A couple of policemen where stopping the crowd entering the restaurant itself - one held up his arm and challenged Dirk. A wave of the fax he had been sent and the policeman pushed open the door.

There were few customers in the restaurant. Not surprising really with a demonstration going on outside, half the dining area roped off with tape and a dead body seated at one of the tables. "Mr Gently sir" the officer in charge called out as he peeled one end of the tape off a column "We were told not to touch anything til" you got here".

The body of the man slumped awkwardly in a chair. Then even a dead body would start getting uncomfortable in a MacDonalds chair after twenty minutes - and this one had been there for at least eighteen hours. Two back legs and the tail of a cat hung out of the man's gaping mouth. Dirk turned to the officer, "I suppose you are going to tell me this is the darndest thing you ever saw?"

"Ain't this the darnd...". The officer seemed annoyed that Dirk had second guessed him. "We're removing the body in a few

minutes, so if you can get through as quick as possible&#65533;

&#65533;Many people eat cats in fast food restaurants?&#65533; Dirk asked and without waiting for an answer leant over the table to pick up an untouched burger. &#65533;And what&#65533;s this?&#65533; he asked waving it in front of the officers face.

&#65533;It&#65533;s a Vedgie Burger&#65533; The waitress, who was cleaning one of the adjacent tables, shouted across. She walked over to Dirk. &#65533;We started doing them because of that lot out there&#65533; she nodded towards the protesters who were pressing there faces against the windows &#65533;They&#65533;re called Linda McCartney Vedgie burgers - ever heard of them?&#65533;

Dirk suddenly felt faint, perhaps a combination of hunger and jet lag. &#65533;This is deja vu all over again&#65533; he thought to himself. He glanced at policemen - at the badge on his shoulder &#65533;OPD&#65533; but this wasn&#65533;t Ontario this was Toronto. OPD - Officially Pronounced Dead. It dawned on Dirk what was happening, he knew what he would see if he looked out of the window. Sure enough, there it was, the Volkswagen Beetle parked across the road - number plate 28IF - 28 IF Paul McCartney had lived. And amongst the lyrics of the song blaring out into the restaurant he could pick out the words &#65533;I buried Paul&#65533;. Now it was though Dirk was viewing the whole scene though a TV screen. This was conspiracy. Not -a- conspiracy, or -the-conspiracy, but just plain conspiracy.

&#65533;You look faint - are you OK mister? The waitress asked.

Dirk shook his head &#65533;Probably a bit hungry&#65533; Then to economise on dialogue took out a pack of cigarettes and held it out towards the girl. She was about to take one but Dirk snatched the pack away, held it up to his mouth and drew out two cigarettes. He lit both then passed one of them to the girl. It was the closest he had come to a sexual encounter in three months.

&#65533;Want a Burger?&#65533; the waitress asked.

Dirk looked down at the Vedgie Burger on the table. &#65533;No thanks - just a plate of fries&#65533;

The waitress walked away and Dirk looked around the room. Apart from a family seated in the far corner there was only one other person in the restaurant - and he wasn&#65533;t eating. The guy was about mid twenties and had straggling, shoulder length hair. On the table in front of him were lots of pieces of paper cut into squares. Every so often he would pick up a camcorder and pan it around the room and then, when he was finished, speak into a microphone which was attached to a tape recorder. Dirk walked over to where the man was sitting.

The small pieces of paper had paragraphs of text written on them and were stuck to the top of table with blobs of mustard. Lines had been drawn, some solid some dotted, on the table top with a marker pen. The lines ran from one piece of paper to another.

"What are the lines for?" Dirk asked, realising straight away that "What the hell are you doing?" would be more appropriate.

"You see" The man replied nervously "The dotted lines are weak links and the solid lines are strong links. The dotted lines are things which are happening in the rest of the world and the solid lines are things which are happening to me. Now you see I draw over a dotted line, replacing it with a solid line, when I can link something back to me. Like this" The pen squeaked over the Formica and before Dirk could interrupt the man added. "You see I lost my short term memory and, as a consequence have a very short attention span. I write down, record and film everything then put it all together later"

"So" Dirk interrupted. "You filmed what happened here?"

"Yes, yes, it"s here on this tape" The man pushed the cassette across the table. On the label the words "Grassy Knoll" had been crossed through and replaced with "MacDonalds".

Suddenly the man sprung from his seat. Dirk turned and saw that the body was being removed on a stretcher. As it passed the man picked a small object off the edge of the stretcher itself. "This is important" he said, laying a blood stained bullet on one of the small pieces of paper on the table.

Suddenly the room was filled with a deafening throbbing sound as a Black Helicopter landed in the street outside. Two men in United Nations uniforms got out and collected the stretcher. Back at the table the long haired man was replacing all the dotted lines with solid ones. Dirk panicked and began to walk backwards at some speed. Barging through the swing doors he stumbled into the kitchen, tripped and felt himself sink slowly into a large vat.

"The guys fallen into the batter" Dick heard someone shout before he sunk below the surface. He came to sitting in a chair with the batter solidifying all over his body. He surveyed the room through two eye-holes someone had cut. Suddenly the chair on which he was sitting was picked up carried through the restaurant and out of the building. As the chair was being lifted and put into the back of a van, Dirk caught a glimpse of the waitress following him. "Your fries mister, your plate o..."

The doors of the van shut and Dirk tried desperately to steady himself as it sped across town. Eventually the doors flew open and Dirk was flung into the road at which point the solidified batter shattered and set him free. Standing up he found himself outside the international departures terminal of Toronto airport.

In the departure lounge Dirk had time to reflect on the day's events. He had got caught up in the conspiracy theories and the haphazard welding together of pieces of irrelevant information. It was time to catch the person who was operating the bizarre cognitive engine which appeared in front of him like a fairground mirror, distorting any flaw it could find in his own, fragile, map of the real world.

Dirk leant into the aisle of the plane as it took off for London. The oversized person next to him swung his arms violently as he complained about every thing from the supper in a plastic tray to the state of British politics. With a shaven head and a badly fitting suit the man looked as though he could have worked behind the reception desk of the Kremlin. However when he spoke he did so in a Liverpudlian accent. "Me I blame the Con-serv-a-tive government, me. The Tour-rees. That-cher. Me. They need a good kicking" He jerked his feet forward and struck the seat in front with his Doc Martins. "With these. Me Doc Martins. Doctor Martin's, Doctor Martin's, Doctor Martin's Booots!" The phrase was now being sung over and over again as the man writhed in his seat and clicked his fingers.

Dirk looked down at the boots and thought of the reaction most people used to deal with the paranoids at the end of the wire. A nice quick kick. "Oi nutter - get some therapy". This is the easy way out and perhaps the safest. After all there you are sat, alone, in front of the screen. No body language between you some paranoid. No way of telling if he really is some gibbering psycho. Look at it too long and you be drawn in. Fall into the tangled database of weird links with him. Who knows he may be watching you, reassembling and linking your experiences with his. How sure are you of you own cognitive threads. After all cognition is only a bug fix for a neurological system which was designed in a hurry - it's abused by everyone from politicians to advertisers. If people really can convince each other that a bottle of washing up liquid is as exciting as an orgasm using just television God knows what they can do with a computer. Better to avoid the risk. A swift kick. After all if you're Homophobic you put the boot in because you are scared of any ambiguity in your own sexuality - why not be Nutterphobic as well.

Although Dirk would have liked to devoted time to tracking the culprit down he decided to let it rest. The Internet changed over the next twenty odd years. A lot of the people who used it went out and got lives. And those who already had lives burnt them away. The number of users had dwindled after someone had invented a C++ program, with truth as a variable, to deal handle politics and government. Dirk had already retired from finding old ladies cats with the help of obscure science when he got another call from Toronto.

It was 4th March 2025 when he booked onto the Air Canada flight from Heathrow. The silver haired woman in the seat next to him painted bright red lipstick around her mouth. "Of course it was no surprise to be offered the job after Claire Raynor retired" she sneered" After all I used to be a psychiatric nurse... Now if Blokes had periods they would understand..."

By chance the taxi ride to Toronto mental hospital took him past the MacDonalds - where the whole thing had started. Of course it was barely recognisable having become a Church Of Scientology Vedgie Bar. Police in riot gear kept the two sets of demonstrators apart. Dirk didn"t really know what to expect when he got to the hospital. The girl at the reception desk directed him to a row of chairs in a wide well lit corridor. There was a strong smell of disinfectant, the furniture and the carpets were immaculately clean and behind the rows of teak veneer doors the "nutters" were all safely locked away. For some reason Dirk started thinking about CompuServe forums.

A tall blond woman in a white coat approached. "Mr Gentle, I assume"

"Yes" Dirk replied shaking her by the hand. "You"re the nurse who..."

"Doctor" She interrupted, "Doctor Killfile" She led Dirk across the corridor towards one of the doors then stopped with her hand resting on the handle. "Now you know about this person don"t you?" and after Dirk nodded she continued "Don"t tell him anything about yourself - don"t let him get into you head. If he does he"ll screw it up"

The door opened to reveal a frail man sitting in from of a TV screen. He had a keyboard on his lap and next to the television was a computer screen. Dirk glanced at the walls of the room and remembered that his settee at home need upholstering. The nurse left the room and the man looked up "So you come to my daughters wedding and ask me to kill a man" he said in a dry cackling voice. "Look" he continued, pointing at the screen, "I know that man. They"re talking about me now -

listen&#65533;. The man stared at Dirk. &#65533;What&#65533;s your name? Are you one of my friends from the Internet? - Are the lambs still screaming Dirk?&#65533;

Dirk, at first recoiled in horror, then felt a sense of anti climax. So this is what they hyped up to superstar status on the back of their own fears of madness. Dirk was reminded of the film &#65533;A day on The Beach&#65533; where a submarine had set off to search a post nuclear World to track down a signal coming from a remote military base - only to find it was being sent by a Coke bottle half balanced on a Morse tapper. Outside the room the nurse waited for him. Because his nicotine craving had returned - and to avoid an awkward piece of dialogue - Dirk turned to her and asked . &#65533;Patch?&#65533;

Dirk took two nicotine patches from his wallet the first of which he stuck onto the inside of his arm. Stepping closer to Doctor Killfile he opened her white coat and slid his hand into the opening at the front of her dress. He pressed the patch onto her leg as close to the top of her inner thigh as he dare. She took a deep breath and then slowly breathed out. &#65533;What Bogart could have done with these things&#65533; Dirk thought to himself.

&#65533;Is he crazy?&#65533; Dirk asked tilting his head back to towards the door.

&#65533;Who knows&#65533; Doctor Killfile replied &#65533;We let him type away. He sees something on the TV in the morning and it keeps him busy all day. What he types doesn&#65533;t go anywhere it just stays on a mainframe in the basement. It can be read by anyone else in the building but that&#65533;s it. We got them all in here conspiracy theorists, racists, nationalists. They&#65533;ve created a world within a world really...&#65533; Her voice trailed away and she stared down the corridor for a while then added &#65533;So long are two things are different neither will come to be in the other and so become at once both one and two.&#65533;

Dirk gave her a puzzled look &#65533;You mean their brains are fried?&#65533;

&#65533;Fried?&#65533; Killfile smiled at Dirk &#65533;No that was Plato&#65533;. Then the smile fell from her face. &#65533;You must remember, mister, plate o...&#65533;

Thanks for the information. - I'll try to get it as high as possible.
Does it matter significantly whether the wire extends horizontally,
vertically, or diagonally?

Jim

At 22:00Z they went to news.

It sounds like Arabic to me.
Some of the sound bytes have the oddest sounding
Spanish I have ever heard.

Maybe a mix of Spanish and Arabic?.

Anyone know what Basque sounds like?

I am recording it and will try to track down a former
coworker from Jorden and see if he will translate. Of
course if this is a AQ call to arms I guess HS will
hustle me off to Cuba. :)

Terry

The reason seems to be a bunch of non-computer users who were having problems and constantly bitching about them. I think he said screw it after all he had worked for years on that program and didn't like the tone of new users. I posted an email indicating that I would assist in troubleshooting but never got a reply. Bob if you are reading this thanks for the program and all the work you have done! Great job!

Mike Corley FAQ
version 0.1
first edition 5th May 1996
last updated 5th May 1996
Iain L M Hotchkies iain@XXXXX.demon.co.uk

Mike Corley is a 'net personality' who has been active on the following newsgroups (uk.misc,uk.legal,uk.politics,uk.media,soc.culture.british) since....? Well, at least as far back as the summer of 1995.

He posts long tracts, the tone of which approximates that which one might expect from a reasonably intelligent paranoid schizophrenic.

No details are known of Mike's 'real' personal life or background. Once would presume that he came from a reasonable family and was reasonably well educated before the first symptoms of schizophrenia began.

Schizophrenia: Clinical features
(from the Oxford Textbook of Psychiatry, 2nd Edition)

The acute syndrome

Some of the main clinical features are illustrated by a short description of a patient. A previously healthy 20-year-old male student had been behaving in an increasingly odd way. At times he appeared angry and told his friends that he was being persecuted; at other times he was seen to be laughing to himself for no apparent reason. For several months he had seemed increasingly preoccupied with his own thoughts. His academic work had deteriorated. When interviewed, he was restless and awkward. He described hearing voices commenting on his actions and abusing him. He said he believed that the police had conspired with his university teachers to harm his brain with poisonous gases and take away his thoughts. He also believed that other people could read his thoughts.

This case history illustrates the following common features of acute schizophrenia: prominent persecutory ideas with accompanying hallucinations; gradual social withdrawal and impaired performance at work; and the odd idea that other people can read one's thoughts.

In appearance and behaviour some patients with acute schizophrenia are entirely normal. Others seem awkward in their social behaviour, preoccupied and withdrawn, or otherwise odd. Some patients smile or laugh without obvious reason. Some appear to be constantly perplexed. Some are restless and noisy, or show sudden and unexpected changes of behaviour. Others retire from company, spending a long time in their rooms, perhaps lying immobile on the bed apparently preoccupied in thought.

The speech often reflects an underlying thought disorder. In the early stages, there is vagueness in the patient's talk that makes it difficult to grasp his meaning. Some patients have difficulty in dealing with abstract ideas (a phenomenon called concrete thinking). Other patients become preoccupied with vague pseudoscientific or mystical ideas.

When the disturbance is more severe two characteristic kinds of abnormality may occur. Disorders of the stream of thought include pressure of thought, poverty of thought, and thought blocking. Thought withdrawal (the conviction that one's thoughts have been taken away) is sometimes classified as a disorder of the stream of thought, but it is more usefully considered as a form of delusion.

Loosening of association denotes a lack of connection between ideas. This may be detected in illogical thinking (knight's move) or talking past the point (Vorbeireden). In the severest form of loosening the structure and coherence of thinking is lost, so that utterances are jumbled (word salad or verbigeration). Some patients use ordinary words in unusual ways (paraphrasias or metonyms), and a few coin new words (neologisms).

Abnormalities of mood are common, and of three main kinds. First, there may be sustained abnormalities of mood such as anxiety, depression, irritability, or euphoria. Secondly, there may be blunting of affect, sometimes known as flattening of affect. Essentially this is sustained emotional indifference or diminution of emotional response. Thirdly, there is incongruity of affect. Here the emotion is not necessarily diminished, but it is not in keeping with the mood that would ordinarily be expected. For example, a patient may laugh when told about a bereavement. This third abnormality is often said to be highly characteristic of schizophrenia, but different interviewers often disagree about its presence.

Auditory hallucinations are among the most frequent symptoms. They may take the form of noises, music, single words, brief phrases, or whole conversations. They may be unobtrusive or so severe as to cause great distress. Some voices seem to give commands to the patient. Some patients hear their own thoughts apparently spoken out loud either as they think them (Gedankenlautwerden) or immediately afterwards (echo de la pensee). Some voices seem to discuss the patient in the third person. Others comment on his actions. As

described later, these last three symptoms have particular diagnostic value.

Visual hallucinations are less frequent and usually occur with other kinds of hallucination. Tactile, olfactory, gustatory, and somatic hallucinations are reported by some patients; they are often interpreted in a delusional way, for example hallucinatory sensations in the lower abdomen are attributed to unwanted sexual interference by a persecutor.

Delusions are characteristic. Primary delusions are infrequent, and difficult to identify with certainty. Delusions may originate against a background of so-called primary delusional mood - Wahnstimmung. Persecutory delusions are common, but not specific to schizophrenia. Less common but of greater diagnostic value are delusions of reference and of control, and delusions about the possession of thought. The latter are delusions that thoughts are being inserted into or withdrawn from one's mind, or broadcast to other people.

In acute schizophrenia orientation is normal. Impairment of attention and concentration is common, and may produce apparent difficulties in remembering, though memory is not impaired. So-called experiences result from illness, but usually ascribe them to the malevolent actions of other people. This lack of insight is often accompanied by unwillingness to accept treatment.

Schizophrenic patients do not necessarily experience all these symptoms. The clinical picture is variable, as described later in this chapter. The table below lists the most frequent symptoms found in one large survey.

The most frequent symptoms of acute schizophrenia (World Health Organization 1973)

Symptom Frequency (%)

Lack of insight 97
Auditory hallucinations 74
Ideas of reference 70
Suspiciousness 66
Flatness of affect 66
Voices speaking to the patient 65
Delusional mood 64
Delusions of persecution 64
Thought alienation 52
Thoughts spoken aloud 50

Various theories exist about Mike Corley:

1) he exists and is disturbed and has net access and for reasons uncertain spams a selected number of newsgroups on a regular basis - if you are reading this FAQ then you will almost certainly have seen

one of his posts.

2) Mike Corley is a 'virtual schizophrenic'. Mike displays the relevant features so well that some people think he may be a construction of one or more people with intimate knowledge of mental illness and the mentally ill. Perhaps they wish to monitor the effects on the internet of the posts of a schizophrenic. Moving into X-Files territory a bit, ourselves, here.

Mike's posts attract different responses:

1) cruel, humourous, dismissive posts from those who've seen his posts many times and have become generally irritated by his behaviour while accepting that he probably has a mental illness.

2) posts from Corley-newbies - those who have come across relateviely few of Mike's posts. These may be humorouous or disbelieving.

3) posts from people who have been sucked in (for one reason or another) into Mike's Wild & Wacky World (TM)

That's enough for now.

I emailed him just before he shut down the group and thanked him for all his work. I'm sure I couldn't put up with all the flak either. I was going to download the latest version and see if I could get it going but I never got that far. I had tried an earlier version of V5 and had problems. I think it would have been worth working through the problems. Unfortunately, I deleted the one I had before attempting to download the new one.

> Maybe i can snag one off of ebay...

Yeah I picked one up on eBay a few months ago - around $80 including
shipping.

It's a good radio. Better sounding and better FM reception than the 2200
(which I also have), but the 2200 is a much better MW/SW radio. The 1150
sounds nearly as good as the Grundig 650 (which I also have), is plenty
sensitive off the whip, but it's total lack of SW tuning aids (no
bandspread, no bandwidth filters, no SSB) make it nothing more than casual
listening SW radio. However, careful and VERY SLOW tuning will reveal
loads of signals, but you have no idea where you are because the dial
calibration is so bad.

But for room filling sound of local AM and FM - and the occasional SW
station once you get used to the tuning - it's hard to beat. The 70's
styling is complimented by the CB reception - very 70's indeed!

Mike

Well it is nice for someone who knows spanish that thinks it doesn't
sound like spanish even though most of it is :)

I was really doubting my ears this time yesterday as I can to the same
conclusion.But as I posted earlier it is Republica Arabe Saharauis
Democratica. I also heard the ID at 23:02 today.

Knowing what the ID should be sure helps when you hear it. It is really
hard to ID a station when you do not have a clue as to who they might
be.

Now ....where is this signal coming from? Algeria? It is loud but the
drifting is not a good thing. Oh well, they are on the air !

Yes, supposedly via Tindouf, Algeria.

1653. MI5 Persecution: Website Index (1951)

Newsgroup: rec.radio.shortwave
Date: 2007-01-18 23:44:37 UTC
From: MI5Victim@mi5.gov.uk
Message-ID: <m07001900390028@4ax.com>

Persecuted by the Security Service

Since June 1990 the British security service MI5 has waged a campaign of harassment against a UK citizen,
through the broadcast and print media, verbal abuse at work, and molestation in public and during travel.

Despite widespread knowledge of the campaign in the UK and discussion of its characteristics on Usenet for
over three years, it continues today both in Britain and North America. Its cause and basis is xenophobia
on the basis of the genetic accident of mental illness, coupled with discrimination against an inferior
"foreigner" whom they condemn as "not up to British Standards".

If this is your first visit to this site, please read the FAQ first. Feel free to contact the author with
any questions.

Frequently Asked Questions article outlines the parameters of the persecution. Who is involved, and why?
What technical and social means do they employ? What response have I made, and why has their campaign yet
to be exposed?

The UK Security Services which are believed to be behind it all. Domestic security is the province of MI5
while the secret intelligence service MI6 combats foes (and its former employees) on foreign shores.

Usenet archive chronicling the (sometimes very enthusiastic) exchanges which have taken place on UK-local
newsgroups since May 1995. Make your mark on the continuing discussion!

Believe it or not, a few items of evidence have been recorded. Although none of them is particularly
conclusive, by presenting them I hope to explain what I understand from some television and radio programmes.
Most of the "clinching" material was aired in 1990-92, and no recordings exist now, which is quite unfortunate.

My complaints to the BBC and MI5 (via the Security Service Tribunal and Interception of Communications Tribunal),
and their response to my challenges, are recorded here. Basically they deny everything, they have put their
denials (mostly - Buerk and Lewis refused) in writing, and I don't believe them. Part of

the website also
documents media coverage of my campaign to expose the persecution.

Faxed articles to, and responses from British organisations including Parliament and UK media. Over 24,259 faxes
in all were sent from 1998 to 2000. Their aim was to boot discussion of the persecution into the public domain,
and that aim was not accomplished.

Agreed...there was a cadre of people on his Yahoo group who seemed
barely capable of installing the software, let alone understanding
that it was a work in progress (with inevitable bugs). It was tiresome
even as a bystander to read their pissing and moaning, and I can see
how Robert finally got fed up with it.

I really hope he takes some time to decompress, recharge his
batteries, and brings SWLog back to life. I found it to be
indispensable once I got the hang of using it, and as I recall from
his website it had been around in one version or another since
1990(!). It was the only freeware program that I've ever found useful
enough that I made a donation to it anyway.

Sorry, I had a brain fart. The 1150 does indeed have a BFO, and a Fine
Tuning knob on the right side.

>> wavelengths in distance.

The selective fading results because of multiple paths from the
transmitter site. With multiple signals at slightly different
propagation paths, you can get a very sharp cancellation effect which
moves around as the delay paths change by 1/4 of a wave or so.

It's observable by anyone listening to a MW AM station just outside the
service area at night. That's where you'll hear nearly equal strength
from the skywave signal and the ground wave signal. They'll often
cancel each other out at the carrier. This results in a very distorted
sound from an envelope detector.

> time.

Let me suggest using identical antennas spaced at some multiple of 1/2 wave apart, preferably starting at 3/4 of a wavelength or more away from each other. In other words, 3/4 wavelengths apart is good, 5/4 wavelengths is good, etc... Use the same lengths of coaxial cable to each antenna. Then you'll have a decently identical array, offset by 1/4 wave. You probably shouldn't have the antennas at 1/4 of a wave apart because you might radiate enough LO from one receiver in to the other to cause problems.

Your receivers ought to have a switch for turning off AGC; however, if you don't have that, you could just turn up the RF gain so that the AGC doesn't have any affect.

Ideally, both receivers should be tuned from the same VFO. However, with envelope detection, this isn't really a big deal.

This method will work particularly well with Active antennas. Two Active antennas spaced apart by 3/4 of a wave should yield good diversity. It will also have a nearly identical omnidirectional patterns, which should help when trying to cancel out multiple paths. The key to understand here is that when one spot has a null on the carrier, the other place will have constructive interference.

20,000 Reward Offered to Expose the Conspiracy

I am making a pledge for information directly leading to the exposing of the "BBC Newscaster
Conspiracy". The exposing would specifically need to lead to a legally binding admission from Martyn Lewis
or Michael Buerk of the BBC they they were watching me through the TV set.

I would be happy (delighted, in fact) to pay GBP 20,000 sterling in reward for the above admission.

I know that Bob sometimes reads the postings in this group. I can understand his decision to withdraw the program, shut down the Website and close the Yahoo support group. The grumbling in the Yahoo group was getting out of control and even though he kept releasing new maintenance versions and trying to help folks with problems, the whining continued.

Bob, I want to thank you for a great program and adding the code to support my Kenwood R-5000. I will continue using it until the external database formats (HFCC, PTSW, Eibi etc.) change to the point that I can't load them anymore. Wishing you good DX and hoping one day there will be an announcement that SWLog is available once again.

This weekend is the annual St. Joseph, MO. hamfest!
It is just north of K.C. on I-29 at exit # 47 at the Holiday Inn.
The event starts around 8 am saturday (around 6am for flea market set up).
It is a wonderful show that is growing better each year so load up all your
gear and come sell it this saturday.
There will be all kinds of vendors selling new radios, antennas, and all
kinds of ham radio products.
See your there!

The answer is multi-path signals sum or cancel based on phase as I wrote
here:

"Phase cancelation is a frequency dependent phenomenon and the
modulation scheme or part of it does not matter.

When phase cancelation is narrow and right at the carrier frequency
then the carrier level goes down where the rest of the side band signal
is still good."

This is called selective fading.

This is not an absorption or refraction problem.

If the carrier is effected, the odds are signals nearby (i.e. the
audio) will be effected. I still stand by the statement that the only
advantage to sync demod is that you have cut the bandwidth in half. I
never bought the "fresh carrier" story.

> K8VT

If the selective fading is as tight as you indicate, then there would be "holes" in the audio spectrum of the recovered AM, much like a comb filter. Sync demod won't fix that problem.

There are too many people that think sync demod will cure everything. It's just not true. Now if you have a nearby signal bleeding into the desired signal, then pick the sideband the furthest away from the interfering signal. Here, sync works great. If you have fading, you can narrow band the signal by using one sideband. It helps a bit, but the signal will still fade.

All this assumes your sync is decent, and not a growler. Otherwise, all bets are off.

1669. MI5 Persecution: Toronto Freenet supports free speech (4387)

Newsgroup: rec.radio.shortwave
Date: 2007-01-19 03:48:01 UTC
From: MI5Victim@mi5.gov.uk
Message-ID: <m07001904422406@4ax.com>
Source record: 103770
Cross-posted to: mailing.freebsd.cvs-ports,alt.cellular.sprintpcs,rec.radio.shortwave,be.burgerrechten,alt.pictures.erotica.longlegs

Despite an orchestrated campaign of attempted censorship by UK-resident newsgroup readers, TFN did not bow
to demands for a suppression of freedom of speech. TFN general policy on the matter is as follows;

Draft Policy on Account Deactivations due to News Group Postings
==========

News group postings occasionally take the form of a message which goes against the "topic" of the conference.
For example, a derogatory message about Canadians in the soc.culture.canada.

Members of such news groups then may send a message to the system administrators asking that a user's account
be terminated because of such posting.

The Toronto Free-Net Board of Directors has taken the position that the only postings that will get a person's
account terminated is material that is illegal under Canadian law. Otherwise, the Toronto Free-Net will not
take any action.

Freenet Executive Director Mike Anderson had this to say regarding the continued attempts of a minority of usenet
participants to have my account on his system deactivated;

The TFN's policy is not to take action against members unless they contravene the Criminal Code of Canada, or
engage in practices such as forgery, attacks against other computer systems or mailbombing.

Mr. Corley, while possibly being very annoying, has not contravened the TFN's policies. The TFN believes strongly
in freedom of expression, while recognizing that the price for such freedom may be a high signal-to-noise ratio in Usenet.

If Mr. Corley breaks the law, we will take action -- until then, he has the same rights as any TFN member to post
to Usenet newsgroups. Actions such as mailbombing the TFN in protest will be met by strong complaints to the
originating site's postmaster. The best defense against unwanted postings may be simply be to ignore them and deny
the poster an audience.

TFN Executive Director Toronto, Ont CANADA

Personally, I find it gratifying that my contributions to usenet discussion are recognized as being conducive
to a high signal-to-noise ratio by their quality and thoughtfulness.

For diversity reception you "switch" to the best signal instead of
mixing them together.

The best approach is two antennas with plus 1 wavelength between them
into two separate receivers and switch the audio between them based on a
decision circuit looking at both radios AGC voltage.

Actually, I thought many of Ms. Moret's comments about Edward Teller (aka, Dr. Strangelove) where quite funny.

He was a "total failure...gross, uncouth, absolutely disgusting person...nobody liked him," according to Ms. Moret. LOL :-) :-)

No, it is called selective fading, and it is a real phenomenon.
You can think of the two sidebands for AM as creating constructive and
destructive interference with the carrier. Any time the sideband
energy exceeds the carrier energy you get the equivalent of over
modulation. DSB and an envelope detector isn't a good combination.

As others have pointed out, what Synch detection does is to insure
that the sideband energy can never exceed the carrier energy. While it
is preferable to have it in phase, which a synch detector does, in
human speech, phase carries no information. As a result SSB can be
used to communicate. A product detector (which is used for synch
detection) simply produces phase distortion if the local carrier isn't

in phase with the original carrier. The phase distortion is a fact of life in SSB-SC communication. If you Independent side band, and generate the two independent side bands at quardrature, it is possible to determine, and lock the local carrier in phase with the original carrier.

If sync' detectors are only good for selecting the best sideband, how do
you explain the fact that the audio distortion caused by selective
fading can almost completely be eliminated with a good sync' detector?

Yes, with the right source material you can hear it. While a sync detector can't recover content that isn't there, its strength is reducing the distortion that is present when the carrier level drops below the modulation. If you are recovering both sidebands, then the 'holes' will probably not be at the same frequency and that would limit the effect.

>
> There are too many people that think sync demod will cure everything.
> It's just not true.

True, you need to understand what the sync detector does and what its benefits are. If you have access to a radio with a good spectrum scope (WinRadio G3 series) you can see selective fading real time.

Other means are available to get similar results, although a working sideband selectable sync detector works great

> If you have fading, you can
> narrow band the signal by using one sideband. It helps a bit, but the
> signal will still fade.

If you are talking about fading of the entire signal, a sync detector is not the solution.

>

Hi,

I would recommend reading the diversity section of "Communications Receivers: DPS, Software Radios, and Design, 3rd Edition" by Ulrich Rohde, Jerry Whitaker.

Generally speaking, mixing the inputs is helpful but not as good as actively switching in the stronger signal.

This is somewhat more complex unless you have two receivers.

Sure it is. As a matter fo fact, he probably was a bit liberal on
the 50 parsecs. More like 150.

> but of course you don't even know what a parsec is most likely

He's probably more familiar with a parsec than you are with
honesty.

I was thinking since my redsun is basically DOA (I'll take it apart maybe....) that I'd get a new 1103 and attach speakers to it. Anyone ever try it and compair the sound to a larger radio? Would the AC for speakers interfere with the reception at all ? Thanks

The article is misleading to say the least. First of all the idea that there's 70 million sets without cable or satellite is one thing but people have more than one tv in their houses these days...Anything being sold from I think the middle of this year as a tv must have a hdtv tuner...so your looking at about a 18 month span of anything new would be OK.

Analog tv for the most part over the air looks like crap. I know a few people that have/rely on it but that's largely because they couldn't afford cable/satellite. I know many that just get the basic cable for decent reception...

There's no realistic way someone can tell me that 70 million analog sets mean 70 million people will be shut off from tv...the way to tell if someone has satellite is to see the dish...there's no way of telling if someone has cable or nothing at all (granted they could have a indoor antenna)

I think the really count on analog viewers is around 6 million or 2% of the population. If people are cut off they can

1) get cable

2) get satellite

3) get a dvb receiver and dish if they won't want to pay subscriptions

4) download video ...vodcasts?

5) listen to radio

If this cut off was say 20-30 years ago then yes that would be a problem but since hd keeps going down in price and there's so many other ways of getting programming the problem will be nil.

The 2 receivers part is not an issue. The one thing I have more then
enough of
is receivers. To do this right I will have to tap the AGC off both
receivers, feed
a comparator and use the comparator to select the strongest signal.

This was basicly an attempt to follow up on some comments by D Peter
Maus
about a "simple" diversity setup he had once that used multiple
antennas feeding
one receiver.

D Peter Maus' discription from another thread:
"Each antenna was connected to an RF preamp with a gain of 2-6db.
The outputs of the preamps were combined through resistive pads (for
isolation) into the RF input of the BC-794. The result was nothing
short of amazing, with fading distortions dramatically reduced, and
program listening, was quite pleasant. Even my wife was no longer
critical of SW listening."

My Mini Circuits ZFSC-2-1 has been tested and found to have better
then 25dB isolation from 250KHZ to above 30MHz., with less then 3.5dB
loss so I could dispense with the preamps. It only "cost" me an couple

of hours and I was able to listen during the test. The only time
"wasted"
was the few minutes spent spooling out my field antennas and pushing
a ground rod 4' in the ground. Not the best gorund, but good enough
for
some quick tests.

It is clear the idea has merrit, but it is also clear that to be effective and
more then a toy some serious design work will be needed. Since I already
have too many projects under way, this one will go in the big dream book
of ideas that I hope to pursue when I retire.

Terry

1687. Parameters and Folded dipole question...

Newsgroup: rec.radio.shortwave
Date: 2007-01-19 14:29:00 UTC
From: camelot <scosmo@tiscalinet.it>
Message-ID: <1169216940.520263.277740@38g2000cwa.googlegroups.com>
Source record: 103785

Hello,
I'm new in antenna simulation world and I would like to ask you some questions on some topics. I hope someone could help me.
The first question is if it is true that Directivity, Gain and Efficency of an antenna are simply tied to the her topology and not to the goodness of the matching network or the source impedance, i.e, if I have to measure these values, should I necessary verify that the antenna is correctly matched with source?
Second (and last!) question, I have to simulate a folded dipole with a ground connection in the center (necessary to the supplying chip as ground reference). The structure had hence 3 ports. My question is if a inductive or capacitive load connected to the middle virtual ground port(and the chip) can significantly affect the matching and other parameter (D,G) of the port. In few words, that third branch connected to a virtual ground, how influence the antenna behavior?
Sorry for my trivial questions but I'm continuing studying in order to fill my gaps.
Regards,

Camelot

> Telamon
> Ventura, California

<http://www.radioblvd.com/DiversityDD1.html>

I find the: "At first the engineers speculated that radio waves were
being refracted
in the ionosphere at different angles and therefore some waves would be
intercepted
by an antenna while other wave-angles would miss the antenna. A large
multiple
antenna should capture more wave angles and reduce fading. Actually,
they found
the opposite happened. Fading became worse with larger antenna arrays.
"
to agree with my experience in the much shorter active dipoles (~3' per
leg) worked
much better then the 50' wire antennas.

In hindsight it might have helped if some kind of moderation were introduced. The main shortwave.com website has been pulled but if you look deep enough you will find the community feature is still there. So are the online receivers if you check your remote radio client.

I'll continue using it, I decided to not to be an "early adopter" of V5 so stuck with build 2411. Fortunately I still have a copy of the installer, but I can't put it up on the web as Bob has requested that all mirror sites be removed.

Hi Gang,

I am looking for an SGC model SG-235 500 watt antenna tuner/coupler.
If I can't locate an SG-235, I would be interested in an SG-230.

If you have one you are interested in selling, please let me know.

Thanks,

Bill

1724. The Cultural Left and Its Responsibility for 9/11

Newsgroup: rec.radio.shortwave
Date: 2007-01-19 22:03:38 UTC
From: "del.icio.us." <aim@their.org>
Message-ID: <12r2g65lsasv134@corp.supernews.com>
Source record: 103673

The Enemy At Home:
The Cultural Left and Its Responsibility for 9/11

"In this book I make a claim that will seem startling at the outset. The cultural left in this country is responsible for causing 9/11. ? In faulting the cultural left, I am not making the absurd accusation that this group blew up the World Trade Center and the Pentagon. I am saying that the cultural left and its allies in Congress, the media, Hollywood, the nonprofit sector, and the universities are the primary cause of the volcano of anger toward America that is erupting from the Islamic world. The Muslims who carried out the 9/11 attacks were the product of this visceral rage?some of it based on legitimate concerns, some of it based on wrongful prejudice, but all of it fueled and encouraged by the cultural left. Thus without the cultural left, 9/11 would not have happened.

?I realize that this is a strong charge, one that no one has made before. But it is a neglected aspect of the 9/11 debate, and it is critical to understanding the current controversy over the ?war against terrorism.? ? I intend to show that the left has actively fostered the intense hatred of America that has led to numerous attacks such as 9/11. If I am right, then no war against terrorism can be effectively fought using the left-wing premises that are now accepted doctrine among mainstream liberals and Democrats.?

Whenever Muslims charge that the war on terror is really a war against Islam, Americans hasten to assure them they are wrong. Yet as Dinesh D? Souza argues in this powerful and timely polemic, there really is a war against Islam. Only this war is not being waged by Christian conservatives bent on a moral crusade to impose democracy abroad but by the American cultural left, which for years has been vigorously exporting its domestic war against religion and traditional morality to the rest of the world.

D?Souza contends that the cultural left is responsible for 9/11 in two ways: by fostering a decadent and depraved American culture that angers and repulses other societies?especially traditional and religious ones? and by promoting, at home and abroad, an anti-American attitude that blames America for all the problems of the world.

Islamic anti-Americanism is not merely a reaction to U.S. foreign policy but is also rooted in a revulsion against what Muslims perceive to be the atheism and moral depravity of American popular culture. Muslims and other traditional people around the world allege that secular American values are being imposed on their societies and that these values undermine religious belief, weaken the traditional family, and corrupt the innocence of children. But it is not ?America? that is doing this to them, it is the

American cultural left. What traditional societies consider repulsive and immoral, the cultural left considers progressive and liberating.

Taking issue with those on the right who speak of a "clash of civilizations," D'Souza argues that the war on terror is really a war for the hearts and minds of traditional Muslims—and traditional peoples everywhere. The only way to win the struggle with radical Islam is to convince traditional Muslims that America is on their side.

We are accustomed to thinking of the war on terror and the culture war as two distinct and separate struggles. D'Souza shows that they are really one and the same. Conservatives must recognize that the left is now allied with the Islamic radicals in a combined effort to defeat Bush's war on terror. A whole new strategy is therefore needed to fight both wars. "In order to defeat the Islamic radicals abroad," D'Souza writes, "we must defeat the enemy at home."

The 1103 speaker on its own isn't bad given the fact it's an $80
radio, but I respectfully disagree with the above; I've used the 1103
as a stereo tuner run through an amplifier and it sounded excellent-
no hum or static on FM and more than adequate on AM, And I have a
pair of Klipsch Pro Media 2.0 speakers hooked up to the line out on
the 1103 and, given the setup, is hard to beat for price and
performance.

1730. DE1121 FAQ now online--includes airband hack

Newsgroup: rec.radio.shortwave
Date: 2007-01-19 23:42:30 UTC
From: simart@gmail.com
Message-ID: <1169250150.215006.279130@11g2000cwr.googlegroups.com>
Source record: 103679

I'm compiling a FAQ for this idiosyncratic radio:
http://simart.googlepages.com/faq.html. There's an interesting way to
get airband frequencies 129.92-130.04Mhz using the memory presets. This
is a fun radio, but it's different. Duncan Ross posted a brilliant
review on the KA1121_DE1121 yahoo group, and I love these quotes:

"Despite being easily the better receiver, the DE1103 is plain and
dull. The newcomer [DE1121] is fiddly, frustrating and slightly less
capable but much more fun to use in a masochistic way and the station
names and unattended recordings make all the difference."

"If the DE1103 is the DXer's friend, the DE1121 is it's idiot little
brother that can't be relied upon but knows all the girls. Buy one."

But the audio spectrum comes pre-equipped with a lot of holes* so there
is some benefit, as sometimes it's unimportant frequencies that are fading
out. (*That's why MP3 type psycho-acoustic compression can work).

>There are too many people that think sync demod will cure everything.
>It's just not true. Now if you have a nearby signal bleeding into the
>desired signal, then pick the sideband the furthest away from the
>interfering signal. Here, sync works great. If you have fading, you can
>narrow band the signal by using one sideband. It helps a bit, but the
>signal will still fade.

I find that there's a number of signals where (as close as I
can get to) sync detection (by zero beating the BFO in SSB mode)
cleans up the audio to the point where it's listen-able. Typically,
these are weak and fluttery high latitude path signals, Europe to
Western North America.

Yea, really. And what the heck does DEGEN mean? KAITO? I think a
CUHULIN radio would probably be very nice, everyone would like it AND
IT Would sound very pleasant too.

I run my Kaito into a cheep pair of computer speakers and the setup
sounds AOK. It's not a Mark Levinson, but it sounds pretty darn good.

My guess(es) would be 1)to discourage spammers & 2)to discourage boneheads, which, given the reason for pulling this absolutely excellent software, website & yahoo newsgroup that's been around since what, the 90's, I'd say are damn good reasons to finally have a moderated group. Besides, have you read the crap that gets posted to this NG? By far the majority of the postings have absolutely nothing to do with SWL at all & are posted by juvenile minded boneheads trying to create ripples so they feel important.

Check this out:

"The Degen version costs about $65 delivered from China, while the
Kaito version goes for around $110 here in the US. The Eton E5 is
priced at $169.95 and is generally available for about $150."

http://www.radiointel.com/review-etone5.htm

These are all, basically, the same radios - I would get the Degen, at a
fraction of the price of the Eton. I believe, the Degen does not come
with a US warrenty, so if it breaks, it may be harder to get a
refund/exchange - but if it does break, then justt order another one,
or get two, for less than the price of the Eton.

Yes, if you sum the output of several antennas on over the horizon
signals you could end up with greater fading.

One antenna with a greater cross sectional area should have less fading
than say a small amplified antenna.

Diversity reception can also be achieved with two antennas in the same
location with one having vertical and the other horizontal polarization.

Hey brisco:

I bought an Eton E5 about a year ago and I love it:

* Great sound
* Easy user interface
* Powerful shortwave and AM reception (I don't use FM much...)
* Nice size
* Provides good battery life
* Good clarity on SSB (better than my Kaito KA1102)
* Sturdy construction

If the price is okay for you, then this is a fine choice.

Once you get the PAL to F adapter, you can run RG6 (CATV coax available at Radio Shack) to your antenna. The impedance of a random wire wire varies considerably over the shortwave spectrum so you shouldn't worry too much about impedance matches, but a 4:1 or 9:1 balun or matching transformer between the antenna and the coax will help things some and will allow you to put a ground to earth right near the antenna. You could also put a 1:1 transformer between the coax and the radio and that will help to keep down any common mode noise that may be picked up by the antenna coax.

1761. Radio Mart.....again

Newsgroup: rec.radio.shortwave
Date: 2007-01-20 09:51:45 UTC
From: Pete KE9OA <p.gianako@comcast.net>
Message-ID: <3tSdnYeXNqK2eyzYnZ2dnUVZ_oytnZ2d@comcast.com>
Source record: 103809

I was looking through eBay for Drake equipment. Radio Mart had a 1994 model SW-8.....he represented this unit as a very late model. Tonight, he has a Drake SPR-4 with a S/N of 562, which he states that he knows this to be a very late model.
SPR-4s were run into the high 5000s or low 6000s. He is selling one of the earlier units. No big deal, except that the later models used glass epoxy boards, and they used silver mica caps in the front end on the LW range. I have had a couple of those earlier units, including one that was purchased brand new. The earlier units were pretty deaf on the LW range, unless you used the loop antenna.
True, he does give a good presentation, but he gives out misinformation with the authority of an expert. I wonder how many folks fall for this gibberish. No problem in stating that a unit is in mint condition if it really is, but to state that a low S/N unit is a very late iteration is outright lying.
I gave him the benefit of the doubt, and I did ask him if maybe somebody had misinformed him about how late in the product life cycle these units were actually made. I am not sure if I will hear from him or not. Always good to do some research and be prepared before bidding on eBay.

Pete

He does have an R7 up currently at $610 (that he purchased as 'Gottahaveit' for $520, I don't know how he does it) that originally was listed as having a bad readout segment. He said it was merely a bad solder joint, and was fixed. I told him we'll wait and see what the feedback brings.

The E5 is a very good first receiver and great for portability, so you will always have a use for it. Although the Degen/Kaito versions can be cheaper (Degen esp), if you have any problem, shipping costs will wipe out the savings. Also, and IMO an important factor, the ergonomics or user interface of the E5 is vastly improved over the Kaito/Degen versions.

I got mine through Amazon.com from a partner vendor for 125-126, shipping included.

Shipping costs are, $150 minus $65 = $85 ? I don't think so ! The
improved ergonomics is not worth paying the extra 85 for the Eton -
that is why, I suggested ordering two, for less than the price of one
Eton. These radios, are virtually the same - let's not be misleading !

Here are reviews, for the excellent Degen 1103:

http://www.eham.net/reviews/detail/4288

Don't believe the poster, who suggested that shipping costs wipie out
any gains, saved by buying the Degen, over the Eton - he is just a poor
sap, who payed way too much for his Eton, and could have gotten two
Degens, for the price of his one Eton.

Here is a Degen 1003, on ebay.com:

http://search.ebay.com/de1103_W0QQfkrZ1

As you can see, shipping is just $25, and the radio is just $50. If
you order tow, they probably give you a break on the shipping.

Most of Ms. Moret's comments were mere descriptions of Livermore
Nuclear Weapons Lab. She gave her *opinion* of Edward Teller, an
opinion shared my most scientists, and she said that Karen Silkwood was
murdered by Wackenhut, a view also shared by many people.

> information,plz help to me..

At the very least, one would need the type of receiver and the microprocessor it uses to help you. For the actual work, both a service manual for the former and a datasheet for the latter would be of use. An example for a modification of a home FM tuner can be seen here:
http://www.dxradio.co.uk/sony/
This is a bit more involved already. A number of tuners have proprietary remote control inputs, which may also be worth a try provided one can figure out (find) the accepted control codes.

Google for Long wire balun or Magnetic balun and look around. The
antenna typically ties to a terminal on the balun, there's usually a
ground connection and a coax connection to run back into your house.

I prefer not to deal with Ebay unless it is local enough to pick it up.
I have a problem shelling out over a grand without seeing the unit. I
range from DC to North Carolina to New Hampshire, and as far west as
Ohio. There are a few here on the board that I would trust - So if you
want to part with one of yours then let me know. I'm actually working
for Harris RF now so a 590A wouldn't be so hard for me to get hold of,
but I miss my R8B a lot.

Well, I rarely use the one I currently have, preferring to use the R8 and/or the R7. Though at times I'll fire all 4 up at once. Shop around eBay and you'll come up with one at a decent price.

Universal radio had an R8B listed on their used list updated yesterday.
It has probably been sold already but you could call & ask. They close
at 3:00 PM EST I think.

Their prices seem to be on the high side for Drake or JRC equipment as
the market seems to support that..... but if you want one they get them
fairly often.

Thanks for the kind words. If you read my post, I said if there was a problem with the radio, the shipping would wipe out the savings. You do the math. Radio + shipping = 75. If a problem, shipping at 25 each way =50, total = 125.

I paid precisely $125.48 including shipping for my E5.

That's my opinion and is the only one I have.

The Degen is fine, and if you have no problems, you save $50.

Again, in my opinion, the digital readout and real volume control, etc of the E5 are important improvements. You got your best value with the Degen, and I got my best value with the E5. Why not just leave it at that?

Dear Poor Sap:

These are all cheap plastic, throw-away radios, so that is why, I
suggested he order two off ebay, for $130, for the same cost, as your
one Eton. It is not like, these are quality SW receivers of the
70s/80s, such as, the Sony ICF-SW2010 and the RS DX-440 ! NO, I guess,
we can't "just leave it at that" ! :-)

I did see that R7. There is a fellow in Germany that has replacement
display modules for the 7 Line. I replaced the display module on my R7, and
used 560 Ohm current limit resistors for the display. This keeps the current
down and greatly extends the life of the displays. I think that Drake is
using something like 33 Ohm resistors with the original display module.
I am not sure how he gets things for those low prices either. He did e-mail
me back this morning, explaining that instead of relying on his staff he
needs to do his own research on the items he sells. I don't
know.....maybe he sells so much that he just doesn't know.

Hard to tell.....as I stated in my reply to Dx Ace, he was nice enough to reply to me this morning. I'll give him the benefit of the doubt.
I have been doing ok with eBay purchases lately. The key has been going for not so expensive units. I was looking at a Swift M4000D microscope the other day. I entered a maximum bid of 235 dollars. Somebody else won the item for 265 dollars. He wanted it more than me, so he did deserve to win the item.
Radios are another story. Every radio that I have purchased from eBay have needed some sort of repair. I purchased a Drake TR7 a few months back. When I went through the alignment of the BFO injection frequency, I noticed that the amplitude of the BFO was low. I also noticed that RF output on anything above 40 meters was low. I traced the problem to a cold solder joint on the reference oscillator board. After I repaired the unit, the TR7 was putting out 260 watts of power. Evidently, somebody tried to compensate for the lower power output by disabling the ALC circuit.
When I e-mailed the seller and explained the repairs that I had done, he proclaimed "oh, I was wondering why I had to turn the mic gain up much higher than my other rigs".
Conveniently, no microphone or power cord was included in the sale, but he did include the Cinch-Jones power connector.
I already had a PS-7 power supply, so this wasn't an issue.
Then, there was the Drake SW-8 that I purchased from a hamfest. The seller was "selling it for a friend", so he didn't know too much about the item. He was nice enough to include batteries with the unit, but he didn't bother to tell me that the electrolytic capacitor in the wall wart had exploded and that there was 3V of ripple in the output.
This caused the internal bulk electrolytic capacitor at the power supply input of the SW8 to fail. Too much ripple voltage caused excessive internal heating of electrolytic caps, unless they are specified as the high ripple types that are used in switching power supplies. Other than this issue, and the fact that the LCD had some missing segments, the radio was perfect.
Actually, the LCD issue is common. You need to remove the LCD panel itself and clean the rubber strips that interface the panel itself to the main display board of the SW8.
I know that many folks on this NG have had good eBay experiences with receivers, and I am happy for those folks!

That's true. But you can cause the item to be bid up further than it
otherwise would have by doing so. I use a bidding program just so I don't
have to be around or do it myself. I can be at work and all the things I'm
intrested in get bid on.

I have also noticed these sellers. It seems to be some sort of franchise, similar to the UPS Store. There are at least two of them in the Chicago area. What you do is go to the store and bring in your items. They photograph the items, write up a description, and post it up on eBay for you. I guess you can call it a consignment store.

Hello everyone and happy New Year! This is my first post here, and I'm quite sure it wont be my last.

I am very green to this hobby. I have always been fascinated with DX radio and finally have the time and money to get involved in it. I started BIG. I just bought an R8B for my first receiver. I live in a small condo in Northern Arizona (Flagstaff) I am surrounded by tall mountains and the elevation at my house is 8,200 Feet.

I am looking for the best antenna for my buck at around $200.00. My main listening interests are utility stations. This antenna must be able to withstand winds of 60 mph +, and not be too much of an eyesore.

Any feedback will be greatly appreciated.

Chad

Have you ever been to New Jersey??

It is already fairly well devastated.
:-)

Sounds like you're looking for an outdoor antenna, which is good.

How much space do you have to work with? Are you looking for something
that would go on your roof or on a balcony or do you have some real
estate to play with?

The simplest and the best are wire antennas outside of your building for
this frequency range.
Home brew isn't a problem with a minimum of fees.
Hang a wire between to points with a maximum length.
You will find some suggestions in the net.

Regards,

Ralf

hi,

i recently purchased an very nice drake r8 my choice over the icom r75 - i don't regret my decision one bit - a great radio and along with my palstar one of the best i have owned and i have owned a few. my question is will an r8a buy me much more in terms of better DX and audio, sync detection etc. i have heard the build quality is a bit better on the r8 and also uses the original drake decoder that was used in the R7. besides these things, will the r8a buy me much more?

thanks in advance, john

Several questions come to mind.
What are you interested in? I am mainly into utility and pirate(6.925)
Are there any local, within 5 miles, MW, AM BCB, stations?
What is your technical skill? Can you build equipment from a diagram?

Terry

Your a riot, CW is as out of date as smoke signals or beating on drums to communicate.
Welcome to the 21st century, through mans existance we have always looked for better
ways to communicate, telegraph was replaced by telephones, spark gap transmissions were
'replaced' by 'phone' service in 2 way radios, AM modulation was replaced (pretty much)
by FM modulation, and now is transitioning to digital.

Sure your 'free' to use CW to communicate (to whowever will still have the outdated skills to
do so in the near future), you are also 'free' to drive a horse and buggy to work, and use an
outhouse if you so desire. Just don't 'EXPECT' the rest of the modern world to hold on to
your outdated and archaic ideas.

1827. Why are cables and connectors usually 50 ohms?

Newsgroup: rec.radio.shortwave
Date: 2007-01-21 00:33:07 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>
Message-ID: <telamon_spamshield-B19A07.16330720012007@newsclstr03.news.prodigy.net>
Source record: 103726

I always thought it was because the impedance of basic antennas are around 50 and 75 ohms. Here is another story I came across.

"In the United States, the predominant impedance for coaxial transmission lines and connectors is 50 ohms. The theoretical impedance for minimum attenuation is 77.5 ohm and for maximum power transfer it is 30 ohms. The average of these two impedances is 53.75 ohm or rounded off to 50.

Therefore, 50 ohm is a compromise between minimum attenuation and maximum power transfer in a coaxial transmission line, and that is why it was selected. There are connectors available with other impedances, the next most popular impedance being 75 ohm (approximate minimum attenuation performance) that is in fairly wide use internationally and in long line communication systems."

75 ohm cabling is also often used for video applications.

The R8B is a much better upgrade than the R8A. The B version has
sideband selectable sync.

> Telamon
> Ventura, California

All single ended video (NTSC, PAL, SECAM or ATSC) systems that I have
seen
or read about are 75 ohms.

New AES/BEU coax is also 75 ohm.

Older, and increasingly rare, balanced video is 150 Ohms. Twinax.

As to the why, inspite of 4 years of college and 30 years in the trade
I have
never heard a convincing story about the "why".

In the real world of HF receivers I have never been able to detect any
difference
between 50 and 75 ohm cable. I also have not ever seen a modern radio,
since say 1970, that has anything like a 50 ohm input impedance. Most
are at least twice that or 100 Ohms and many are closer to 300 and this
changes with frequency.

This link makes the most sense in that the math is at least correct.

Not really. I was happy to sell it to the guy who bought it. He wanted it and I made him a fair deal. I might even visit my old radio one day in New Mexico when I get to finally make that trip down old RT 66. I sawed my damn thumb off, with a Ryobi table saw, the day I was supposed to leave in September so I've had to postpone the trip. And anyway you've heard the saying that you don't know what you've had till it's gone. I'm thinking that this is one of these cases. So I'll find another no problem. Reason I mentioned it here is because I would trust (most) people here way more than an unknown person on Ebay. Ken's Idea for Universal radio might work too, but I won't be able to buy radio for a couple of months. So please keep me in mind if anybody knows of one coming up for sale.

Would some of you receiver experts that lurk here please explain to me
why the selectable SYNC on the R8B is any differient than using the PBT
while in SYNC on the R8A.

Now a receiver that had a limited PBT range ie.. JRC I can see that it
would not give true USB/LSB shift. But on the R8A the PBT will cover
more than the 3khz bandwith on each side band.

Take 5.070 mhz now at 02:18 utc. There is a a pinging sound on the USB
side but not on the LSB. I engage the SYNC in AM mode 6khz filter & I
hear the ping with the PBT set to 12:00 oclock setting. If I slide it
slowly to the Left or the LSB I do not hear the Ping. If I shift the
PBT to the right or the USB & the ping is there.

Is this not the same as selecting USB or LSB on the R8B SYNC ?????

73, Ken

With PBT, the ability to attenuate the unwanted sideband is limited by the skirt selectivity characteristics of the filter.

With selectable sideband sync detectors, the unwanted sideband is cancelled by the circuitry. This can be significant if the detector is well tuned.

The two are not the same.

But of course, how much a phasing type circuit attenuates the unwanted sideband is a reflection of how precise the components are, and how well balanced the circuit is.

And one reality is that "sync detectors" came into common use in relatively low end receivers. Before the Sony 2010, I can't think of any receiver that had a built in sync detector. The advantage in that and other low end receivers is that it does allow "narrowing" the selectivity without the cost of a filter. It is cheaper to use some passive components and an IC than to add a good IF filter.

To make a fair comparison, one actually has to compare the receivers, rather than compare techniques. Because while passband tuning does indeed reflect on the skirts of the filters used, phasing-based selectible sideband depends on the components and circuitry used.

Once you start paying for a receiver out of the portable category, chances go up that the filters are better than run of the mill ceramic filters, which means their passband tuning may be fine. (And I actually can't think of an instance of passband tuning in a cheap receiver.) On the other hand, there are lots of relatively inexpensive receivers with not so great ceramic filters that do use the phasing method to get selectible sideband, and since those are lower cost receivers, one might wonder how good the phasing networks are.

Fifty years ago, people would buy phasing type SSB adaptors for their receivers. They wanted an actual product detector, rather than the "envelope detector" that came in their receiver, because SSB was coming in and they wanted to adapt. The selectivity of the receivers were often limited, because they'd been intended for AM reception. So an ssb adaptor with the phasing method allowed for improved selectivity with relatively low cast and no need to modify the receiver (other than adding a point to connect the adaptor). But nobody claimed this was better than a good IF filter in the receiver.

The Eton/Tecsun/Grundigs and Degens are all Chinese-made - especially, the Grundig S350, probably the worst cheap plastic box SW radio ever made. You are just jealous, because he can get two Degen 1103s, for the price of one of your Eton E5s. Check out the writeup for the S350:

http://www.radiointel.com/results2.htm

You, were foolish, for letting yourself get riipped off, buying the E5, when you could have bought two 1103s, and had one as backup, or could have kept it new-in-the-box, forever.

Maybe, if the over-priced Eton E1 came with an internal ferrite-bar antenna, you wouldn't be having these problems. BTW Bob, the Eton E5 is way over-priced, too - you could have gotten two Degen 1103s (same radio), for the price of one Eton E5.

> This link makes the most sense in that the math is at least correct.
> <http://www.edn.com/article/CA60931.html?1=1>

This paragraph in the article you quoted:

"A half-wave dipole in free space has a feed-point impedance of approximately 73 Ohm. A quarter-wave antenna with a ground plane has a feed-point impedance of approximately 37 Ohm. A compromise between the two, ratiometrically, is 51.97 Ohm, which produces an SWR of 1.404-to-1 either way.--James C Bach"

is my rational since when connecting antennas to coax the impedance need to match.

There are people that are totally retarded that don't know how to
observe empirical data and draw the right conclusions. Morons observe
what is right in front of them and pull from thin air the wrong
causation.

PBT is similar in result to using side band selectable sync but the sync
is generally more effective.

Just turn them off or you might try turning them all the way on. The
power is pulsed to the lights when the dimmer is between off and full on.

What frequencies are you trying to get at night? Every night between
12000 kHZ and 30000 kHZ there is no reception because the sun has gone
down. At which time stations between 1800 kHZ and 12000 kHZ come in. As
far as the buzzing and humming it sounds like you have fluorescent
light fixtures and TV interference. Also
you could be getting AC line interference. The solution is to turn off
the lights or find another place in the house. Also I've found that if
your random wire is to long it will receive to much RF and overload the
front end of your
receiver. You will need to experiment with wire lenghts and not so much
wire types.
It's funny you mentioned you have an Eton E1,,,, I have an Eton
E5 and also listen to Radio Taiwan on
5950 kHZ around 200 UTC. I have found that using a piece of lamp cord
about 7-8 feet long works really well.
A wrap the bare end around the base of the telescoping antenna, and
bingo. I've had good luck with this setup.

Go to a park away from all the "noise". Dimmers, fluorescent lights,
AC lines. and so many things we don't know could affect
reception.....Good Luck.....Dave, again----------PS. be
thankful your in LA it's snow here in St. Louis.

Source record: 103860
Cross-posted to: rec.radio.shortwave,alt.radio.scanner.flame_fest,rec.radio.amateur.misc

Attention all members of The Great Liberty Net ...

Six weeks from tonight, you will have a new Check-in, courtesy of the no-code rules.

N0VFP will be joining The Great Liberty Net on Feb. 24, as soon as he can pass the test at the nearest VE site.

Tens of thousands of jammers - oops - I mean - SWL'ers will be on hand to greet Mr. Davies on his achievement.

Y-Man will cut his honeymoon with Ms. McKinney short so he can return to the keyboard and give this event the proclamation it truly deserves.

Meantime maybe VFP will give us his qsl address so we can send him a QSL card to commemorate this momentous event.

Too bad Kevin and Loose Orifice and Chicken Fornicator and Arky Bob won't be on hand for VFP's first check-in.

But guess who *will* be there - - Nashville Joe. :-)

42 days and counting till the proclaimer says - - - Gentlemen - start your amps ! ! !

My main interests are same as yours... utility, maritime, aeronautical HF, and pirate. There is an AM radio station 3 miles away. On their site it says it transmits 5,000 watts on 930 khz, but I see no towers at the radio station. I also live a few miles from some microwave towers, and (assuming) cell phone, VHF/UHF TV towers. I am not very technically savy, and would prefer to buy an antenna that is already built. I can assemble it fine and put it up. IN am however very good with diagrams. Size is not much of an issue as long as its not a tower or 10 foot or higher vertical antenna. I'm the manager of the apartment community I live in, so I can bend the rules a bit in terms of roof installation antennae. I'm hearing rave reviews and numerous suggestions about the Wellbrook ALA-1530, but the cost is a big downfall.

In AM mode, listening to an AM station and with the PBT control at 12
o'clock using the 6KHz filter you have 3 KHz of the lower and 3KHz of
the upper side bands. Rotate the PBT control to 3 o'clock and you have 6
KHz of the upper side band and none of the lower side band. You get the
reverse situation when you turn the PBT to 9 o'clock.

The high modulated frequencies are farther from the carrier so you will
hear an improvement in the audio high end when the PBT control is turned
either way from the 12 o'clock position.

It is almost a sure bet that the next miscreant in line after this new rule change will be Roger Wiseman, AB8MQ. He is sure to suffer panic attacks upon hearing his favorite stalkee, Lloyd Davies anywhere on the bands.

Wabbit Wiseman will be between that proverbial Rock And A Hard Place. He will most assuredly break out in a cold sweat as he fights an inner battle to keep his greasy fingers away from his microphone. Roger will doubtless have to forego his juvenile urge to jam Lloyd, and knows full well that he cannot do so because of the recent attention paid him by Riley Hollingsworth.

This will only get better. Enter Mark Morgan, another of Roger's favorites. Should Mark upgrade and make his presence known on the HF bands, Roger will doubtless spin out of control and go into a spittle spewing frenzy.

If Mark continues his stupidity, and he will, and if Roger doesn't take his doctor-ordered Thorazine, and he won't, the coming months should become

very interesting.

The "sync" detector of the ICF-2010 was originaly a gimmick. Sony took the old, tired, IFC-2001 design, clean it up, improved the reception and microprocessor, added air band, but still needed something to really make the radio different than the other 2001 derived radios which were coming onto the market.

By the time they were designing it, AM stereo was a commercial failure in the U.S. Sony had a warehouse full of custom AM decoder chips and no where to put them. One of their engineers figured out how to convert them to a sync detector and put it in the 2010.

It was a great success.

Another story I have heard is that at the begining of WWII, the development of RADAR required a new type of feed line. Coaxial conductors were made of copper pipe. The pipes used were standard pipe purchased at a plumbing store and the ratio of inner conductor to shield was due to avaialble sizes.

It probably wasn't hard to convert as the Kahn-Hazeltine method was ISB.

From: http://en.wikipedia.org/wiki/AM_stereo

"The Kahn-Hazeltine system worked on an entirely different principle which independently modulated the upper and lower sidebands separately to differentiate the difference in program material. If an AM station were broadcasting AM stereo using the Kahn system, stereophonic sound could be partially enjoyed by tuning two standard radios slightly to either side of the station, one to the right side of best tune and one to the left of best tune. The best way to experience the most stereo separation however was by using an AM Stereo tuner with appropriate circuitry for decoding the Kahn system."

Just set the decoder to the mode and pick the left or right output.

I notice that the Russian-born poet and folk singer Mark Belitsky has a new CD, "Radio Luxembourg".. Songs from it were in an HBO movie about the boxer \Nikolai Valuev.

From the title I should guess that the long wave powerhouse had as much effect, with its music not available locally, on Soviet popular culture as its signal had on the ionosphere.

Yes . . .

take your radio outside, truck it around in the yard, find the best
reception area,

put up an antenna there.

then put in a nice shielded co-ax into your house, shielding the whole
thing.

Duct tape is actually a fairly good shield, BTW . ..

Climate change is real

There will always be uncertainty in understanding a system
as complex as the worldï¿½s climate. However there is now
strong evidence that significant global warming is
occurring1. The evidence comes from direct measurements
of rising surface air temperatures and subsurface ocean
temperatures and from phenomena such as increases in
average global sea levels, retreating glaciers, and changes
to many physical and biological systems. It is likely that
most of the warming in recent decades can be attributed
to human activities (IPCC 2001)2. This warming has already
led to changes in the Earth's climate.
The existence of greenhouse gases in the atmosphere is
vital to life on Earth ï¿½ in their absence average
temperatures would be about 30 centigrade degrees lower
than they are today. But human activities are now causing
atmospheric concentrations of greenhouse gases ï¿½
including carbon dioxide, methane, tropospheric ozone,
and nitrous oxide ï¿½ to rise well above pre-industrial levels.
Carbon dioxide levels have increased from 280 ppm in
1750 to over 375 ppm today ï¿½ higher than any previous
levels that can be reliably measured (i.e. in the last 420,000
years). Increasing greenhouse gases are causing
temperatures to rise; the Earthï¿½s surface warmed by
approximately 0.6 centigrade degrees over the twentieth
century. The Intergovernmental Panel on Climate Change
(IPCC) projected that the average global surface
temperatures will continue to increase to between 1.4
centigrade degrees and 5.8 centigrade degrees above 1990

levels, by 2100.

> cuhulin
>

Unfortunately, you can not reliably bid that close to the end. There are propagation delays in the ineternet, and sometimes eBay's servers are busy. Even one second is not reliable. Three seems to work, but allows someone to manually up your bid. EBay does not care how you bid, as long as you bid. Sniping is not immoral, dishonest, or illegal, it is just a technique that sometimes works and sometimes doesn't.

It is in the seller's interest to create a bidding frenzy. It is in the buyer's interest to avoid one. Very detailed ads with lots of photos is the best way to generate that frenzy, but most sellers are lazy. Poor ads with fuzzy or no pictures is the best way to find a bargain, but then some sellers are not honest and deliberately sell junk that way.

I use a snipe engine for a different reason, with it I can enter a bid and if I change my mind before the bid is actually made a few seconds before the end of the auction, I can cancel it. Also I do not have to be hanging over the computer when the auction ends to put in that bid.

Personally, I prefer BIN's as I only have to make an either/or decision, I am lazy too....

1881. Re: Bendix/King ADF-T12C ?

The Bendix ADF-T12-series direction finders are the Bendix
transistorized version of the old Motorola ADF-12. Any General Aviation
radio shop will have a book on this radio. The I.F. frequency is 140
kHz. The schematic set is a bit involved to scan, but the rear panel
Amphenol Blue-Ribbon connector pinout is as follows:
Pin 1 Sense antenna
Pin 2 Loop shield
Pin 3 Loop Input R1 (Tin)
Pin 4 Loop Input R2 (Copper)
Pin 5 Optional Audio Amp A+
Pin 6 Dial Lamps
Pin 7 Tuning Meter (ext)
Pin 8 47Hz switching Phase 2
Pin 9 Ground
Pin 10 Servo DC Output
Pin 11 Spare
Pin 12 47Hz switching Phase 1
Pin 13 Servo DC Output
Pin 14 Headset (500 ohm)
Pin 15 DC In +
Pin 16 ADF Servo Signal Output

The manual set I have is for the ADF-T12D with synthesized tuning. The
12B and C are infinitely more reliable than the D-model.. which is a dog!!!

Good luck with the project. de K3HVG

Let me also add the following... In order for the system to function, one would need the 2321E loop antenna, the special (balanced)loop antenna cable set, and any of the 551-series servo amplifier/indicators. Without these items, one simply has a LF/MF receiver. For listening, simply connect A+, ground, headphones, and a wire antenna to the sense antenna input. Input voltage (12v or 28v) is rear-panel selected. No internal changes are required.

Could be a nearby transformer going sour when the sun goes down. I had one about a half mile away from me that put out all kinds of hash when the sun went down, or when it got below 60 degrees or so. It wasn't horrible when it was warmer out, but when it got cold, wow!

Lightning took care of it one night, after about 2 years of the local power company telling me "It's on the list".

Sometimes "special button combinations" that enable unadvertised, or
unintended features are referred to as "hacks," so I meant it in that,
admittedly loose, sense. And to the best of my knowledge, no one has
tried to extend frequency coverage beyond 30000. I'm guessing that
because of the ability to change the firmware, we may see some
interesting things from this radio in the future.

How did you figure out that transformer was the cause? I have a very
similar problem--horrible RFI when it's _cold_ outside. I figured it
must be a neighbors heater, but now you've got me thinking.

Many of the old tube ADF sets were repurposed for boats years ago and
they did not hold up terribly well especially on salt water. Both the
Motorola/Bendix and King Radio units are very desireable for BCB DXing
today. Avionics shops will sometimes give you them if you ask properly
along with old dynamotors and such.

Hi. I'm reading Daphne Du Maurier's short story "The Birds" right now.
In this story, a family is inside their boarded up house, attacked by
thousands of birds. They tune to their radio and learn that farther
away,in the cities, the population is under attack by hordes of large
birds. These attacks seem to be organized, military, and reasoning.
I'm interested in the radio as a tool of survival in an emergency:
weather, terror, war, epidemic, or alien. What would be some of the
best radios to own as a source of news information and survival in a
time of severe crisis and emergency?

The Degen 1103 is a decent sensitive portable, though the plastic nightstand on the back of mine broke off after six months. This would have never happened with a DX-440 or Sony 2010 which had solid materials. That being said the Degen 1103 is still a good buy.

A 2M ham HT can allow you to monitor the severe WX nets.

A VHF/UHF scanner can allow you to monitor fire and police,
though this is starting to change with digital.

MW and HF allow one to listen to local, not so local and international
news. During the civil war in Jorden the only comms were Ham radio.

After Katrina ham radio also helped with the relief efforts.

There have been several times where a ham radio has saved me
from at best serious discomfort to at worst injury or death. I have
been known to go deep into the Red River Gorge during heavy
snow to take photos. One time I had a starter fail. The temps
had dropped to the mid teens more snow was on the way. I was
very happy my ham radio worked and some friends came to retrieve
me. One of the more foolish things I have done as an adult. While
I did have a sleeping bag and food etc, it would have been a very
long and cold night.

Your question is so open ended that it is hard to present a useful
answer. In truth you may want to visit misc.survivialism where topics
like this are debated daily. Of course MS has the largest number
of net nuts on the web so be warned.

Two indisputable facts:

FACT 1:

Carbon dioxide *IS* a "greenhouse gas". It is simply a physical property of CO2 that has been known for years.

FACT 2:

Ice core samples going back 50,000 years show that the CO2 in the atmosphere is waaay higher than it has ever been...the slope of the curve is almost straight up.

Draw whatever conclusions you wish from the two facts above.

It had this weird pattern to it, it was something like. BUZZZT,
BUZZZZZZZZT, BUZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZTTT! I always thought
it sounded like someone welding.

The last buzz of the three really went a long time. Over and over again.
I was walking my dog one night, and under a transformer that always
loudly hummed, came the same noises in the same pattern. I went home and
got my almost deaf portable AM radio, and it was easy to track it down.
I called the power company the next day, and go the usual BS. It was
worth losing power for a few hours to finally get it changed. I wonder
how much longer it would have been buzzing away if it hadn't gotten
blasted off the pole.

Before that, the next door neighbor's dimmer was killing me. Insane
noises all over the lower bands. I finally went over one night, and
changed it out for them, no charge. The woman next door was from London
and when I told her I listened to the BBC, she got all excited and went
out and bought a RS DX-440 to listen to it.

BDK

I just installed a whole house full of RadioRA. Those things are
terrible. Not only the dimmers but there are little "repeater boxes" in
the house too and if you turn them off the remote keypads won't work.
Now that entire house buzzes in every radio.

gb

"There's no way to rule innocent men. The only power any government
has is the power to crack down on criminals. Well, when there aren't
enough criminals, one makes them. One declares so many things to be a
crime that it becomes impossible to live without breaking laws."

That's what you think, Ace.

''Warming'' refers to the mean global temperature being higher.
Breakdown of the thermohaline circulator due to excessive fresh water
in the North Atlantic will cause much lower temperatures where the
Gulf Stream and other currents used to keep winters more moderate.

temp in the North atlantic are not going to affect Michigan more than
maine

we as human are certainly affect our climate what effects will result
is unclear

A 1-meter diameter loop shouldn't require anything bigger than a
decent tv rotator.

Normally I get all sorts of buzzing, rasping, crackiling noise over the whole RF spectrum. I have identified some of them. Some of the fluorescent light bulbs put out an awful racket. The can be sniffed out with a portable radio and replaced with quiet ones. All light dimmers are replaced with off/on switches. The Neptune washing machine has a dc motor so no washing while I am trying to listen. But in spite of these efforts there was still lots of RF noise at about a S5 level.
One night we had an ice storm that took out the power line. The RF silence was deafening. I could hear dx station clearly for the first time. Brother Stair, Alex Jones, EWTN, they were all in there (just kidding) But there were still RF noises that could only be on the phone line. Unmodulated carriers, beedeleebeedelee sounds. all up and down the dial, but not wideband like the electrical racket. Then the phone lines went out when another tree went down. At last! no RF racket. I started logging dx for the first time in years. Then the power came back on and it all went away. So there are three sources of RF racket:
(1) Things inside your house (and neighbour's)
(2) the power lines
(3) the phone lines
The only fix that worked was to put up a sloper at the back of the lot and run 150ft of co-ax to the house. There is still a little hash, about S2 but it is the best I can do.

It depends on what you want to find out and what kinds of radio you're comfortable working with.

It pains me to admit this, but Shortwave radio isn't terribly useful during a disaster. Even a MW AM radio can hear radio stations from hundreds of miles away on any given night. On most nights I can hear stations in Montreal from my home about 30 miles west of Baltimore. Such a radio doesn't need to be expensive. I'm thinking GE SuperRadio here...

In general, the utility of a Shortwave radio is less because fewer and fewer stations broadcast to North America on any regular basis. Instead of a Shortwave radio, I'd get an XM or Sirus satellite radio.

A VHF and UHF scanner of good quality (one capable of APCO-25 digital reception) would be a solid investment --assuming you know how to set it up to receive your local police and fire companies. It could give you a real heads up in the event they're involved in something truly ugly.

The bottom line, however, is that you need to listen to them to get news. Most people don't want that "noise" in the background.

Me? I live across the street from a fire station. My wife actually pushed me to get a scanner and set it up so that she could find out what was going on out there. Some day, we'll get a decent APCO-25 capable scanner to find out the whole story. And I still wake up to my Grundig YB-400 every morning.

Yes, I have other radios. All of them are better than the stuff I use next to my bedside. But size and battery power mean a lot. Some day, I plan to put solar film arrays on my barn roof. It will mostly be for backfeeding my electrical meter a bit, though I still think it would be nice to have for emergencies. I'm no survivalist, but I do think it's worth while being prepared. You never know when Mother Nature will throw a curve ball at you.

Most the ones I seen for sell is around $50.00 plus $50.00 for
shipping..which makes the radio a poor buy..imo

Have you ever changed the starter on a VW bug?
In 15F weather?
In a foot of snow?

If so you are a hell of alot tougher then me.

My friends hooked a rope to their 4 wheel drive and I popped the clutch
in 2nd. Kind of interesting in a foot of snow.. Once I got the engine
running
we boogied back to Lexington.

Hint a Porshe 914 starter will fit a VW bug and you don't have to drop
the engine. VW bug starters were "missing the rear end and had to
be installed with the engine out. Major bummer.

So I would have needed to pull the engine, removed the dead starte,
drive out the
bushing in the transaxil, install the new starter, make sure it was
spaced correctly
and then reinstalled the engine.

I know I am just a lame slacker.

Terry

< Snip >

Yes but mankinds influence on the climate is unproven. People make
assumptions about the mechanism behind the changing climate and then
forget it is an assumption. Remember the climate has, is and will always
be changing. People know as sheeple will take what is fed to them
without questioning it. Mankind created global warming is the dimmest
thing to come along since DRM.

A few people have suggested the Wellborn 1530, but it looks a bit cumbersome. I have 2 other options with a wire antenna. Check out the diagrams I made and let me know if any of these are feasible and if so, what my best bet would be for this type of application. I sincerely appreciate all feedback. The 1530 is definitely still an option that is available to me still... would it still be better than one of the below setups?

I agree that the wind load in negligable for the ALA-330s so a small
standard TV rotor wll work fine. I disagree that the Wellbrook
antennas are toys. I assume the person who said that either doesn't
have one.

Rob

The 100 foot would be "better" from the more antenna standpoint but it
could pick up noise from all your neighbors on the top floor so the
shorter one on one end of the building may work better for you. There
are to many variables in a situation like this to know for sure which
will work better so you will just have try them.

VW's.I have owned three of them before.The first one was a 1961 van I bought at Steakly Chevrolet in Killeen,Texas in 1965.(when I was in the U.S.Army,,,, GO ARMY!) The second one was a 1963 VW beetle car I bought when I came home on a three day leave from Fort Hood,Texas in 1965.The third one was a 1970 VW van.Those old VW's are a pain in the arse! The clutch cables stretch and break and the balves (valves) are suppose to be adjusted every three thousand miles.I never ever want anything to do with VW anythings ever again.You freeze to death in the wintertime in those old VW pieces of junk too.There is a guy near me whom wheels and deals in old VWs,I might get over there (it's only about two miles from me) someday and look around.

Local news in NC said Tammy Faye Bakker (Messner) has terminal cancer.

Jimmy and his new wife are making a TV comeback, though, on a few local religious UHF stations in the Carolinas. It's ok - he started small before, remember? He'll be back at the Rolls Royce dealer wearing his Rolex and Gucci's before you know it.

But if you want to see another "blonde bombshell" raking in the $$$ on religious TV, check out Jan Crotch at http://www.tbn.org . Stay tuned long enough and you might even see pretty boy Benny Hen.

Enough to gag a maggot.

Whatever radio you get be sure it has a crank for power and that you
test it once a month to be sure it's working ok. Also a 9MM handgun
with enough ammo to last a while. Water, water, water.

Digital {HD} Radio Emerges Into The Future {Will You Be Listening ?}
http://www.usatoday.com/tech/products/gear/2005-08-23-digital-radio_x.htm
-by- Paul Davidson - USA TODAY -Updated 8/23/2005

After getting a lackluster rollout from both radio stations and manufacturers last year, digital radio is finally gaining some traction. Hundreds of radio stations have gone digital in recent months, and retailers are starting to offer digital radios for homes as well as cars.

Digital radio can revitalize AM stations by making them sound like analog FM, and can juice up FM stations with CD-quality sound. Perhaps more significantly, the digitized signal can be compressed to let FM stations broadcast at least one or two additional channels at the same frequency. Digital radios also display a song's title and artist on a small screen.

AM/FM radio is somewhat belatedly following cell phones, music, cameras and TVs in the march toward digital.

It costs a radio station $100,000 or so to add a digital transmitter, vs. the $2 million or more to add digital to a TV station.

By the end of 2008, 2,000 of the USA's 13,500 radio stations are scheduled to go digital, covering 95% of the listening audience, says Robert Struble, CEO of iBiquity, which developed and licenses the HD Radio technology and whose investors include 15 big radio broadcasters.

Of course, stations will crank out their analog signals as well for many years.

- Hello,
- I'm new in antenna simulation world and I would like to ask
- you some questions on some topics.
-
- I hope someone could help me.
-
- The first question is if it is true that Directivity, Gain and
- Efficency of an antenna are simply tied to the her topology
- and not to the goodness of the matching network or the
- source impedance, i.e, if I have to measure these values,
- should I necessary verify that the antenna is correctly matched
- with source?
-
- Second (and last!) question,
- I have to simulate a folded dipole with a ground connection in
- the center (necessary to the supplying chip as ground reference).
- The structure had hence 3 ports. My question is if a inductive
- or capacitive load connected to the middle virtual ground port
- (and the chip) can significantly affect the matching and other
- parameter (D,G) of the port.
- In few words, that third branch connected to a virtual ground,
- how influence the antenna behavior?
-
- Sorry for my trivial questions

It depends on whether you want the capability of changing the elevation of the loop in addition to rotating it. Tilting an antenna can sometimes improve reception from the ionosphere because it depends in part on the arrival angle of the signal to the horizon (elevation). That's a feature you can only find in a ham rotator.
You might also consider whether the reliability of the rotator is important to you. If you're going to install the loop in a location which will be difficult and/or dangerous to access, you'll want to avoid going up there again to remove a broken rotator. In that case the ham rotator should be more reliable because they're made to handle big antennas. Your loop would be a light load by comparison.
If none of the above applies to you, a basic TV antenna rotator should be fine. What brand are you considering for $65?

www.shopgoodwill.com

I guess there are still three Goodwill stores around here,there used to be four of them and there is a Salvation Army thrift store in north Jackson.The only Goodwill store I get to anymore is the Goodwill store less than one mile South of doggy's couch.Last year I asked a Goodwill manager woman at that Goodwill store if they are online.She said they aren't online.

Most of us have heard (or even seen) electric motors catching fire and blowing up.I once bought a dang good heavy cast iron frame jig saw (I still have it here) at the Salvation Army store.(only five dollars) I plugged it in at the store and I switched it on.About ten seconds later,that Dayton electric motor spouted fire and came to a sudden Halt! I reckon it was all of that sawdust and junk inside of the motor that did it.

FYI, Yaesu has a value-priced rotator, the AR-40, that's about $270
last time I looked. Would be a nice compromise between a tv rotator
and the bigger ham jobs. But a decent TV rotator should do it -- if
you can find one.

He used to have a TV show that came on at 11:30 at night, opposite
Letterman in the mid-1980s. In fact, he pulled a bigger market share
than Letterman in many markets. It was a funny show; I watched it all
the time.

1994. OT: Radio as a tool of survival ?

Newsgroup: rec.radio.shortwave
Date: 2007-01-22 18:10:22 UTC
From: Caveat Lector <CL@nowhere.com>
Message-ID: <j67th.53477$z16.34802@newsfe10.phx>
Source record: 104093

I have talked to several hikers and back packers and the are very reluctant to carry a radio (cell phone, FRS, GMRS, Ham) and a GPS Unit on hikes, mountain climbs, etc. Also I understand the Park services are experimenting with wrist sized radios that transmit radio signals can be read from 2,500 feet in the air and don't require satellite technology and have a 45-day battery.

Rationale is too much weight. They even cut the handles off of tooth brushes to keep the total weighy down. Understandable I guess

But there are several cases where radios and a GPS unit have been life savers.

Here is one.

* Ham radio key in California hiker's rescue: The San Diego Union Tribune's SignOnSanDiego.com Web news service reports that a hiker in the El Capitan open space preserve suffering apparent heat exhaustion was rescued July 19 after his hiking companion used ham radio to relay a message to authorities. ARRL member Rod Dinkins, AC6V, picked up the distress call from Tim Slaby, KG6QPL, and alerted the San Diego County Sheriff's Department's Santee station. Slaby resorted to his ham radio handheld after discovering that his cellphone wouldn't work in the wilderness. KG6QPL was able to raise the Palomar Amateur Radio Club repeater some 40 miles away, however. Slaby, who also carried a GPS unit, was able to pinpoint the pair's location. A sheriff's helicopter crew rescued the exhausted hiker--identified as Thomas Sayer--and airlifted him to an ambulance, which transported him to a hospital, authorities said. He was treated for dehydration and released about four hours later. "For hikers in need of help, Amateur Radio worked where their cell phone didn't," said ARRL Vice President

What are your opinions on the matter.

During a real crisis (see Art Bell for aliens, birds, famine and other unlikely happenings) the ham bands will provide you with very little useful information when an emergency occurs. You need to be in touch with the real emergency responders, or at least know what their instructions are. The chances are that they will communicate by local radio station, as was done during Katrina. At least one New Orleans station broadcast local emergency information nonstop.

So get a hand crank Grundig radio that covers AM and FM.

Chad,

If those are the two options and you can't go out from the building then I would go for the 100ft along the ridge depending on how that relates to your mountains. In the main you will be picking up signals broadside to the wire and not off the ends. Which ever you go for your main problem will be electrical noise and harmonic hash from the equipment in the building (TV, computers, modems, etc.), if it has a metal roof all the better!

Get or make a decent ATU - cheap on eBay - and get the wire as high above the ridge as you can. Use a balun designed for a wire antenna and feed from one end with co-ax Create a decent RF ground. (There's plenty of info around if you use Google.)

I live in a first floor flat in the south of England and using a wire antenna and ATU I have heard amateur stations from Central & N. America, Australia, N Africa, Asiatic Russia & Mauritius in recent months.

I tried to post this earlier but google ate it.

I had a chance to test a ALA-1530 for over a month.
I was very unimpressed.

The WL1030 worked at least as well and can be built for
much less green stuff. <www.wl1030.com> The only hard
part to find is the Litz wire. And in truth I couldn't tell
any difference between solid, stranded and litz wire
in this application.

I am not a fan of loops and continue to be impressed by
the loyalty of true believers.

If, as the manager, you could cheat a bit more, there is a 15'
relay switched antenna that works very well.
<http://www.kongsfjord.no/> Look in "The Dallas Files";
"LW-MW-SW Relay Tuned 15' Noise Reducing Vertical Antenna",
It does require at least a 4' ground rod 6 to 8 work much better.
While I have always been a fan of coax feedlines, I have to admit
that for this antenna balanced feedline, either Radio Shack speaker
wire or AC zip cord, worked slightly better then coax.

Other good antennas could be any of Dallas Lankford's active
antennas. The new comp pair is very very good but rather
difficult to setup.

The next best is "Some of My Favorite Small Antennas for MW and LW",
set up is straight forward, but the Crystalonics FET is pricey.

The much less expensive antenna in "Low Noise Active Antenna AC/DC Power
Supplies" is a very good active antenna. When configured as a active dipole
it is a very good performer and only usuitable (IMHO) in very strong MW
signal locations.

To the best of me knowledge there are no commercial versions of
any if these antennas.

A friend built the 15' relay switched and used very inexpensive radio shack
12V relays that he sealed with GE "silicon seal".

And if none of these look interesting be inventive. Do you have a wood fence?
Run wire that blends in as high on the fence as possible.

Do you have access to the attic, if there is one, you might try to run wire
along the peak, or form a quasi dipole.

Are there "tall" trees close to the building? If so then run some wire
up the side of the tree. Works best where there aren't kids, they tend
to find and pull stray wire off.

Terry

Can anyone recommend an inexpensive portable that includes the aircraft band? It doesn't need to perform particularly well, I just want to narrow down some powerline noise that I've only been able to trace to a general area.

-Brian

2011. Should a shortwave loop antenna, hung outside, also improve FM reception?

Hi. If you clip an outdoor shorwave loop antenna to your FM telescopic antenna, should it improve FM reception? I'm noticing some very good improvements on FM when I clip my shortwave antenna to my FM telescopic antenna.

I use an older Pro34 that I bought for about $25 at a hamfeast.
Any older programable scanner with air band will work fine.

And pen flares do a fair job of starting a fire if all else fails.

And when shot in the face of an attacking dog it helps the
dog decide to leave in a hurry. I like dogs, I don't like getting
bitten.

Class warfare? Hardly.

Either you bid your max to ebay or you bid your max to a sniping service
[and give up your personal information to the sniping service].

Either way, you offer the most you want to pay and wait and see if you
get it. Best you can do.

If you use ebay and just get serious with a one and only ebay bid, you
will NEVER be disappointed -- if you get it or not.

Think about it.

To me, nothing is funnier than seeing two or three bids come in at the
last few seconds, while I wind up getting the item anyway, simply because
I bid to ebay what I was willing to pay in the first place.

And I feel equally good when some idiots snipe-up a price to more than
the fair and reasonable price I was willing to pay in the first place!

[On the other hand, when I'm selling something, bring on the idiots...]

You are obviously one of the lethargic few who will debate until your
last breath that something like a TNC will do all the work, so why bother
to learn something new?

Let me pass on some facts:

CW retains characteristics not lost over distance. You won't find this
with other modes.

Since CW relies on only an on-off keyed radio signal, it requires less
complex equipment than other forms of radio communication, and it can be
used in very high noise / low signal environments.

It requires less bandwidth than voice communications, typically 100-150
Hz as compared to the roughly 2400 Hz of single-sideband voice.

Transmitted energy is concentrated into a very small bandwidth, making it
possible to use narrow receiver filters, that suppress or eliminates
interference on nearby frequencies.

The narrow signal bandwidth also takes advantage of the natural aural
selectivity of the human brain, further enhancing weak signal
readability.

What does that mean? Your brain will be able to decode the signal long after your TNC loses the ability to. If you want to learn more, open a book and read.

The extensive use of pro-signs, Q codes, and the restricted format of a typical messages, facilitates CW communication between amateur radio operators who do not share a common mother tongue. Geeze, learn a new language like morse code and you can converse with minimal difficulty to people who normally don't speak your language.

This proves that CW is worth preserving. It provides a fundamental means of communications between operators of different continents.

This hobby is fast losing that ability with mindless twits like you!

Until 2003 the International Telecommunications Union (ITU) mandated Morse code proficiency as part of the amateur radio licensing procedure throughout the world.

In some countries, certain parts of the amateur radio bands are still reserved for transmission of Morse code signals only. Have you looked at our band plan lately?

You probably don't know this, but the FCC has a "use it or lose it" policy. Look what happened to the 11 meter band now called C.B. or the bottom half of the 220 band that was sold off.

We stand a real chance of losing portions of the hf band because of a loss of qualified CW operators. While the reality of that situation would take a number of years to surface, it is something we need to think about and prepare for now, not later.

Just because some operators use a more modern method of communications, it does not necessarily signify accomplished applications like CW will automatically become outdated as you try to depict.

What you consider outdated and ancient is still in use today on ships by the military and on over-seas flights. It is just no longer the standard or primary form.

Remember those odd TELEX numbers? Today we call it a FAX. Most airline pilots still have the ability to receive a TELEX from one from their offices right in the cockpit.

In light of 9/11 they are moving away from that system to satellites which provide a more instantaneous and reliable form of communications.

You descriptions of old vs. new were hysterical! Let me give you a big fat history lesson.

Morse code came to being in the mid 1830's. The first use of CW over radio was in the 1890's.

Now this is where your ignorance really shines. Spark Gap transmitters were not replaced by phone users.

Spark Gap's were the original transmitters for morse code dating back to the end of the 19th century. Spark gap transmitters generate fairly broad signals.

As the more efficient transmission mode of continuous waves (CW) became easier to produce and band crowding and interference got worse, spark-gap sets and damped waves were "legislated" (theres that government word again) off the new shorter wavelengths by international treaty, and replaced by Poulsen arc converters and high frequency alternators. Later these too yielded to vacuum tube technology and the 'electric age' of amateur radio would end.

Long after being stopped for communications, spark gap transmitters were employed for radio jamming. WW2 vets can attest to that.

Spark gap oscillators are still used to generate high frequency high voltage to initiate welding arcs in gas tungsten arc welding. If you want to know the definitive differences between the two, open a book!

With the development of more advanced communication technologies, the widespread use of CW is now largely outmoded. That does not make it outdated, unusable or undesirable as you would want me to think.

Before you insert foot in mouth, know what the hell your talking about.

Any nearby village lost an idiot lately? I think I found him.

The telephone did not replace the telegraph. Until 1877, all rapid long-distance communication depended upon the telegraph. That year, a rival technology developed, the telephone.

By 1879, patent litigation between Western Union and the infant telephone system was ended in an agreement that largely separated the two services. The telegraph continued after the invention of the telephone.

FYI - Western Union sent its last telegram in January of 2006. It took 129 years for the telegraph to succumb to more modern technologies in the United States. I would say CW must perform remarkably well, just not as fast.

The telegraph was a format of communications between two locations tied together by wire. Early systems produced a paper copy with raised dots and dashes, which were translated later by an operator.

When you saw someone reading a ticker-tape in an old movie, they were translating morse code or at least faking it for your amusement.

The telegraphs adversary if you need to have one, was the ability to send code "wireless." signals carrying the same morse code as opposed to using wires. It later became referred to as CW or (LMAO) SPARK GAP!

Operators discovered accidently that they developed the ability to distinguish by ear the various "clicks" the code made as it was transmitted.

The paper strip was discontinued and operators decoded CW by ear up to 40 and sometimes 50 wpm. Boo! Hoo!, young ones today can't copy 5 wpm. Boo Hoo my ass! People are relying more on conveniences of a TNC than their own abilities.

AM was not replaced by FM signals. They are two totally different formats each having their own pros and cons. The transition to digital can be accomplished with almost any form of signal.

BTW, AM mode transmissions are still used today in private, commercial and military aircraft. Consult your scanner book for more info. It is FAR from outdated as you believe.

Don't talk to me about how we're just going to digital. We've been operating digitally for years, where have you been, under a rock?

Hedy Lamarr, does the name ring a bell? She was a very famous actress in the 30's and 40's. She invented spread spectrum. Look up U.S. Patent number 2,292,387. It was applied for June 10, 1941, and received August 11th, 1942.

Spread spectrum is the basis for the communications security of the strategic $25 billion MILSAT Defense communications system. Based on what you believe, MILSAT must be outdated too, right?

I found your analogy of a horse and buggy compared to CW amusing. What you apparently failed to learn in life is the appreciation one puts into the craftsmanship of the buggy. We still make them, still make the bridles and even the saddles when we want to ride high atop of the horse.

How many CW contests have you been in on the radio? Do you know what one is? Do you know why we have them? Do you know what the various code types are for?

I have observed for years that the older one gets the more knowledgeable that person usually become. It's just a scheme of life. You on the other hand disappoint me very much.

You might have gained the ability to operate hf through the changes of a few laws, yet you fail to appreciate what is gained from the experience.

You have the temerity to say I am wrong for having and defending all the knowledge I have gained over the years, when you can't even comprehend how stupid you made yourself look by not knowing just some simple facts about this hobby.

Until you can show one ounce of appreciation for what you have and for what others like myself have gone through to get OUR tickets, your no radio operator in my eyes, you're just an arrogant snob.

BTW, look up outdated and archaic. They both mean the same thing. Stutter too?

Marc

Bullshit

we are in no danger of lossing hf spectrum due to lack of Morse
operators the only that could happen is if we still maintina the old
sub bands the FCC helped us out by narrowing them and thus forcing the
morse op to move closer together and allowing the rest of us to use
the rest of the band

We reply:
Congratulations on your return to ham radio.

The Great Liberty Net is very excited that you will soon be checking in.

But Kind Jewish Indian thinks he can convert you to The Friendlies.

So you will be in big demand on 3950 that's for sure.

Now about the antenna. no random wire allowed. You know the Tiny-Tenna is the only way to fly ...

Hey you could advertise Tiny Tennas on OTDF and maybe get a commission for every one sold.

You could get rich doing this - tens of thousands of SWL'ers need this product.

Hurry up and do another OTDF and those orders will come rolling in.

You'll need a staff of hundreds just to answer the phones and process the orders.

You'll be driving a new 'Vette in no time.

Nashville Joe will be sooooo jealous.

We all will.

Let us know when to listen -

We want to be the first in line for a new Tiny Tenna.

set up to extend rule to 2016 with Hillary's election now assured. Can you American lemmings see how this has been orchestrated? The power brokers trot out opponents that can not win e.g. Obama (yeah right the American people are going to elect a young black guy with a Muslim background) to contend with Hillary for the Party nomimation.

Then to give the illusion of having a "choice" a worn out hack like McCain or some other unelectable establishment errand boy (yo Bob Dole are ya busy?) is placed to run against her in the general election and, well you know the rest of the story.

The Bush/Clinton crime family reign, which began in 1980, will continue to the year 2016 with Hillarys two term dictorate. THIRTY SIX consecutive years of Bush/Clinton rule! And you idiots honestly believe you had a say in the process. Were it not so sad it would be hilarious.

The ruling elite play chess, you play checkers. That's why you are enslaved and too stupid to even know it.

Exactly. The dynasties are here. Going to take a bit for everyone to
figure it out and riot in the streets though. Computers make crowd
control much easier these days. Plus, the general decline in American
education is an efficient tool of theirs. And, couple this up with the
pitting of all racial/religious/political groups against one another is
the old Roman trick of "divide and conquer" and highly effective too ...

You do have a point.

The MFJ-852 device works fine, though it's a little delicate physically.
Very sharp nulls. The meter is a good aid in the search.

However, it won't lead you to powerline noise directly, since the noise
re-radiates up and down the line, so it's not a single source at the
source, so to speak.

It's in the aircraft band, as you'll find if you live near an airport.

> > -
> > -
> > - -

Hello Camelot,

Directivity is determined solely by the antenna structure. I dipole has a directivity of about 2.14 dB, no matter from what impedance you will feed it. Be carefull that in many cases the feedline will carry common mode current and will radiate too. If so, you must model at least the screen of the feeder as part of the antenna too.

Directivity is strongly related to the radiation pattern of the antenna.

If the match is perfect and there are not heat losses, directivity = gain.

Efficiency is the ratio between total radiated power and real input power (always less then 1). Efficiency is limited by heat losses in conductors and dielectrics.

In general: gain = directivity - (mismatch loss) - efficiency.
All in dB.

So if you have an antenna with a maximum directivity of 6 dBi, a VSWR=2 and efficiency = 0.5, you gain in the direction of maximum directivity is 6 - 0.5 - 3 = 2.5 dBi.

>From the input impedance you cannot say something about directivity. For example, look to a HW dipole, it has about 50..73 Ohms. A folded dipole (with same radiation pattern and hence same directivity) has about 200 to 300 Ohms input impedance.

About the effect of the middle ground port.
When the output of your RF chip has good symmetry, and your antenna will have good symmetry too, the RF current into the middle port will be negligible. A decoupling coil or capacitor may have a small effect on resonant frequency of the antenna (because of small capacitive coupling to the actual antenna). The change in input impedance will be minimal/negligible also.

If you might expect asymmetry, using a capacitor to ground, will cause (significant) current through the capacitor and hence will affect radiation pattern, input impedance, etc.

Best Regard and good luck,

Wim
PA3DJS.

According to :
http://www.irib.ir/worldservice/englishRADIO/frequency%20and%20time%20table/frequency.htm
if it was on 41m, and if you're located in North America, it might be
7160 kHz.

It's always amazing, if not funny, to listen to the iranian point of
view...

Frontpage Interview's guest today is Dinesh D'Souza, the Rishwain Research Scholar at the Hoover Institution at Stanford University. He is the author of several bestselling books, including Illiberal Education, The Virtue of Prosperity, and What's So Great About America. He is the author of the new book The Enemy At Home: The Cultural Left and Its Responsibility for 9/11.

FP: Dinesh D'Souza, welcome to Frontpage Interview.

D'Souza: Thank you.

FP: I'd like to announce to our readers right up front that Mr. D'Souza and I disagree with each other on various aspects of his argument in his new book. And the two of us have had an exchange here at Frontpage about our disagreements. However, out of courtesy to Mr. D'Souza, in this first part of our interview we will allow him to express his thesis without any rebuttal from my end. In this way, Mr. D'Souza can crystallize his main points without us getting into a point-counterpoint exchange which may prevent his main thesis from being clearly synthesized. Then, in tomorrow's issue, we will publish the debate between us.

So let's begin. Mr. D'Souza, what inspired you to write this book?

D'Souza: While I was researching my previous book What's So Great About America I realized that there was a big debate about Islamic radicalism going on in this country, but it bore little or no resemblance to what Muslims were saying in their own countries. A good example of this is Sayyid Qutb, the Egyptian writer who has been called "the brains behind Bin Laden." Here in this country we hear that the Islamic radicals are against science and capitalism and democracy. "They hate us for our freedom." Qutb was for science and capitalism. He supported democracy. Yes, he wanted an Islamic state under sharia. His point was that sharia should reflect the religious and moral sentiments of the Muslim people. His anti-Americanism was based on what he saw as the paganism and immorality of American culture. He didn't hate us for our freedom, he hated us for how we have used our freedom.

FP: One of the points you stress is that the war on terror is not a "war of competing fundamentalisms" between Islamic fundamentalism and Christian fundamentalism. Tell us why you find it important to make this point.

D'Souza: If this was a war of competing fundamentalisms, then clearly the solution is secularism. And this is what many people, mostly on the left but some on the right, are recommending today. "Bring on the Islamic

Reformation." These people think that an Islamic Reformation would go down the same path as the Protestant Reformation, toward secularism. But Islam is in the middle of a Reformation. The only problem is that during such a time there is a return to origins, to the way the faith started. Islam began with a unification of church and state, an infusion of Islam into all aspects of the society. And this is what many Muslims want, not just "fundamentalists" but also traditional Muslims.

So when religious Muslims look at America, what they object to is not Christian fundamentalism but what they see as an official stance of atheism. Bin Laden calls America the fountainhead of global paganism, and many Muslims agree. We don't think of separation of church and state as atheism, but Islam is a religion of law rather than creed. Islam in this respect is like ancient Judaism. So for Muslims, the idea of expelling God out of the public sphere of society is atheism. In fighting America the radical Muslims believe they are protecting not just Islam but monotheism against the greatest embodiment and promoters of atheism in the world, which is us.

FP: You argue that liberal popular culture has created a blowback of resistance from traditional cultures, especially Islamic culture. Kindly explain.

D'Souza: Here in America we know that there is a distinction between the values of American popular culture and the values by which Americans live. But for a Muslim on the streets of Cairo or Islamabad, American popular culture reflects what America is all about. Our popular culture is our country's face to the world. There is an attractive aspect to this culture, its vitality and individuality. But there is also a lot in this culture that is excessive and trivial and indecent and shameful. I'm not just talking about rap music and Jerry Springer, but also about so-called high culture. Eve Ensler is very proud that her "Vagina Monologues" has played worldwide, including in many Muslim countries. She is especially proud of sequences in which people stand up and discuss their vaginas. Now you have to remember that outside of Europe andAmerica, most of the cultures of the world are quite traditional. They are socially quite conservative. Islamic culture is especially conservative in valuing female modesty and childhood innocence. So things that we may consider edgy or "pushing the envelope" here in America are, in the Muslim world, considered shocking evidence of American moral degeneracy. The radical Muslims say it's one thing for Americans to have these perversions in their own society, but now they are forcing it upon the rest of the world. So the call to jihad is issued defensively: to protect Islamic society from values that will undermine the religion and destroy the family and corrupt the children.

FP: If Islam rejects separation of church and state, how can Muslim countries become democratic?

D'Souza: Separation of church and state is an American invention. Even the Europeans don't have it. In England you have the Anglican church which is an official establishment. Even European countries which are more secular than the United States often give money to religious schools and so on. So religious establishment is consistent with religious toleration. And

religious toleration is an idea that has long been upheld in Islam. When Catholic Spain gave the Jews three choices-leave the country, convert to Christianity, or be killed-Jews and other religious minorities were living peacefully and practicing their religion in Muslim empires, from the Mughal empire in India to the Abbasid empire and later the Ottoman empire based in Turkey. True, the Islamic empires discriminated against other religions, but they put up with them and gave them considerable control over their own communities. The radical Muslims are trying to get rid of this tradition of religious toleration, but the traditional Muslims still abide by it. Here is something within the Muslim tradition that can provide a foundation for Muslim democracy.

FP: You cite Abu Ghraib as an example of the depravity of "liberal family values." Why exactly do you say this?

D'Souza: For Muslims, torture was not the big story at Abu Ghraib. Historian Bernard Lewis has said that compared to prisons anywhere in the Muslim world, Abu Ghraib was like Disneyland. Many of the infamous pictures depicting captives blindfolded, or with wires all around them-that was simulated torture, not real torture. What really scandalized the Muslim world was the pictures of sexual depravity. Now even some conservatives minimized this at the time, I guess in the hope that it would make the scandal go away. "It was just a fraternity prank," and so on. But for traditional societies where honor is the highest social value, there is nothing amusing about taking a religious man and putting a woman's underwear on his head. There is no humor in stripping him naked and forcing him to masturbate while you take photos. For many Muslims Abu Ghraib was an illustration of what perverts Americans have become, and how lightly we tread on other people's sacred beliefs. We think that a little sexual tomfoolery is nothing compared to cutting of a man's head and broadcasting the assassination on the Internet. But for many Muslims, it's bad to kill a man but it's worse to strip away his honor. This is why some traditional Muslims are reluctant to condemn their radical counterparts. They don't want to be seen as taking the side of Western depravity, a depravity that my book shows to be the product of contemporary liberalism.

FP: You challenge the idea that radical Muslims are against modern science, democracy and capitalism. How come?

D'Souza: Because they're not. Read the works of the leading thinkers of Islamic radicalism, like Qutb and Sharia'ti and Mawdudi. They are all champions of modern science. They like capitalism. Now democracy is a trickier issue. Here the radical Muslims are divided. Some, like Qutb, support democracy while others say we cannot allow the will of the people to substitute for the will of God. But in the last decade and a half most of the leading organizations of radical Islam have become enthusiastic proponents of democracy. Why? Not because they have been reading The Federalist Papers. The reason they support democracy is that they have discovered that this is an excellent way to come to power. Look at the success of the Islamic Salvation Front in Algeria in the 1990s. Or the success of Hamas. Or of the Muslim Brotherhood in the Egyptian

parliamentary election.

FP: You say that liberal foreign policy sowed the seeds of 9/11. How?

D'Souza: First the liberals advising Jimmy Carter helped radical Islam to capture its first major state. Since the 1920s the radical Muslims were on the margins of society. But in 1979 they came to power in Iran. How did this happen? Well, our friend Carter was elected in 1976 on a human rights platform. The liberals went to Carter and said, "You can't support the Shah of Iran because he is a dictator. He has a secret police. He violates human rights." And so Carter began to pull the Persian rug out from under America's ally. As resistance to the Shah mounted, Carter urged the Shah not to resist it but to abdicate, which he did. And the result was Khomeini. In trying to get rid of the bad guy, liberal foreign policy brought us the worse guy. Khomeini invented the idea that America is the Great Satan. He called for martyrdom in the cause of fighting America. Without Khomeini, we would never have had Bin Laden. Khomeini paved the way for 9/11. I'm not even going to get into Clinton's role in emboldening Bin Laden to strike when he did. I'll leave that for people to read in my book.

FP: You say the left wants us to lose in Iraq. But why? Aren't the Islamic radicals a threat to women's rights and gay rights?

D'Souza: It's quite clear that the left wants us to lose the war on terror. Some people like Michael Moore and Noam Chomsky and Howard Zinn are outspoken in saying this. But even people who don't say it clearly wish it. If you think the left wants us to win, then its actions become baffling and mysterious. You have to labor hard to figure out why they speak and act like they do. On the other hand if you assume the left wants us to lose, then all its rhetoric and actions make complete sense. But why? Because the left is a bit scared of Bin Laden but it is very scared of Bush. The left doesn't like Bin Laden but it absolutely hates Bush. And while Bin Laden and his allies are the "far enemy," Bush and the conservatives are the "near enemy." As the left sees it, Bin Laden threatens sharia in Baghdad, but Bush threatens sharia in Boston. Imagine one or two more conservative court appointments and the whole liberal agenda of the past half-century is jeopardized. So the left is quite willing to ally with the lesser evil, the Islamic radicals, in order to defeat the greater evil, Bush and the right.

FP: We have a difficult time with the word "treason" now. Is treason the problem?

D'Souza: No, because the left loves America. Yes, I know David Horowitz is going to do a double-take on that, but it's true. I'll say it again: Michael Moore loves America. The only thing is that he loves a different American that we do. What he loves is liberal America, the America of labor revolts and bra-burning and the Stonewall riots and Roe v. Wade. What he hates is traditional or conservative America. Jeanine Garofalo said that she hates it when people wave the American flag but she gets teary-eyed when they burn the American flag. That's because she identifies the flag with traditional American values. So she's not anti-American: her patriotism is based on an allegiance to liberal American values.

FP: How important is the Iraq war? Can we win?

D'Souza: I am not sure how we are doing in Iraq. It's hard to say because the media accounts are so untrustworthy. It's important we win because we don't want radical Islam getting its hands on a second major state. They already have Iran, and that's a big enough problem. If Iraq falls, you can be sure that Egypt and Saudi Arabia will be targeted next. This is not Vietnam, which was peripheral to our vital interests. Our whole way of life, not to mention our security, depends at least for the foreseeable future, on a stable Middle East. So the stakes in Iraq are very high, and the Democratic Leadership that is trying to force a precipitous withdrawal is playing with fire.

FP: You say America can fight a better war on terror by making allies with traditional Muslims. What do you mean?

D'Souza: Our current strategy is based on trying to find secular liberals in the Muslim world, people who believe in women's rights and separation of church and state. News flash: there are hardly any such people. Yes, there is Salman Rushdie and a lesbian radio host in Canada who have gotten a lot of attention. I like some of the things these Muslim liberals are saying. But they have no constituency in the Muslim world. That world is divided between the Islamic radicals and traditional Muslims. The left is allied with the Islamic radicals, so common sense says the right should build ties with traditional Muslims. Besides, there is no way to win the war on terror without driving a wedge between radicals and traditionalists. The traditional Muslims are the recruiting pool for radical Islam. Even if we kill 100 radicals, it's no use if 500 traditional Muslims join the next day. So we have to find a way of drying up radical Islam's recruitment. Whenever we attack Islam or say that Muhammad was the founder of terrorism, we are pursuing a self-defeating strategy because we are driving traditional Muslims into the hands of the radicals. My book, however, has specific suggestions for how America can work with traditional Muslims to defeat not only Islamic radicalism but also the global influence of the cultural left.

FP: Dinesh D'Souza, thank you for joining us.

D'Souza: It's been a pleasure.

FP: In tomorrow's issue, Mr. D'Souza and I will continue our conversation -- albeit with a little more intensity. We'll debate, in detail, some of Mr. D' Souza's arguments. Tune in tomorrow...

2058. The Question of Carter's Cash

In which our reporter follows the money
CLAUDIA ROSETT

Did Jimmy Carter do it for the money? That's the question making the rounds about Palestine: Peace Not Apartheid, an anti-Israeli screed recently written by the ex-president whose Carter Center has accepted millions in Arab funding.

Even in Carter's long history of post-presidential grandstanding, this book sets fresh standards of irresponsibility. Purporting to give a balanced view of the Palestinian-Israeli conflict, Carter effectively shrugs off such highly germane matters as Palestinian terrorism. The hypocrisies are boundless, and include adoring praise of the deeply oppressive, religiously intolerant Saudi regime side by side with condemnations of democratic Israel. In one section, typical of the book's entire approach, Carter includes a "Historical Chronology," from Biblical times to 2006, in which he dwells on events surrounding his 1978 Camp David Accords but omits the Holocaust. Kenneth W. Stein, the founder of the Carter Center's Middle East program, resigned last month to protest the book, describing it in a letter to Fox News as "replete with factual errors, copied materials not cited, superficialities, glaring omissions, and simply invented segments." As this article goes to press, more protest resignations, this time from the Carter Center's board of councilors, appear to be in the works.

If there is a silver lining to any of this, it is that Carter's book has drawn much-overdue attention to some of the funding that pours into the Carter Center, whose intriguing donor list includes anti-Israeli tycoons and Middle East states. Founded in 1982 and appended to Carter's presidential library, the center has served for almost a quarter century as the main base and fund-raising magnet for Carter's self-proclaimed mission to save the world.

In recent weeks, a number of articles have noted that Carter's anti-Israeli views coincide with those of some of the center's prime financial backers, including the government of Saudi Arabia and the foundation of Saudi prince Alwaleed bin Talal bin Abdul Aziz al-Saud, whose offer of $10 million to New York City just after Sept. 11 was rejected by then-mayor Rudy Giuliani because it came wrapped in the suggestion that America rethink its support of Israel. Other big donors listed in the Carter Center's annual reports include the Sultanate of Oman and the sultan himself; the government of the United Arab Emirates; and a brother of Osama bin Laden, Bakr BinLadin, "for the Saudi BinLadin Group." Of lesser heft, but still large, are contributions from assorted development funds of Saudi Arabia and Kuwait, as well as of OPEC, whose membership includes oil-rich Arab states, Nigeria (whose government is also a big donor to the Carter Center), and Venezuela

(whose anti-American strongman Hugo Ch&#65533;vez benefited in a 2004 election from the highly controversial monitoring efforts of the Carter Center).

A recent editorial in Investor's Business Daily, headlined "Jimmy Carter's Li'l Ol' Stink Tank," listed a number of "founders" of the Carter Center. The names were drawn from the annual reports, and included "the king of Saudi Arabia, BCCI scandal banker Agha Hasan Abedi, and Arafat pal Hasib Sabbagh." And, writing last month in the Washington Times, terror-funding expert Rachel Ehrenfeld described links going back to the 1970s between the Carter family peanut business and the Bank of Credit and Commerce International, whose Pakistani founder helped bankroll the Carter Center at least until BCCI went belly-up in 1991, busted as a global criminal enterprise.

There is, of course, much more to the Carter Center than this list implies. It is large, with assets totaling $377 million (as of 2005), an operating budget of some $46.8 million, a staff of some 150, a 200-member board of councilors, and hundreds of donors, including not only individuals and foundations, but the U.S. Agency for International Development and the U.S. State Department. Some of the center's work is devoted to such laudable causes as wiping out the parasitical guinea worm. Indeed, it is possible to glean from various news items and brief mentions in the center's annual reports that some of the more intriguing donors, such as the sultan of Oman and the OPEC development fund, have been giving money for exactly such causes. According to one notation on the Carter Center website, for example, King Fahd of Saudi Arabia donated $7.6 million in 1993 to help Carter fight the guinea worm.

But notwithstanding such occasional tidbits, it's stunningly hard to discern from the Carter Center's public documents who is giving precisely how much, and for what. Donor names, sometimes listed only as "Anonymous," are lumped under broad categories such as "$100,000 or more" or "$1 million or more." There is no systematic tally of just how much "more" - no clear way to know, for example, whether Saudi money accounts for only a tad of Carter's funding or a mighty dollop, and whether the Saudi share of total contributions has changed over the years. Neither is there any systematic disclosure of who is funding exactly what activities in the name of "waging peace," "fighting disease," and "building hope" - the center's self-proclaimed missions. A reporter's e-mail exchange with Carter Center press secretary Deanna Congileo elicits the response that none of the anonymous donors are from the Middle East, but no further details can be released without permission from the donors - which, even if granted, will take some time to obtain (stay tuned).

All this might be less disturbing had Carter confined his post-presidential efforts to such good works as vanquishing the guinea worm. But for years he has run his own mini-presidency - complete with a series of attempts to outflank or shape the policies of sitting presidents. These have included - to name just two examples - his letter-writing campaign in 1990 to members of the United Nations Security Council, in an effort to thwart the Bush I coalition that fought the first Gulf War against Saddam Hussein; and his

1994 trip to North Korea, where he proposed to the dying tyrant Kim Il Sung a deeply flawed nuclear-freeze deal that may well have helped Kim's son consolidate power and develop ICBMs and atomic bombs.

It could be argued that Carter, whatever his pretensions, is, after all, a private individual running a private foundation, and is therefore under no obligation to disclose full details of the getting and spending of the river of money flowing through his center. (In 2004, the most recent year for which the center's website makes such figures available, donations totaled $146 million.) But in all his waging and fighting and building (and fundraising), Carter has been trading for years on the respect accorded to his former public office. Regardless of whatever room for murk the law allows, full financial disclosure is what sound judgment demands. The Carter Center itself makes much in promotional materials of its efforts to strengthen democracies by "promoting government transparency." Is Carter so rigidly certain of his rectitude that he believes himself exempt from his own preaching?

In a recent Los Angeles Times opinion piece defending his new book (and insinuating that the debate over it is being controlled by pro-Israeli lobbyists), Carter wrote that he is merely seeking a "free and balanced discussion of the facts." It is quite possible that even he may not know for sure whether he has molded his views to suit anti-Israeli donors; whether his center has attracted the money of such donors because they like his views; or whether, while fighting the guinea worm, he simply made the unrelated mistake of writing an appallingly biased and bad book. But having parlayed his former public office into global influence, he owes the public at least this much: Tell us, clearly and directly, enough about your supporters and their money that we can, with full information, decide for ourselves what is going on.

Why don't you fucking Jews go and post a few boo hoo stories about
grandmomma and mammy and pappy getting their asses gassed in a
concentration camp or how anti Semitic the world is and how righteous
the scumbag Israelis are for killing 9 year olds, and leave poor Jimmy
alone? Jimmy's only telling the truth, so shut the fuck up fag boy.
And don't you have your own newsgroups to post in like alt.my people
are geniuses and the rest of the world is shit, or alt. everyone in my
family is a Jew homo including my mother and father, or alt. although
as a race we are the ugliest motherfuckers on the planet we make a lot
of money? Or maybe you disgusting genetically fucked faggots could
collect your rent money from the slums you run in Harlem while letting
the poor tenants continue to wade in raw sewage with no heat or
electricity? If you fucks aren't careful we gentiles will stop
fucking your women while you're at work making millions selling stolen
diamonds and ripping the rest of the world off.

Thanks, it is 7160, though with the S-38C, I couldn't really tell! It really is fun SWL'ing with the old boatanchor stuff in this age of digital. Brings back the fun I first had when I was new to the game with an S-120 and then graduated to an S-40! Now, it is just a fun challenge to see how many countries and states I can pull in on the old radios, the other is a Lafayette HE-10, like new, fully recapped and restored. Antenna is about 100ft of insulated wire on the roof leading down to the radio through the window.

http://www.nytimes.com/2007/01/21/books/review/Wolfe.t.html

January 21, 2007
None (but Me) Dare Call It Treason
By ALAN WOLFE

THE ENEMY AT HOME
The Cultural Left and Its Responsibility for 9/11.

By Dinesh Dï¿½Souza.

333 pp. Doubleday. $26.95.

At first Dinesh Dï¿½Souza considered him ï¿½a dark-eyed fanatic, a gun-toting extremist, a monster who laughs at the deaths of 3,000 innocent civilians.ï¿½ But once he learned how Osama bin Laden was viewed in the Muslim world, Dï¿½Souza changed his mind. Now he finds bin Laden to be ï¿½a quiet, well-mannered, thoughtful, eloquent and deeply religious person.ï¿½ Despite being considered a friend of the Palestinians, he ï¿½has not launched a single attack against Israel.ï¿½ We denounce him as a terrorist, but he uses ï¿½a different compass to assess America than Americans use to assess him.ï¿½ Bin Laden killed only 3,000 of us, with ï¿½every victim counted, every death mourned, every victimï¿½s family generously compensated.ï¿½ But look what we did in return: many thousands of Muslims dead in Afghanistan and Iraq, ï¿½and few Americans seem distressed over these numbers.ï¿½

I never thought a book by Dï¿½Souza, the aging enfant terrible of American conservatism, would, like the Stalinist apologetics of the popular front period, contain such a soft spot for radical evil. But in ï¿½The Enemy at Home,ï¿½ Dï¿½Souzaï¿½s cultural relativism hardly stops with bin Laden. He finds Ayatollah Khomeini still to be ï¿½highly regarded for his modest demeanor, frugal lifestyle and soft-spoken manner.ï¿½ Islamic punishment tends to be harsh ï¿½ flogging adulterers and that sort of thing ï¿½ but this, Dï¿½Souza says ï¿½with only a hint of irony,ï¿½ simply puts Muslims ï¿½in the Old Testament tradition.ï¿½ Polygamy exists under Islamic law, but the sexual freedom produced by feminism in this country is, at least for men, ï¿½even better than polygamy.ï¿½ And the Iranian president Mahmoud Ahmadinejadï¿½s statement that the West has a taboo against questioning the existence of the Holocaust, while ï¿½pooh-poohed by Western commentators,ï¿½ was ï¿½undoubtedly accurate.ï¿½ Unlike President Bush, who once said he could not understand how anyone could hate America, Dï¿½Souza knows why Islamic radicals attack us. ï¿½Painful though it may be to admit,ï¿½ he admits, ï¿½some of what the critics or even enemies say about America and the West ... may be true.ï¿½ Susan Sontag never said we brought Sept. 11 on ourselves.

Dinesh Dï¿½Souza does say it.

Dreadful things happened to America on that day, but, truth be told, Dï¿½Souza is not all that upset by them. America is fighting two wars simultaneously, he argues, a war against terror abroad and a culture war at home. We should be using the former, less important, one to fight the latter, really crucial, one. The way to do so is to encourage a split between ï¿½radicalï¿½ Muslims like bin Laden, who engage in jihad, and ï¿½traditionalï¿½ Muslims who are conservative in their political views and deeply devout in their religious practices; understanding the radical Muslims, even being sympathetic to some of their complaints, is the best way to win the support of the traditionalists. We should stand with conservative Muslims in protest against the publication of the Danish cartoons that depicted the Prophet Muhammad rather than rallying to the liberal ideal of free speech. We should drop our alliance with decadent Europe and ï¿½should openly allyï¿½ with ï¿½governments that reflect Muslim interests, not ... Israeli interests.ï¿½ And, most important of all, conservative religious believers in America should join forces with conservative religious believers in the Islamic world to combat their common enemy: the cultural left.

The ï¿½domestic insurgentsï¿½ who, in Dï¿½Souzaï¿½s view, constitute the cultural left want ï¿½America to be a shining beacon of global depravity, a kind of Gomorrah on a Hill.ï¿½ ï¿½I intend to name the enemy at home,ï¿½ Dï¿½Souza proclaims, and so he does. Twenty recent members of Congress, including Hillary Rodham Clinton and Ted Kennedy, are on one of his lists, and 17 intellectuals (one dead, one British) are on another, with similar numbers of Hollywood figures, activists, foreign policy experts, cultural leaders and organizations. Some of those he identifies ï¿½ Noam Chomsky, Ramsey Clark, Ward Churchill ï¿½ might not be surprised to find themselves here. Others ï¿½ the sociologist Paul Starr, the historian Sean Wilentz, the clergyman Jim Wallis, the philosopher Martha Nussbaum ï¿½ are less obvious candidates for inclusion. (One person, Thomas Frank, is mentioned on two different lists.) All these people might charge Dï¿½Souza with ï¿½McCarthyismï¿½ for supposedly exposing them, but he accepts the challenge. McCarthy, after all, was ï¿½largely right.ï¿½

Lest one think that Dï¿½Souza exaggerates the danger the cultural left presents to America, he has an ace in the hole to back him up: Osama bin Laden himself. Bin Laden, it seems, has taken pains to identify his natural allies within the United States and regularly engages in ï¿½signalingï¿½ them through videotapes in ï¿½an effort to establish a broader political alliance.ï¿½ In particular, his fall 2004 tape, generally believed to have helped George W. Bush defeat John F. Kerry, contained a secret message to the cultural left that Dï¿½Souza, and Dï¿½Souza alone, has decoded. ï¿½Whichever state does not encroach upon our security thereby ensures its own,ï¿½ bin Laden declared. Anyone who thinks bin Laden used the term ï¿½stateï¿½ to mean ï¿½countryï¿½ ï¿½ common usage in Europe and the Middle East ï¿½ is wrong. He was actually

telling residents of New York and Massachusetts that if they voted for the Democrats, he would refrain from killing them. Dï¿½Souza writes like a lover spurned; despite all his efforts to reach out to bin Laden, the man insists on joining forces with the Satanists.

Dï¿½Souza has fallen on hard times lately. Political correctness and affirmative action ï¿½ the issues he has addressed in inflammatory ways in the past ï¿½ no longer inspire the same passion. ï¿½The Enemy at Homeï¿½ is clearly designed to restore his reputation as the man who will say anything to call attention to his views; charging prominent senators and presidential candidates with treason can do that. (One can dismiss Dï¿½Souzaï¿½s claim that ï¿½I am not accusing anyone of treason or even of anti-Americanismï¿½ as either self-delusional or dishonest; my guess is the former.) Yet despite all his heated rhetoric, Dï¿½Souzaï¿½s book is unlikely to make much of a dent. It relies on a distinction between traditional and radical Islam that even he does not take seriously; there are no theological differences between the two camps, he suggests at one point, and even the ï¿½fewï¿½ political differences between them are disappearing. It is filled with factual errors (Milton Himmelfarb, not Irving Kristol, compared the voting behavior of Jews to that of Puerto Ricans; Diana Eck is not a historian, but Thomas Frank, wrongly identified as a political scientist, is). In a line Dï¿½Souza will surely wish he had never written, he brags of the ï¿½remarkable progressï¿½ in Iraq ï¿½since Husseinï¿½s removal from power.ï¿½ Some of the people he elevates to the status of major enemies of the United States ï¿½ Kristine Holmgren, Robert Jensen, Glenda Gilmore ï¿½ are (no offense intended) anything but household names.

At one point in ï¿½The Enemy at Home,ï¿½ Dï¿½Souza appeals to ï¿½decent liberals and Democratsï¿½ to join him in rejecting the American left. Although he does not name me as one of them, I sense he is appealing to people like me because I write for The New Republic, a liberal magazine that distances itself from leftism. So let this ï¿½decentï¿½ liberal make perfectly clear how thoroughly indecent Dinesh Dï¿½Souza is. Like his hero Joe McCarthy, he has no sense of shame. He is a childish thinker and writer tackling subjects about which he knows little to make arguments that reek of political extremism. His book is a national disgrace, a sorry example of a publishing culture more concerned with the sensational than the sensible. People on the left, especially those who have been subjects of Dï¿½Souzaï¿½s previous books, will shrug their shoulders at his latest screed. I look forward to the reaction from decent conservatives and Republicans who will, if they have any sense of honor, distance themselves, quickly and cleanly, from the Rishwain research scholar at the Hoover Institution at Stanford University.

Alan Wolfe teaches political science at Boston College and is the author of ï¿½Does American Democracy Still Work?ï¿½

I have replaced two capacitors on my icf-sw1 as per information found in this group. At first everything seemed to be all right, but now the radio will work fine the first couple of minutes, but the the audio becomes distorted. I checked the audio on the earphone but it is also bad. My question is, what can I do to fix this problem?

Greetings Floyd!
I have been wanting to get a S-38 E. I think that is the one made in 1954 the year I was born. I know what you mean about the old tubes that glow in the night. My first shortwave was a Heathkit GR-64. I no longer have a tube shortwave receiver as I gave them all away. What was I thinking? I do have some old broadcast receivers of the tube persuasion and a Tempo One that I hope to put on the air.
Anyone out there want to throw out an old tube shortwave receiver give me a holler. I keep looking through the thrift stores but find everything but what I want. Have a great week! Jon in Upstate South Carolina.

If you replaced the capacitors with tantalum type make sure you did
not overheat them. Tantalum capacitors will short out if overheated.

If you need VHF-Low get one of these:

http://www.radioshack.com/product/index.jsp?productId=2102469&cp=2032052.2032075.2032078.2032098&allCount=25&fbn=Type%2FScanner&f=PAD%2FProduct+Type%2FScanner&fbc=1&parentPage=family

You'll need to tighten the hardware in the base.

When I received my review copy of The Enemy at Home: The Cultural Left and Its Responsibility for 9/11 by Dinesh D'Souza my first reaction was "It's about time." Not that there was anything wrong with his recent celebratory books like What's So Great About America or Ronald Reagan; but for my money, the Dartmouth Review provocateur was put on this earth to write books like Illiberal Education, one of the first popular books about campus PC culture, or to drive liberals crazy with well researched skewering of liberal sacred cows like The End of Racism.

The opening to The Enemy at Home made me feel that the wait was worth it. Discussing various reactions to the attacks on 9/11, D'Souza mocks Michael Moore's internet post that Osama bin Laden was aiming at red state America and hit blue state America. He then tackles Jerry Falwell's opposing assertion that abortionist, feminists, the ACLU and homosexuals caused God to "lift the veil of protection" and allow America to be hit. D'Souza comments dryly, "If God was aiming for the abortionists, the feminists and the homosexuals, it seems he mostly killed stockbrokers and soldiers and janitors, some of which were homosexual, but few of whom presumably, had second jobs as abortionists."

That's bracing stuff. But unfortunately, it soon becomes clear that D'Souza 's premise is that Falwell is only wrong about who directed the suicide bombers, but is accurate about the target. He believes that Osama bin Laden was striking back against the abortionists, the feminists the homosexuals-- and the NGOs pushing their agenda worldwide-- by killing stockbrokers, soldiers and janitors.

That's right, Al Qaeda is primarily outraged by the Cultural Left, the rest of us are just collateral damage. I guess 30 Rock and the UN building aren' t on any Afghani maps.

D'Souza lays it out, "The left is responsible for 9/11 in the following ways. First the cultural left has fostered a decadent American culture that angers and repulses traditional societies, especially those in the Islamic world that are being overwhelmed with this culture. This campaign has provoked a violent reaction from Muslims who believe that their most cherished beliefs and institutions are under assault."

While D'Souza goes on to say, "Further, the cultural left as affirmed the most vicious prejudices about American foreign policy held by radical factions in the Muslim world," most of the book is centered on the first assertion. Here we see the seeds of the biggest problem with D'Souza's analysis. While he dismisses as illogical and disingenuous the foreign policy reasons for Islamic radical attacks on the U.S., and as such treats them as mere propagandistic device, he chooses to accept as genuine every radical condemnation of American depravity-and comes very close to treating

them as justification. In short, D'Souza treats Islamic complaints he agrees with as legitimate, and the ones he considers illogical as disingenuous propaganda. And based solely on his handpicked issues, D'Souza takes the unprecedented step of proposing that American conservatives unite with what he calls "traditional societies" worldwide-including what he perceives as the vast majority of the Muslim world-to fight the imperialist cultural left. According to D'Souza, this is the "only way to win" the war against radical Islam.

These are head-spinning thoughts. Because of D'Souza's ignorance of the nature of the enemy--and his overly benign view of the society that bred them--he envisions something like an international version of the Reagan coalition. But this isn't about winning over Evangelical and devoutly Catholic union workers who may have some liberal economic views (and resent being pushed into higher tax brackets) and separating them from the Democrat Party over abortion, gay rights, and the war on Christmas.

There is a big difference between voting against gay marriage, and wanting to put homosexuals in a pit and drop a wall on them. There is no common ground between being against easy divorce to protect women and children, and allowing polygamy for men while allowing no divorce for women. In fact, even the romantic nonsense of liberal definitions of marriage and easy divorce are far superior to the "traditional" view of Islamic marriage. And it's one thing to oppose the UN's forced secularization of underdeveloped countries and to argue that a manger scene will not traumatize passers-by; it's quite another to have the death penalty for blasphemy.

Part of the problem in making a realignment with the other traditionalists, D'Souza thinks, is that the rest of us are too paranoid about theocracy. Apparently too many of us think that it means "rule by divine authority of the priesthood or clergy." That is apparently not correct: D'Souza insists that in Iran "the power of the state and of the mullahs is limited by the specific rules set forth in the Koran and the Islamic tradition. The rulers themselves are bound by these laws."

D'Souza also leaves us behind by taking a benign view of life under Islamic rule in general. Most of his anecdotes, tellingly, are not from people who live in Egypt or Iran, however, but Muslims in India where he grew up. But Indian Muslims, while they may be shocked by American morals, are not signing up to be suicide bombers. (Before he declares there is common ground between mainstream Muslims and the American right on social issues, D'Souza should read Nonie Darwish's great book, Now they Call Me Infidel, which examines the pathologies of life under sharia law, and the deep worldview divide on what D'Souza calls our "common" issues.)

For someone who is making an argument that is downright revolutionary-and proclaims ownership of it nearly as often as the professor in the Monty Python sketch about brontosaurus theory--D'Souza has done very little primary research and relies too often on media-driven cliches. In fact, D'Souza ignores even widely read respected books on bin Laden's history and ideology to put his own particular spin on it.

For instance, in a section decrying the use of the word Islamofascism, D' Souza makes the argument that Osama bin Laden is "one of the world's richest men," despite the fact that Osama has been cut off from the bin Laden fortune for over a decade, as Lawrence Wright reveals in The Looming Tower. D'Souza also dislikes the term, because he says there is a tradition of "capitalism" in the Arab world, who were great "traders." In fact, the Arab world never fully made the leap to free markets from mercantilism, as their economy and society were slave-based and hurt badly by the British campaign to end the trade.

D'Souza does not just take Islamic radicals words at face value; he seems to believe their PR about their resumes, as well. He not only makes mistakes about bin Laden's background, but that of his intellectual godfather, Sayyid Qutb. The following unforgivably sloppy summary of Qutb's background flubs the facts in favor of D'Souza's thesis. "Originally a traveler in literary and pro-Western circles, Qutb became fiercely anti-American after living in the United States. He returned to Egypt, joined the Muslim Brotherhood, and advocated Islamic Radicalism as an antidote to what he perceived as American decadence."

In reality, Qutb was on the road to radicalism in Egypt and came to America ahead of an arrest order from King Farouk. The "decadence" that Qutb encountered was in the dry town of Greeley, Colorado, circa 1949--though he may have been exposed to secularist liberal philosophies at the "progressive," Colorado State College of Education. Someone made the innocent mistake of taking the tightly wrapped Egyptian to a dance in a church basement, and this was his impression: "They danced to the tunes of the gramophone, and the dance floor was replete with tapping feet, enticing legs, arms wrapped around waists, lips pressed to lips, and chests pressed to chests. The atmosphere was full of desire," and so on.

D'Souza uses similar truncation to propose that Osama bin Laden's primary focus is religious devotion, and that his aims have been consistent throughout his career. "Osama bin Laden also endorsed this strategy," D' Souza writes of the idea that a radical Muslim state would be the launching point for jihad. "His main emphasis during the 1980s was on driving the Soviets out of Afghanistan so that it could become a Muslim fundamentalist state. When that was successful, bin Laden returned to Saudi Arabia and focused his effort on changing the corrupt and insufficiently orthodox policies of the Saudi government."

This ignores Wright's well-researched account of the Afghans shunning the bin Ladenites who were more excited about martyrdom than winning the war. D 'Souza discusses the fact that bin Laden lobbied to become a player in the Saudi military during the invasion of Kuwait and only rebelled against the Kingdom after being unceremoniously shut down. However, he incoherently draws the conclusion that even though bin Laden became an outlaw immediately, it was the fact that Americans later stayed and "imported their values" that really bothered him.

In fact, bin Laden's infamous fatwa against America was not issued until 1996, after bin Laden had been kicked out of the Sudan. Wright details the power struggle among the jihadis and how most of bin Laden's cohorts

rejected his new campaign until events left them with little else that could unite their movement.

The book is filled with errors. D'Souza says that al Zawahiri and bin Laden "met in Afghanistan" in the mid to late 1990s, and formed an alliance based on their mutual and independent decisions to declare war on America. They met in Afghanistan, all right, but it was in the late 1980s, and they were together in the Sudan in the mid 1990s. Zawahiri resisted striking America until he was expelled from the Sudan, and had nowhere to go but bin Laden's cave in Afghanistan.

Among D'Souza's solutions to Muslim rage? Conservatives should stop writing books critical of Islam, or holding "silly seminars" on whether Islam is consistent with democracy; stop discouraging the imposition of sharia law; and "level with traditional Muslims and talk sense to them." This, he says, will keep radical Islam from being able to recruit from within traditional Islam. "Conservatives," he concludes, "Must strive to convince traditional Muslims that there are two Americas, and that one of these has a lot in common with them."

Dinesh D'Souza has made arguments that, as he states proudly in the third paragraph of the book, "no one has made before." If you are the only person in the world who believes something, there are only two choices; you are a visionary or a fool.

If you want it to work at its best, you'll get/make a matching transformer, 10:1 ratio, and insert it between them, and most of the time providing a good ground to the appropriate lug of the transformer. Run an appropriate length of coax cable between the transformer and your radio. A Google search will bring up about a million posts on this topic, and several websites that show you how. They are sold on EBay and elsewhere. Don't fear - it is quite simple and quite inexpensive.

For transmit, you may want to use low power - I would not run 1,000 watts through this set up.

Instead, people like Distort d'Newsa feel that we should impose a
society not dissimilar to that of the Taliban or of Margaret Atwood's
novel "the Handmaiden's Tale". (or, for that matter, a society found
in some of the short stories of science fiction writer Robert Heinlein
about the Prophet) - an anti-libertarian religious dictatorship.

Exasperated by the persistent conservatism of their own Southern Baptist Convention, former presidents Jimmy Carter and Bill Clinton are trying to organize an alternative organization for liberal Baptists.
...
The new Carter-Clinton Baptist group would not itself be a new denomination but a coalition of four historically black Baptist communions, plus several more liberal mostly white Baptist denominations, such as the 1.4 million member American Baptist Churches (USA). These denominations belong to the politically left-wing National Council of Churches [which has long record of financial support for Communist regimes].

http://www.discoverthenetwork.com/groupProfile.asp?grpid=6916
...
"We will be addressing issues in nonpartisan ways but in prophetic ways," said the Rev. William J. Shaw, president of the predominantly black National Baptist Convention, USA. In these religious circles, "prophetic" is often a codeword to describe church activism for left-wing causes, dressed up by religious language.
...
Traditional Christians understand their faith through common understandings of God, salvation, and personal ethical behavior. Religionists of the left often see these historic tenets as inconsequential. For many of them, religion is just an instrument for political activism.

Go ahead and hook it directly to a random wire tuner, and simply tune
for maximum loudness on a given frequency. MFJ makes an inexpensive
tuner for random wires.

Yea I've had them do that. I've repaired about five of those. The only way I
got em to work right was replace all the electrolytics. It's a hard job.
Just get a very fine tip iron and a light with a magnifying lens like those
desk ones.

No it will not according to the spec sheet and manual on the Midland website. I have yet to see a "bubble pack" GMRS radio that would. The exception was one obscure Motorola model that is no longer available.

Legislatiion mandating institutionalization for hate speech is long over due in this country. And 90% of you shortwave newsgroupies best get your affairs in order because everyone of you are going - the evidence is preserved!

Grey's' Doctor Is in Treatment

Wed Jan 24, 5:11 PM ET

Isaiah Washington, who does the healing as a doctor on "Grey's Anatomy," is the patient now.

He's in therapy for his use of an anti-gay slur against a castmate.

"With the support of my family and friends, I have begun counseling. I regard this as a necessary step toward understanding why I did what I did and making sure it never happens again," Washington said in a statement Wednesday. "I appreciate the fact that I have been given this opportunity and I remain committed to transforming my negative actions into positive results, personally and professionally."

Washington took a break from filming Tuesday to meet with gay rights activists and offer help in educating the public about the cruelty of such words, an offer the activists called sincere.

Whether Washington was receiving outpatient counseling or had entered a facility was not specified, and the statement did not indicate whether he would miss work on the show.

ADVERTISEMENT

Washington's publicist, Kelly Mullens, declined to comment further. A call to ABC about the effect on production of the hit TV show was not immediately returned Wednesday.

Series creator and executive producer Shonda Rhimes issued her own statement, at once criticizing Washington for his use of the word "faggot" about co-star T.R. Knight and lauding Washington's decision to seek help.

"I speak for all the executive producers here at `Grey's Anatomy' when I say that Isaiah Washington's use of such a disturbing word was a shocking and dismaying event that insulted not only gays and lesbians everywhere, but anyone who has ever struggled for respect in a world that is not always accepting of difference," Rhimes said.

She said she's been working within "the `Grey's family" and with ABC and the Touchstone Television studio to address the issue "in a way

that underscores the gravity of the situation while giving us all a foundation for healing."

"We applaud and encourage Isaiah's realization that he needs help and his subsequent choice to seek immediate treatment for his behavioral issues," Rhimes said.

She expressed appreciation to fans during this "stressful time" and said those involved with the show would continue to "make the best television we can."

It was during an on-set quarrel last October with co-star Patrick Dempsey that Washington reportedly used the slur about Knight, who was not present. Although Washington apologized publicly at the time, the issue boiled up again at the Jan. 15 Golden Globes when he denied using the epithet.

After being criticized last week by the Gay & Lesbian Alliance Against Defamation and ABC, Washington issued an apology.

He met Tuesday with the heads of GLAAD and Gay, Lesbian and Straight Education Network, who said Washington agreed to efforts to fight bias but that no specifics were reached.

AIR Special programs on Republic Day (26 Jan 07)

All India Radio will broadcast special programmes in
connection with the Republic Day Celebrations-2007

25th Jan 2007 - Broadcast of President's Address to the nation - 1400 UTC
onwards.
Freq's : 9835,9575, 5015, 6030, 6085.

25th Jan 2007 - Sarva Bhasha Kavi Sammelan - 1630 - 1830 UTC
Freq's : 7140, 9835, 9575, 6085.

26th Jan 2007 - Running commentary of Republic Day Parade - 0350 - 0645 UTC
Freq's : See below.

29th Jan 2007 - Radio report on Beating Retreat ceremony - 1630 - 1700 UTC
Freq's : 7140, 9835, 9575, 6085.

On 26th Jan 2007 at 0350-0645 UTC the running commentary on the
Republic Day Parade and Cultural Pageant will be broadcast as follows:

Hindi - 6155, 9595, 11620, 15050
English - 6030, 9950, 11585, 15020

Note : 9950 is via Aligarh, others are via Delhi
Look out also for 10330 (Bangalore)

All regional stations of AIR will relay at least one of these programs
on shortwave.

The following changes will be there to the External Services of AIR
on that day:

9910 at 0215-0415 UTC in Pushtu & Dari will be cancelled.
15135, 11830 at 0335 - 0350 UTC in hindi/english will be cancelled.
The Urdu Service will carry the Hindi commentary from 0350
UTC onwards.

Reception reports to: spectrum-manager AT air.org.in

Or can be submitted online at :
http://www.allindiaradio.gov.in/recepfdk.html

dxAce,

Thanks for the heads up about AIR celebrations mate :)

And those those you are interested in celebrations, tomorrow 26 Jan 2007
is Australia Day I'm not sure of any special programming that Radio
Australia, HCJB or ABC may broadcast but who knows may catch something :)

Regards
Mark

While I am a ham and hold an extra class linense, I have found FRS to
be very usefull when doing stuff with non
hams.

Several months ago I was helping a new SWL track down and resolve some
RF noise issues. FRS allowed us to
coordinate the hunt with out screaming our selves silly. CB, FRC, MURS
and even 11M CB all have thier place
in the grand scheme of ways to communicate.

I have found the garden variety Wally World FRS will reach at least 1/2
mile under almost all conditions.
Out in the open they will reach at least a mile under rural and maybe
3/4 of a mile, with luck in more urban
areas. The suburbs are greater then 3/4mile but less then a mile.

Terry

For receive only, a longwire balun. Palomar (sold by Palomar
Engineers) and RF Systems (sold by Univeral Radio) are very good ones.
There are less expensive ones, too, but after a point, you get what you
pay for. Or you can roll your own if you feel so inclined. Plans for
them are not hard to find.

Depending on the length / height of the wire and the front end
characteristics of the radio, a passive preselector might be a good
accessory, also.

2137. MI5 Persecution: Toronto Freenet supports free speech (150)

Newsgroup: rec.radio.shortwave
Date: 2007-01-25 19:36:01 UTC
From: MI5Victim@mi5.gov.uk
Message-ID: <m07002520302347@4ax.com>
Source record: 104040
Cross-posted to: mailing.freebsd.cvs-ports,alt.cellular.sprintpcs,rec.radio.shortwave,be.burgerrechten,alt.pictures.erotica.longlegs

Despite an orchestrated campaign of attempted censorship by UK-resident newsgroup readers, TFN did not bow
to demands for a suppression of freedom of speech. TFN general policy on the matter is as follows;

Draft Policy on Account Deactivations due to News Group Postings
==========

News group postings occasionally take the form of a message which goes against the "topic" of the conference.
For example, a derogatory message about Canadians in the soc.culture.canada.

Members of such news groups then may send a message to the system administrators asking that a user's account
be terminated because of such posting.

The Toronto Free-Net Board of Directors has taken the position that the only postings that will get a person's
account terminated is material that is illegal under Canadian law. Otherwise, the Toronto Free-Net will not
take any action.

Freenet Executive Director Mike Anderson had this to say regarding the continued attempts of a minority of usenet
participants to have my account on his system deactivated;

The TFN's policy is not to take action against members unless they contravene the Criminal Code of Canada, or
engage in practices such as forgery, attacks against other computer systems or mailbombing.

Mr. Corley, while possibly being very annoying, has not contravened the TFN's policies. The TFN believes strongly
in freedom of expression, while recognizing that the price for such freedom may be a high signal-to-noise ratio in Usenet.

If Mr. Corley breaks the law, we will take action -- until then, he has the same rights as any TFN member to post
to Usenet newsgroups. Actions such as mailbombing the TFN in protest will be met by strong complaints to the
originating site's postmaster. The best defense against unwanted postings may be simply be to ignore them and deny
the poster an audience.

TFN Executive Director Toronto, Ont CANADA

Personally, I find it gratifying that my contributions to usenet discussion are recognized as being conducive
to a high signal-to-noise ratio by their quality and thoughtfulness.

The website of the governmental Islamic Republic of Iran Broadcasting (IRIB) has posted a lengthy document titled "The World toward Illumination." The document is a transcript of an IRIB series on the imminent arrival of the Mahdi, the Twelfth or Hidden Imam, awaited by Shi'ites as the Messiah.

The program describes in glowing terms the messianic age to be inaugurated by the Mahdi. He is to begin his uprising in Mecca, and then march on Iraq, where he will establish his "seat of world government" in the city of Kufa and subjugate the current world powers. This will be an age of unparalleled happiness; there will be completely new technologies at mankind's disposal, and "corruption, war, and rebellion will no longer exist." Neither will "liberal democratic civilization."

Subject: BBC's Hidden Shame

Remember the two-way televisions in George Orwell's 1984?
The ones which watched you back? Which you could never get
rid of, only the sound could be turned down?

Well the country which brought Orwell into the world has
made his nightmare follow into the world after him.
Since 1990 the British have been waging war against one of
their own citizens using surveillance to invade privacy
and a campaign of abuse in the transmitted media in
their efforts to humiliate their "victim".

And the most remarkable thing about it is that what they
do is not even illegal - the UK has no laws to protect
the privacy of its citizens, nor does it proscribe
harassment or abuse except in the case of racial abuse.

A lot of people in England know this to be going on,
yet so far they have maintained perfect "omerta";
not a sound, not a squeak has escaped into the English
press, and for all the covert harassment absolutely
nothing has come out into the public domain.

Have the British gone mad? I think we should be told.

Newsgroups: alt.conspiracy
Subject: Re: BBC's Hidden Shame
Date: Mon May 8 05:32:13 1995

Mmmm.

Who, exactly is this victim you're talking about?

First up, Britain or the UK (not 'England' - England is
a part of Britain, like Kansas is a part of the USA) does
have laws that protect the individual from harassement -
you can't just threaten people willy nilly. There are laws
against that. And if someone lies about you in the press
or tv then you have recourse to libel/slander etc. laws.

True, Britain has no 'privacy' laws as such, but isn't that
a good thing? As of this moment, the govt. are considering
a privacy law, but it is unlikely to succeed. Why? Because any
such law would benefit the priviledged and those in power.
Privacy laws, while supposedly protecting the individual, help
those in power hide their mistakes/scandals. They stop the press
etc. investigating. Privacy laws are undemocratic - they prevent
the people from keeping an eye on govt.

And stop looking for some kinda conspiracy in the British
press. It's hardly perfect, but your notion that they don't
cover/campaign against press legislation, harrassment,
discrimination, human rights etc. is plain wrong. You've never
seen a British paper in yr life.

You clearly have a specific case/individual in mind. Speak up!
The thought police aren't coming round just yet.

Douglas.

Date: Mon May 8 19:21:28 1995
Newsgroups: alt.conspiracy
Subject: Re: BBC's Hidden Shame

Confession time - the victim is/was me (except my name isn't
Corley, but that's irrelevant). What happened was not threats;
just invasion of privacy, in a partiicularly flagrant and
shocking way, in a way which most people would consider to
constitute harassment.

You know there's a particular category of person with mental
illness to whom TV and radio "talk", ie they feel the broadcast
is directed at them in particular? This happpened to me,
quite some time ago in the UK (I'm originally from London,
so I've seen plenty of British media print and other).
They invaded my home with their bugs, they repeated what I
was saying in the privacy of my home, and they laughed that it
was "so funny", that I was impotent and could not even communicate
what was going on. Who did this? Our friends on BBC television,
our friends in ITN, last but not least our friends in Capital
Radio in London and on Radio 1.

How did they do this? I'll give you an example. About a year ago,
I was listening to Chris Tarrant (Capital Radio DJ among other
pursuits) on his radio morning show, when he said, talking about
someone he didn't identify, "you know this bloke? he says we're
trying to kill him. We should be done for attempted manslaughter"
which mirrored something I had said a day or two before
(I'm not paranoid, honest!). Now that got broadcast to the whole
of London - if any recordings are kept of the shows then it'll be
there.

You mean the category where they think that everyone is after them ? that
one ? So lets get this straight you know you are paranoid and you think
that they are out to get you ? Uh huh, try putting the two together and
see what you come up with.

>quite some time ago in the UK (I'm originally from London
>so I've seen plenty of British media print and other).

>They invaded my home with their bugs, they repeated what I

>our friends in ITN, last but not least our friends in Capital
>Radio in London and on Radio 1.

Oh yeah, I can see it now. All of them banding together, in a united effort against one man. So ITN, the BBC, and Capital all decide to sit round the table and they come up with idea of breaking into someones house, putting bugs everywhere, listening in to his conversation, and shoving it out on the news everyday. This someone has nothing to do with politics, or business, or entertainment, just an ordinary Joe Bloggs who seems to be extremely paranoid.

Have some sense, grow up and smell reality. What you are talking about would take loads of planning, tens of thousands of pounds and lots of people involved in the planning, execution and maintenance of it. You must have a very high opinion of yourself to think you are worth it.

>How did they do this? I'll give you an example. About a year ago,

>(I'm not paranoid, honest!). Now that got broadcast to the whole
>of London - if any recordings are kept of the shows then it'll be
>there.

Of course you are not paranoid, just slightly mad. Did you ever look for the bugs in your house ? If not, why not ? I mean if I thought that was happening to me, I'd search the place from top to bottom, I mean I live there I would know if anything was out of place. If I was really paranoid, whoops I mean suspicious, I would call in one of those bug detection teams which have those machines that pick up the transmitted radio waves. This reminds me of BUGS, that new programme on BBC1 on saturdays which is all about this kind of stuff, but, shown as a drama / thriller. I suppose thats based on you as well is it ?

>is that there is a conspiracy in Britain, that it encompasses the
>broadcast media, and there is no way of breaking the conspiracy.
>The people who are involved in it will not open up.

What a load of jolly hollyhocks, I would say something else but, apparently students are not allowed to swear on newsgroups in case it damages the reputation of the university or some such jolly hollyhocks.

This guy is extremely paranoid to suggest that the entire British media is after him in such a big way. He gives no real reason as to why they are after him, just that he suffers/suffered from a slight mental disorder, could it be paranoia perhaps ?? No surely not.

I put it to the house that he has never recovered from this mental disorder, lets come out with it and call it paranoia, and thinks everyone is after him. Remember just because you aren't paranoid, doesn't mean they aren't after you.

This guy has a serious problem to suggest that the media would go to such lengths just to single out and ridicule one person. I mean apart from anything else, we (the listening masses) wouldn't be interested unless it concerned the royal family, politicians or showbiz personalities. e.g. the camillagate tapes. I would think that almost everyone, no matter how much they went on about infringements of privacy read the transcripts with interest. I really don't think that Joe Bloggs ordinary guy or paranoid nutter would have the same appeal. Well actually I dunno. :)

Regards,

Paul.

That is what happens in big cities. Hell, it scared me to death when I first started working in Manchester. People keep talking to me on the streets, even if its just to say hello, and I've no idea who they are. This happens to most people, don't worry about it.

>>paranoid, whoops I mean suspicious, I would call in one of those bug
>>detection teams which have those machines that pick up the transmitted

>That's exactly what we did. We went to a competent, professional detective
>agency in London, paid them over 400 quid to debug our house. They found
>nothing.

Doesn't this suggest to you that there are, in fact, no bugs to be found?

>Over Easter I went to the police in London, telling them basically
>what I've posted here. I don't think you'll be surprised to learn
>that I didn't get very far; they asked "why would they be doing this to
>you in particular?" and the answer "they are because they are" doesn't
>go very far.

Exactly. All you have offered so far as proof of your harrassment by these people is:

1) Someone on radio said something that you had recently said
and
2) People on the streets seem to recognise you.

These are both perfectly normal occurences and happen to lots of people every day so it is unsurprising that people here, and the police, are not taking you seriously.

Trying to always keep an open mind about things I would say that one of three things is likely.

Either there is a lot more to this that you are not telling us, or you are messing about or you have some genuine delusions. I'd like to think that in

two of the three cases you would find some real support here, but it seems
unlikely I'm afraid.

>started working in Manchester. People keep talking to me on the streets,
>even if its just to say hello, and I've no idea who they are. This happens
>to most people, don't worry about it.

The key is the pattern, or a change in the pattern. I've lived in London
almost all my life, and just walking around the streets, I never got
hassled by anybody. All of a sudden, people start harassing you,
throwing abuse at you, behaving as if they know you personally, as
if they've seen you before somewhere. I read in the papers that this
happens to Colin Stagg and people like that Eastenders actress, but
they've had their picture in the paperes, so that is understandable.
In a couple of cases people have even known my name - when I was in
London over Easter I was walking down Shaftesbury avenue in the
West End when somebody (no idea who they were, just some bloke with
his girlfriend) called me by name - quite clearly, and my name is
distinctive. This also happened once about four 1/2 years ago, onn
the tube - some blokes I had never seen started chanting my name
and a term of abuse.

It's the pattern which convinces me there's something to it - and
would convince any impartial abserver who could see things tyhrough
my eyes.

>Doesn't this suggest to you that there are, in fact, no bugs to be found?

There's a little story behjjind this. First iof all, in 1992 I worked
for a company where the people made clear they knew what was going on,
first of all directly (the very first evening I was there I went out to
the pub with them and the Technical Directpor said to another guy,
"is this the bloke who's been on TV?" "yeah, I think so") and also
indirectly, by rep[peating stuff I was saying at home in London and
in my rented accomodation there (I moved several times in the course of
1992 and they followed me each time). Now, if "they" (the buggers)
knew their bugs could be found easily, they wouldn;'t be keen to make

their existence known, would they?

Also, in summer 1992 I went on a trip abroad to Europe by coach, and
on the way out there were a couple a little younger than myself on the coach
a bloke and hius girlfriend. He said things about some bloke who was
never named, who sounded exactly like me - and he made explicitly
clear that our house was bugged, and that a neighrbours house was
bugged (and at work they'd been rep[earting what was said at the
neighbours, so this looks like independent corroboration).
They also said stuff like "at school he was always really streesed,
they found someone from his school and he was a real psycho"
and that "he was in a B&B for one night and they got him", dead right
again, I had been in B&B for once night a few days before this trip
and weatching the news again got a reaction from the newsreader.

Subject: Re: BBC's Hidden Shame

>:some pirate radio station in London in 1991, started listening to
>
>Conclusive proof if ever I heard it.
>
>Of course you were the only person in the office in the whole of Britain

Yeah, but this is the point. Each incident is easily and automatically deniable along the lines you're taking. But when this happens every time, and when you get independent corroboration from other people, then there's no escaping it. For example, immediately after I lost my job in 91 I went into the local garage to get some work done on the car, and one of the blokes there said to the other, "so what do you think of it then? it's getting killed on the radio isn't it"
Now again, you look at that and no proff; you can ask them what they're referring to and they can say they're talking about something else.

>I know you may be a little paranoid, but I suggest you sit down
>and work out rationally what possible reason anyone off television,
>or radio would have for listening to your conversations. After all
>it must be hard enough to present a show to millions of people
>without the added burden of watching and listening to a single
>person and slipping their phrases into the programme.

These presenters are clever people. They wouldn't be presenters if they weren't - they're easily capable of reacting to an individual in this way.

What possible reason? I guess because they think it's amusing to do so. They know that if you ever tell anybody, without being able to show any evidence, then the reaction you'll get from just about anybody will be the one you're showing now.

I realize there are loads of people in England and elsewhere with the sort of thoughts I've described in these postings; and almost all impartial observers would say that nothing other than an go after their private conversations (if they did it to me then I can do it to them, it's a questions of technical competence and money). If you were lucky, you might be able to entrap them into admission. You could of course harass or threaten them back (any coppers reading this?) but that would be illegal and might get a result quite different to the one you're trying to achieve. Of course, it might

come out of its own accord given time - if so many people know, if
they have an escape valve in their "subtext" through the media,
will it not cease to be at a covert level, given time? Surely it
is in my interest for it to become overt, since the transgressions
at this time are on their side and not on mine?

Thoughts? There must be some way of breaking the secrecy. This
isn't the first time in human history that a conspiracy has taken
place on this scale, but the truth tends to out. The situation
now is they think they';re "winning" hence have little stimulus
to change the rules - if they started seeing themselves "losing"
things could change drastically.

: things could change drastically.

Mike, if that is your name,

I'm going to try to rationalise what you're telling us. I can think of three
possible explanations for what you are experiencing.

One is that there _is_ a conspiracy against you. As a previous writer said,
though, a lot of these programmes are taped, so it really isn't possible in
some of the cases you've named. Further, why were no bugs found in your
house? Finally, unless you are a political figure or someone else in the
public eye, why would anyone bother? People like me (and I assume you) are
small fry; our contribution to society is likely to be minor. Why would
anyone spend so much money and effort on you?

Another possibility is that you are developing some kind of paranoia. There's
no stigma attached to this; we're all paranoid to some extent, although
perhaps not to the extent that a doctor would call us paranoid. I think
paranoia is quite a straightforward explanation here - you really do believe
that all these things are aimed at you; you see people everywhere trying to
get at you. Logic suggests that this cannot really be the case.

The third possibility is that not even you really believe any of this, and
that this is a "troll". I'm not sure I believe this possibility, but it's
possible.

Anyway, if you want to be sure that you're _not_ going mad, I'd go and see
your G.P. if I were you. If you don't trust him/her, why not see someone

recommended by a person you can trust? If you don't trust anyone any more, don't you think it's time you got help?

For a troll, the posts are remarkably well-informed on paranoid behaviour.. you'd need to be one, or be reasonably well-informed on the subject to sustain the tale... which lead me to my theory...*ahem*...:

An extension to possibility 3 (Number 3.5, perhaps?) is that the original poster may be somehting like a psychology student writing a term paper on the net community's reactions to this tale. (Now, there's paranoia for you! Not only are they listening to/watching us, they're writing reports about us too...:-)

More likely, though, is that the poster is genuinely in need of professional help (he has intimated as much, himself) and, as such, he should be encouraged to seek it.

Newsgroups: uk.misc
Date: Tue Aug 1 10:23:46 1995

>OK, so instead of my posting the same tedious stuff every day,
>why don't you actually read the contents, and make a meaningful
>reply? Something more constructive than those silly little
>jokes about paranoia perhaps? Like what objectively can you do
>to break the conspiracy open, if one exists :-) ? If somebody
>did it to you, what would you do?

But we've *done* that. I certainly have at least. Way back when you
originally started posting and your posts were neither tediously repetitve
nor stupidly long.

But whenever anyone makes any good suggestions you ignore them and start
posting from the begining again. You don't want us to help you - so what do
you want? If you really wanted help you would listen to peoples suggestions
and respond to them. Is this just an attention thing?
But I'll try again, because I'm a fool like that.

>o Tell people about it, go to the police / legal services
> Done that; those around me either don't believe me, or they
>"sort of" believe but can't do anything about it. As for going
>to the police; I did, over Easter. Discouraging. They must be
>familiar with the occasional person walking into a station with
>this sort of story. "If a psychiatrist says you're imagining
>it, then that's what it is".

You haven't yet given any examples of anything concrete to suggest that this
is really happening to you. This, I would imagine, will be the stumbling
block for the police. How can they possibly help you when your only evidence
is a jumbled mess of TV presenters saying things that could be construed as
answers to your comments and the 'feeling' that people are talking about you
and watching you?

I seem to recall that last time this was being discussed someone asked if you
had been to see a psychiatrist about this - after all if this is really
happening then you have can only benefit from being given a clean bill of
health. I don't recall an answer.

> I also went to a firm of solicitors; again, very
>discouraging. Put bluntly, they can't deal with cases where the
>perpetrators aren't well-defined and the existence of the crime
>itself is unprovable.

Well how could they? Who would you sue? The country?

>o so if that option is out, what's left? well, there's the
>"do nothing" option. To some extent this option works. They've
>spent a lot of money and ultimately achieved nothing except to
>force me out of the country - which has been an own goal for
>them, since now they can't do what they were doing in the UK.
>Expenditure of further resources would feed the pockets of
>their greedy contractors, but is a waste of money as far as the
>employing organization is concerned.

So you are no longer in the uk? And this is not happening anymore?

Then let it go. Just leave it alone and get on with your life. Its just not worth it. There is nothing you can do to prove that this happened whether it did or did not. So forget it. Go and explore the net - when people aren't spamming it with useless repetitve posts there's a lot of interesting and worthwhile things out there to see and do. Likewise real life (I'm told *&).

>completely conventional, I have a good academic and work
>record. Until all this started, I had no mental health
>problems; the diagnosis of illness was only after 2 1/2 years
>of abuse. If they did this to me, they could do this to
>absolutely any British citizen. If this stuff gets out, it
>won't be me that has to worry - it'll be them. They take a
>normal person, lie about him, demonise him, try to force him
>into killing himself - and this is in a country where the rule
>of law applies?

If this gets out then *that* will be the time to bring your claims to the foreground.

The only thing ruining your life right now is you, Mike. And the only thing that will make your life any better now is also you. So go and make your life better and show them that they failed.

Claire

==========

>But we've *done* that. I certainly have at least. Way back when you
>originally started posting and your posts were neither tediously repetitve
>nor stupidly long.

Once again we're running into a brick wall. The reason I started posting was because I couldn't figure out a way out of the situation, and thought that saying it out into the open would provide a catalyst for one of those "in the know" (there are plenty in this category, and it's a fair

bet that some of them are reading this) to speak up.

It hasn't worked, yet. A little more aggressive shit-stirring (excuse expletive) might do the trick. Perhaps Usenet posting is the wrong arena for this sort of activity; although obviously it does have the advantage of rapid feedback.

Thing is, for people to open up, you would have to provide them with a reason why it would be in their interest to do so. There's no obvious way of doing that; to get thinking people to incriminate themselves when they're safe in denying all knowledge is not a trick I can figure out how to do.

>But whenever anyone makes any good suggestions you ignore them and start
>posting from the begining again. You don't want us to help you - so what do
>you want? If you really wanted help you would listen to peoples suggestions
>and respond to them. Is this just an attention thing?
>But I'll try again, because I'm a fool like that.

A "good" suggestion would be one which had the effect of halting the persecution, which so far hasn't happened. If you make a "good" suggestion then damn right I'll stop posting - because then I won't have to.

>You haven't yet given any examples of anything concrete to suggest that this
>is really happening to you. This, I would imagine, will be the stumbling
>block for the police. How can they possibly help you when your only evidence
>is a jumbled mess of TV presenters saying things that could be construed as
>answers to your comments and the 'feeling' that people are talking about you
>and watching you?

Because, as said previously, concrete proof does not exist. If it existed then I wouldn't be talking to you - if it could be proved, or if those doing it could be found, they wouldn't be able to continue.

What's happened is all conversation. You can't prove conversation, not without a tape recorder, and even then you would have to prove that what they meant corresponded to what you understood.

The psychopath who manages the Applics group at my previous employers played little word games, not only with me but with at least one other person in the group; words which rhyme with swear words, words which are ambiguous, eg "bent", words which rhyme with wank, "sheet" rhymes with shit, end (how was your weak end? being the standard salutation on a Monday morning). Sounds childish, most people would easily tell him to fuck off; except to people with predisposition to depression and the inability to express themselves (this was before I started taking medication), that sort of nastiness is not bearable. After ten months of this I was so ill I was crying constantly, eventually I went into hospital and started on medication. Somebody else he did this to (over a year later!) got so depressed he took an overdose of pills, had to go on antidepressants and left.

And where does the "concrete proof" of this trouble exist? NOWHERE. Even if you had physical evidence, even if you had the presence of mind to record what was said, how could you prove what he actually meant by what he was saying? In some cases of harassment you can prove what was done,

because it's undeniable. But when the harassment is done with any presence of mind whatsoever, it becomes difficult. In the case of the wider harassment, the people doing it obviously know what they're about - they must have done similar things to other people before in one form or another, and they know what they can get away with, they know what the police will do nothing about.

>I seem to recall that last time this was being discussed someone asked if you
>had been to see a psychiatrist about this - after all if this is really
>happening then you have can only benefit from being given a clean bill of
>health. I don't recall an answer.

Yes. The reply was of the "neither confirm nor deny" variety. Not much else they can say, is there?

>Well how could they? Who would you sue? The country?

Hmmm, now there's a thought... :-)

>If this gets out then *that* will be the time to bring your claims to the
>foreground.

Wrong way round. It won't get out unless I do something to bring that about; remember, it isn't in THEIR interest for THEIR criminality to be exposed. Yelling loudly on Usenet might nudge things along in the right direction.

>The only thing ruining your life right now is you, Mike. And the only thing
>that will make your life any better now is also you. So go and make your
>life better and show them that they failed.

Ignoring them would be bliss, but it's not a winning strategy.

There are going to be more of these posts. Sorry. That's the way it is.

2149. MI5 Persecution: But why? 2/8/95 (4675)

Newsgroup: rec.radio.shortwave
Date: 2007-01-25 21:15:49 UTC
From: MI5Victim@mi5.gov.uk
Message-ID: <m07002522101153@4ax.com>
Source record: 104151
Cross-posted to: mailing.freebsd.cvs-ports,alt.cellular.sprintpcs,rec.radio.shortwave,be.burgerrechten,alt.pictures.erotica.longlegs

>Very unstructured, no proof whatsoever. So why should anyone
>take it seriously? If I said to you, "my next door neighbour eats
>babies", how much credibility would you attach to that?

Well, cos it's true. I was hoping that someone "in the know" would
appear and make some self-revealing comments, but that hasn't
happened. Everyone's keeping quiet. What a pity.

>>This is an agglomeration of articles and replies previously
>>posted to Usenet, so it's a bit hard to read. This posting
>>describes a campaign of character assassination initiated

>Who's character is being assassinated? It isn't clear from the post.
>Are we talking about Grenville Janner? I thought he was a spook
>himself? He's certainly able to hold his own on the issue you cite.

Mine, mainly. The reason for putting that episode at the top
of the posting is that they tried to kill two birds with one stone
at the Beck trial - they simultaneously put words into the mouth
of their invented "witness" to smear Janner, and repeated exactly,
word-for-word, stuff which had been said by and about me.

That was the only occasion (the only one recognizable to me,
anyway) when they went after another target at the same time.
And it's quite lucky they did that - because it could give some
pointers to who they might be.

Presumably there are people still around who were involved in
that trial, and know what happened. Beck might be dead, but the
"witness" would still be around, as would Beck's solicitor.

>>by a group of people or agency within the UK. Although
>>they have never presented their identity, you can draw
>>your own conclusions on that point. There aren't many
>>people with the technical resources and contacts in
>>society to make feasible the sort of deliberate attack
>>on an individual which is described in this article.
>
>There aren't _any_ as far as I am aware.

I'm afraid there are.

>>The most disturbing part of the whole episode is the
>>participation of British institutions and their members, fully
>>comprehending what they do, in what is an act of attempted
>>murder against a British citizen.

>
>The whole society, in fact. From the top to the bottom. They
>wouldn't be trying to tell you to kill yourself by any chance,
>would they?

You got it. I'm a popular guy.

>>After the trial Janner said that "now he knew what it felt like
>>to be a victim of Beck's"; but, it wasn't Beck who set up the
>>attempted character assassination on Janner; the fact that they
>>took a side-swipe with their verbatim repetition shows
>>where the real source is to be found.
>
>The newspapers?

Well, your guess is as good as mine. But what newspaper would
send a team after someone for five years? I don't think so,
somehow. Of course they could, but it wouldn't be in their
commercial interest.

You'd have to look at a corporate entity which would indulge in
activity of this type, and the nature of the contacts they have
narrows down the search.

>>The goons behind the molestation are lower than the paedophiles
>>they use to convey their propaganda - they use the same
>>strategy of covert abuse, but there is nobody to check their
>>actions, or to bring these criminals to justice.
>
>Ummm.. Janner is a Barrister, a journalist who writes on a wide
>variety of issues, and a long-standing Labour MP. If he's unjustly
>smeared, he's more that capable of setting the record straight.

Janner blamed Beck for the invention. He didn't say anything about
it having any other origin. Even had he suspected any other source,
he could hardly have pointed the finger without some evidence.

>You say that the media is making similar allegations about you in
>relation to this issue? So, you're accused of child abuse, amd
>the allegation was reported in the media, I assume.

I've been accused of many things although that wasn't one of them.
Most of them have been yelled in my face by people on the street
in London at some time or other. Bit difficult to misinterpret
when that happens.

>What exact;y are they saying about you? (Respond here please. I'm
>leaving the UK tomorrow, so I can't read e-mail.)

It changes with time. Every so often, they sing a new song;
so at one point the allegation was homosexuality, at another
is was low intelligence, then it degenerated into sexual abuse.

<snip>

>>They invaded my home with their bugs, they repeated what I
>>was saying in the privacy of my home, and they laughed that it
>>was "so funny", that I was impotent and could not even communicate
>>what was going on. Who did this? Our friends on BBC television,
>>our friends in ITN, last but not least our friends in Capital
>>Radio in London and on Radio 1.
>
>How do you know this? Just from what you hear on the radio?

I can't remember if this was mentioned in the "regular" posting,
but on a few occasions they set me up with people nearby to talk
about me, or more correctly, to talk about somebody who
(in their minds) "resembles" me, with actually naming me.

One such occasion was a coach trip to Europe in June 1992.
The "set up" comprised a guy talking to a vacant giggling female
about "this bloke", who was never named. Apparently "they"
(also never named) "found somebody from his school",
"they" "got" him at his house and at a neighbours, and at
a B&B where their target was for one night.

Apart from that, yeah, from "what I hear on the radio". And
from what I see on TV. (I wouldn't be doing my job as a
mentally ill person properly if the TV and radio weren't
talking to me, now, would I?)

>>Oh yeah, I can see it now. All of them banding together, in a united
>>effort against one man. So ITN, the BBC, and Capital all decide to sit
>>round the table and they come up with idea of breaking into someones
>>house, putting bugs everywhere, listening in to his conversation, and
>>shoving it out on the news everyday.
>
>But why would they do this? What possible reason would they have?

But why get at anybody? Victimisation is the pastime practised against
other people; as the scorpion said to the frog, "it's in my nature".

>Are you aware that what you describe is also a common symptom of people
>who are suffering from a psychiatric illness? Have you been to your
>doctor and told him about this? Did he prescribe any medication? Have
>you been taking it, or have you stopped?

Yes, Yes, and Yes respectively. Still taking it. Doing quite well actually.

>>This someone has nothing to do with
>>politics, or business, or entertainment, just an ordinary Joe Bloggs who
>>seems to be extremely paranoid.
>
>Usually a clinical symptom rather than proof of a conspiracy in such
>matters.

>>How did they do this? I'll give you an example. About a year ago,
>>I was listening to Chris Tarrant (Capital Radio DJ among other
>>pursuits) on his radio morning show, when he said, talking about

>>someone he didn't identify, "you know this bloke? he says we're
>>trying to kill him. We should be done for attempted manslaughter"
>>which mirrored something I had said a day or two before.
>>Now that got broadcast to the whole of London - if any recordings
>>are kept of the shows then it'll be there.
>
>And this is supposed to mean... what? Chris Tarrant is in on this plot
>to kill you? It sure sounds like a joke to me. When you start to get
>ill, the mind often makes connections that seem logical and lucid to
>you, but do not to the rest of the world. This is one of those connections.
>They are usually known as delusions.

This is the problem, and there doesn't seem to be any way around it.
If a clearly sane person reported this persecution, you might believe
him, but probably you'd tell him to go see a doctor to "verify his
sanity". If someone with the illness of which you could argue these
things to be symptomatic says these things, again, you might believe
him, but it would be unlikely - the easiest route is the one you are
taking in the above paragraph. The only way I can convince you of what
I am saying is by giving precise details of what, when, how - and for
most of that stuff is based solely on memory.

To prove it would require an admission from somebody, or else hard
proof in the shape of physical evidence such as tape recordings.
Of course, I don't have that.

>The idea of a "pattern", and the notion that if anyone could look
>through your eyes they would see the same thing is very indicative of
>the onset of a psychiatric illness. Schizophrenia and manic depression
>have similar symptoms. I'm not trying to be disrespectful here.
>This may be an illness and it can be managed by the use of medication.
>If it _isn't_ treated, it can lead to terrible tragic consequences.

I'm quite aware what the symptoms would be, and that the reality
corresponds to those symptoms.

But if anything, that is an argument which could convince you of
the truth of what I'm saying. If they deliberately set out to
simulate the symptoms of schizophrenia - in other words, if they
know through observation that their target is either suffering
from the illness, or is on the borderline and could be pushed in
with an appropriate stimulus, then they can feel safe in what
they do, since once you are registered as suffering from the
illness, people will assign less credibility to assertions that
persecution is based in reality.

That this can happen, and people collude by silence, is absolutely
horrifying. It is all the more horrifying that it can happen in a
country such as Britain which has no history of repression.
Perhaps its happening in the UK is due to the arrogant assumption
of moral superiority on the part of those in the media and others
involved - we won the last war and we can keep harping on about

German and Japanese war crimes, so we can do whatever we like and
we'll be right, up to and including destroying the lives of our
citizens (as long as we're not caught doing it).

>>That is the level it's at - basically they show they're listening
>>to what you're saying at home, they show they're listening to you
>>listening to them
>
>But why? And why you? Do you realize how much it would cost to keep
>one person under continuous surveillance for five years? Think about
>all the man/hours. Say they _just_ allocated a two man team and a
>supervisor. OK., Supervisor's salary, say, ?30,000 a year. Two men,
>?20,000 a year each. But they'd need to work in shifts -- so it would
>be six men at ?20,000 (which with on-costs would work out at more like
>?30,000 to the employer.)
>
>So, we're talking ?30,000 x 6. ?180,000. plus say, ?40,000 for the
>supervisor. ?220,000. Then you've got the hardware involved. And
>any transcription that needs doing. You don't think the 'Big Boss'
>would listen to hours and hours of tapes, do you.
>
>So, all in all, you couldn't actually do the job for much less than
>a quarter million a year. Over five years. What are you doing that makes
>it worth the while of the state to spend over one and a quarter million
>on you?

Those are pretty much the sort of calculations that went through my
head once I stopped to consider what it must be costing them to
run this little operation.

The partial answer is, there have been periods when the intensity has
been greater, and times when little has happened. In fact, for much
of 1993 and the first half of 1994, very little happened. Although
I don't think that was for reasons of money - if they can tap into
the taxpayer they're not going to be short of resources, are they?

The more complete answer is in the enormity of what they're doing.
When countries kill their own people, as a rule, they get found
out and all hell breaks loose. This isn't some para shooting
Irish teenagers in the back. This is something which permeates
English society, which they are ALL responsible for, and which
they cannot escape responsibility for.

Relative to the cost to British pride of seeing their country
humiliated for the persecution of their own defenceless citizens,
isn't is worth the cost of four or five people to try to bring
things to a close in the manner they would wish? To the
government a million or two is quite honestly nothing - if they
can convince themselves of the necessity of what they're doing,
money is not going to be the limiting factor.

>>What possible reason? I guess because they think it's amusing to do
>>so.
>
>What? Spend a quarter mil. a year to amuse themselves? And why not
>change every now and again? Why keep watching you? (Unless you _are_
>doing something, and I don't think you are, though you may have some
>deep, dark secret in your past.)

See the above.

==========

>>I'm going to try to rationalise what you're telling us. I can think of three
>>possible explanations for what you are experiencing.

>>Another possibility is that you are developing some kind of paranoia. There's
>>no stigma attached to this; we're all paranoid to some extent, although
>>perhaps not to the extent that a doctor would call us paranoid. I think
>>paranoia is quite a straightforward explanation here - you really do believe
>>that all these things are aimed at you; you see people everywhere trying to
>>get at you. Logic suggests that this cannot really be the case.

>I think the evidence leans towards this explanation myself. Why not
>try soc.support.depression and see what some of the people there have
>to say about this? Just to get some more perspective on your perspective,
>so to speak?

Sure, it "leans" towards it. But please at least admit there is a
POSSIBILITY of it being very real. And once you've done that, can
you come up with some thoughts on methods of proof? I may be missing something
in my assessment - there may be a way of proving it, in the face of non-
cooperation from the "players".

2150. Blogger vs. Disney Hot Talk Radio

Newsgroup: rec.radio.shortwave
Date: 2007-01-25 21:19:07 UTC
From: Tester <teest@test.org>
Message-ID: <rg6ir2ls88qrjk5mmet71lsh5vd5ugb0o9@entropy.org>
Source record: 104044

A blogger (spockosbrain.com) has been recording some of the more dubious sound bites from conservative hot talk station KSFO in San Francisco and been posting them and bringing them to the attention of advertisers some of which have pulled their ads.

Disney's lawyers screamed "copyright violation" and took down the website but, of course, the sound bites have now spread.

Some of the sound bites mention torturing people with by attaching a battery to the testicles or shooting people although at least in the version I heard (which had such music as "when you wish upon a star" in the background) it sounded like the sort of sophmoric jokes one hears on the "morning zoo" type program.
.
Maybe if they had access to the Vin "San Fils" (wireless) served at the BBC canteen rather than the Thunderbird and Old English Malt Liquor which seems to inspire jokes at these stations they could come out with better jokes.

>Hmmm, strange eh.
>I mentioned all this goings on to my boyfriend, who works for the
>British intelligence service, and he assures me this sort of thing
>never goes on.. not ever...honest.
>Though he said the name was familiar...

it does go on, although it's an open question who does it.

Some time ago there were press reports of an Army intelligence person called Jones who claimed Diana and Hewitt had been photographed in a compromising position... he said he'd been doing this as part of an Army unit which had previously operated in Northern Ireland.

Then Hewitt said he'd been told the same thing by some Army people, and that they were threatening to release the tapes unless they curtailed their liaison... as per usual everyone denied everything, painted Jones as the "Jones twins" - not very original in how they deal with their perceived enemies, are they?

You have to wonder how they manage to achieve this sort of surveillance though. Audio you can understand, it's possible to put a microphone through the wall, and apparently there exist devices which will retrieve sound from a laser beam bounced off a window - sounds sci-fi, but there's a well known surveillance electronics company in London which sells these things.

But how would you get video out of a room, unless you had actual physical access in order to plant a device for pickup? We're not talking about looking in from afar, but an actual device within the room. You could either drill through the wall and shove a pickup through; or you could supply a trojan device with a hidden pickup inside; but most likely, you would have to physically break into your target room to plant a camera. That's not an infeasible option; all it means is having your target(s) watched to make sure they're not in the vicinity, then you negotiate any locks on the property and find a suitable receptacle for your device.

The next question is how they defeat the usual methods of counter-surveillance. We had private detectives carry out a "sweep" of every room and the telephone line. They found nothing. That indicates at least four possibilities that I can think of; (this is all guesswork BTW, and probably fanciful guesswork at that!)

1) no bugs (pull the other one)

2) radio-transmitting devices which can be controlled from an external source, ie you can instruct them to switch off when you detect a counter-surveillance sweep taking place

3) hard-wired devices; probe microphones or whatever they're called, things you poke through the wall

4) passive surveillance devices; so you bounce laser or radio waves off a suitable reflecting surface (again, sounds far-fetched but such things may apparently exist).

5) there is a fifth possibility, that the PI's didn't detect an actual transmitting device; there are technologies specifically designed to avoid detection, eg frequency hopping and suchlike. But how much sophistication could you build in to a device which would have to be small enough to be physically concealable?

I guess the real question is to find out who is ultimately behind these "goings on". And if the "great and good" (or the better known, at any rate) can't protect themselves, what hope is there for the rest of us?

> Believe me, they will find you.

Maybe I am doing something wrong, but I just looked through the FCC's
list of busts, fines
and other non fun things. Several hams got nailed, but it takes years
even for that, several
broadcasters for various and most often stupily silly offenses. But I
couldn't find a single
instance of anyone getting nailed for using GMRS or MURS without a
license.

Could you please provide cites of the "people who get busted all the
time"?
Thank you

Operating without a required license is illegal. Neglecting to pay a
parking meter is
also illegal. I don't see either as a moral or ethical quagmire. As
that famed child
actor said; "Don't do the crime if you can't do the time". Although to
be fair I suspect
it should be "Don't do the crime if you can't pay the fine". The FCC
sure looks like
a money raising operation.

Somehow I figure the chances of getting the FCC to even look into GMRS
or MURS
violations to be on the order of picking winning lottery numbers.

When I add in the fact that every enforcement action I have read about
has a cease
and desist warning before the fines begin.

For me it isn't a big deal. I value my ham license and wouldn't want to
place it
at risk. But here in the Lexington KY area I hear very little traffic
on GMRS and
I have enver heard any on MURS. I use my ham radios with hams, and FRS
for everyone else. Although one stormy night before my wife had her
license

we were towing a friends AirStream and ran into deep water. I had 2
IC-2ATs
with me and gave one to her and I lead the way. Illegal? Yes. Life and
property
safey issue? Yes! I decided to take the ever so slight risk of a pink
ticket
and save our friends home. Dumb? Yes as a rock. Had I checked the
weather
I would have picked another route. My wife was driving the truck, much
better
at it then me, but given the one lane road with no good place to turn
around,
we had to press on. Lossing my license was the least of my worries that
"Dark and Stormy Night". It did prompt my wife to get her license. And
somehow
I really doubt if I managed to hurt anyone, interferr with any comms as
I picked
an out of the way freq and we ran low power into smaller(then stock)
stubby duckies.

That is why I have 3 FRS with spare batteries in the car these days.

Terry

Legislatiion mandating institutionalization for hate speech is long over due in this country. And 90% of you shortwave newsgroupies best get your affairs i
He's in therapy for his use of an anti-gay slur against a castmate.

So some fairy got their feelings hurt? What a dumb ass reason to get stuck in counseling.
The complaining queer bastard needs a tuneup. And what is a "slur". Is it like not really saying a word.
The political correct crap has gone way to far. Besides,what ever happened to just kicking the shit out of fags.

I didn't go as far as that. This unit is made of a ferrite core and a
couple of very small value capacitors. I would guess the core was the
problem.

I've not only heard of Gorgeous George I have an anecdote about him.
When I was lad Georgeous George was in my little town to wrestle. My
next door neighbor, a beautician, received a call from GG or his
manager asking her if she would be interested in doing Georgeous' hair
in the ring just prior to his match. She declined. I never did learn
why she didn't want to do it but I'll bet she regretted it. It was a
missed opportunity to have some laughs and it would have given her a
great story to tell for the rest of her. I'd bet the pay was more than
fair to boot.

life. I bet the pay was pretty good to.

Rowdy Roddy Piper ranks right up there with the best. His "Piper's Pit"
was hysterical! I saw him a few years back trying to recapture the
glory days and it just didn't work, years of blows to his head finally
exacted their toll. It was really kind of sad.

tester, Tester. TESTER !

Another Clear Example of one more Liberal who believes that
Freedom-of-Speech does not apply to Conservative Talk Radio.

ABOUT - KSFO 560 kHz AM Talk Radio - San Francisco, CA
KSFO => http://www.ksfo560.com/home.asp
http://en.wikipedia.org/wiki/KSFO
http://en.wikipedia.org/wiki/KSFO_%28AM%29
http://en.wikipedia.org/wiki/KSFO_%28radio_station%29

Freedom-of-Speech
http://en.wikipedia.org/wiki/Freedom_of_speech
Freedom-of-Speech is the Concept of the Inherent Human Right
to Voice One's Opinion Publicly {enev on the Radio} Without Fear
of {Corporate} Censorship or {Government} Punishment.

Talk Radio
http://en.wikipedia.org/wiki/Talk_radio
In the United States {USA} - Talk Radio is dominated by
Consevative {Right-Thinking} Political Commentators and
the Top Five Talk Radio Programs are those of :
Rush Limbaugh, Sean Hannity, Michael Savage, Neal Boortz,
and Glenn Beck.

Conservatism in the United States {USA}
http://en.wikipedia.org/wiki/American_conservatism
Conservatism-in-the-United-States-of-America is a variety
of Political Ideologies within the United States under the
blanket heading of Conservative. Included are Fiscal
Conservatives, Free Marketeers {Economic Liberals}, Social
Conservatives, Bio-Conservatives {Environmentist} and
Religious Conservatives. In general Consevatives are
Supporters of a Strong and Powerful American Military
and are generally Opponents of Internationalism and the UN.
Consevative Thinking Advocates the Rights of Individuals over
the Government and States' Rights over Federal Control.

- It's ironic that a black man would be
- institutionalized for hate speech.

Smack-T,

Clearly a Rhetorical Impossibility :
"Black Man" -and- "Hate Speech"

Although many have been 'institutionalized' for Lesser Crimes
like : Homicide {Murder}, Sexual Assault {Rape}, Burglary
{Theft}, Pimping {White Slavery} and Narcotics {Drug Sales} . . .
-but- HATE SPEECH - Never !

Hate Speech = Hate Crime

David and Telamon,

Some of the better 300 Ohm to 75 Ohm TV type Matching
Transformers are labeled as being good down to 5 MHz.
Usually these are the {Gold Plated} ones designed for
Cable and Satellite TV used.

? Honestly ? What good does the Gold Plating do on the
"F" Connector and the Spade Connectors : When it is the
internal components that will determine the real quality of
the signal entering one end and exiting the other.

They work 'ok' for a basic Shortwave Listener (SWL)
Random Wire Antenna "Matcher" with moderate size
{Lenght} Antennas in the range of 20-60 Feet.

Plus they have the extra advantage of attenuating those
High Power AM/MW Radio Stations below 1.8 MHz.

at least this has been my experience - speaking
of "quick and dirty" - hey that's me - iane ~ RHF

MP,

Making The Simple Single Wire Antenna Element To Radio Connection
- - - That Was Easy !
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/12075

With a simple single Wire Antenna Element
Why use a PL-259 Plug to SO-239 Jack ?

You can simply use a Banana Plug 'plugged' into the
Center Connector of the SO-239 {50 Ohm} LO-Z Jack
at the back of the Radio.

-Or- Should your Radio have a set of Twin Termnals
{500 Ohm} HI-Z Connectors : Then simply attach the
end of the single Wire Antenna Element to the Antenna
Terminal and a Ground Wire to the Ground Terminal.

-Or- Should your Radio have a Whip Antenna : Then simply
attach the end of the single Wire Antenna Element to the
Tip of the Whip Antenna.

Which ever one of the above Antenna Wire 'Connections' that
gives you the best results for now -is- The Right Connection [.]
[To be able to simply Listen to your Radio.]

yes it is that simple : one wire at a time - iane ~ RHF {pomkia}

They've got an mp3 mix of some of the sh*t from KSFO at least until
the lawyers with the rat er um mouse ears show up.

Also go to news.google.com and search for ksfo blogger advertisers

Disney has been trying to get rid of its radio stations recently.
However, they also seem to be buying one of the stations which they
have been leasing, WQEW. (New York Times)

> Anyone ever use one of these? Is it worth $55 or so?

Looking at the manual,
<http://www.mfjenterprises.com/man/pdf/MFJ-1164.pdf>, it is a simple
LC fitler. 3 inductors, 2 caps and 2 MOVs. I am not a fan of MOVs as
they offer minimal OVP
protection and >WHEN< they fail they are very likely to catch on fire.

The four outlets are spaced far enough apart to allow, the never to be
dmaned enough, wall warts
to be used. And the case is heavy enough not to slip around.

If you are somewhat skilled, and willing to do the work yourself, you
can build your own RFI filter
that will be a lot more effective for a lot less money.

<http://www.hosfelt.com/ > offers serval RFI filters, I like the Curtis
F1600CA03. I don't need more
then 3A per outlet, so I use a fitler for each outlet. Curtis and
Corcom, and many other companies,
offer heavier (Higer current) RFI filters.

Unless you are using tube gear, or you are a ham with a "high" powered
transceiver, or have even
more radios then I do, I really doubt that you need a 25A fitler. The
lower power Curtis or Corcom
have a much higher effectiveness.

The Curtis filters are only $0.35 each.
A very good value.

One of my favorite "tricks" is to use spare PC style IEC power cables
and add a female AC mains
connector to the other end that matches the device, and I have placed
fitlers in line with >EVERY<
RF noise producing device in our home. Very inexpensive and very
effective. I doubt if I have more
then $30 in all of my RFI mains filters and I have spare Curtis for new
additons.

Good Morning,

I'm a beginning SWL who recently purchased a Kaito KA-2100 from
kaitousa.com.

I noticed that a lot of KA-2100 users love their radios (As do I),
but they have never mentioned a front-end selectivity problem
that I have encountered.

It seems that strong local AM stations "ghost" onto most of the
shortwave broadcasts.

Have any other KA-2100 users experienced this problem? Is there a fix?

Also, does anyone know if the upcoming 3000 suffers from this problem?

Thank you,

mod_merc

- - I didn't go as far as that.
- - This unit is made of a ferrite core and
- - a couple of very small value capacitors.
- - I would guess the core was the problem.
-
- I've reverse engineered a bunch of them.
- The ones with caps are very rare.

Offhand - I can only come up with two reasons to
put Capacitors in-side a Matching Transformer :
1 - To make it [Narrow] Band Specific {Tuned}
2 - To make it [Wide] Band Rejection {High -or- Low}

I would suspect that any TV type Matching Transformer
that had Capacitors in-side it would be designed to have
them act as part of a Low Band Rejection Filter for the
AM/MW {Shortwave} Band and 'pass' only the Higher

VHF and UHF TV Bands.

Jimmy Carter: Too many Jews on Holocaust council
Former president also rejected Christian historian because name sounded 'too Jewish'
Posted: January 25, 2007
11:07 p.m. Eastern

By Aaron Klein
© 2007 WorldNetDaily.com
Monroe Freedman

TEL AVIV - Former President Jimmy Carter once complained there were "too many Jews" on the government's Holocaust Memorial Council, Monroe Freedman, the council's former executive director, told WND in an exclusive interview.

Freedman, who served on the council during Carter's term as president, also revealed a noted Holocaust scholar who was a Presbyterian Christian was rejected from the council's board by Carter's office because the scholar's name "sounded too Jewish."

Freedman, now a professor of law at Hofstra University, was picked by the council's chairman, author Elie Weisel, to serve as executive director in 1980. The council, created by the Carter White House, went on to establish the Holocaust Memorial Museum in Washington, D.C.

Freedman says he was tasked with creating a board for the council and with making recommendations to the White House on how best to memorialize the Holocaust.

He told WND he sent a memo to Carter's office containing recommendations for council board members.

He said his memo was returned with a note on the upper right hand corner that stated, "Too many Jews."

The note, Freedman said, was written in Carter's handwriting and was initialed by Carter.
(Story continues below)

Freedman said at the time the board he constructed was about 80-perent Jewish, including many Holocaust survivors.

He said at the behest of the White House he composed another board consisting of more non-Jews. But he said he was "stunned" when Carter's office objected to a non-Jew whose name sounded Jewish.

Freedman said he could not provide the historians name to WND because he did not have the man's permission.

"I got a phone call from our liaison at the White House saying this particular historian whose name sounded Jewish would not do. The liaison said he would not even take the time to present Carter with the possibility of including the historian on the board because he knew Carter would think the name sounded too Jewish. I explained the historian is Presbyterian, but the liaison said it wouldn't matter to Carter."

Freedman said he was "outraged by this absurdity."

"If I was memorializing Martin Luther King, I would expect a significant number of board members to be African American. If I was memorializing Native American figures I'd expect a lot of Native Americans to be on the board.

"I do not for a moment consider it inappropriate to build a Holocaust council with a significant majority of the board being Jewish," Freedman stated.

Freedman describes himself as "self-proclaimed liberal." He said he decided to speak out after the release of Carter's latest book, "Palestine: Peace not Apartheid," which some have accused of being biased against Israel.

This would not be the first time Carter's messages on right hand corners of letters generated a Holocaust-related scandal.

Last week, in an interview with the Tovia Singer Show on Israel National Radio, a former U.S. Justice Department official said he received a letter advocating "special consideration" for a confessed Nazi SS officer accused of murdering Jews in the Mauthausen death camp in Austria.

Neal Sher, who served in the Justice Department's Office of Special Investigation, said that in 1987 he received a note from Carter petitioning for re-entry into the U.S. for Martin Bartesch, who had been deported by Sher's office to Austria after it was established he served as an SS officer.

Sher said his office had "extraordinary evidence" Bartesch shot Jews.

Bartesch originally immigrated to the U.S. and lived in Chicago. He later admitted to Sher's office and the court he had voluntarily joined the SS as a teenager and served in its Death's Head Division at the Mauthausen concentration camp where many thousands of prisoners were gassed, shot, starved and worked to death. Bartesch also confessed to having concealed his SS service at concentration camp from U.S. immigration officials.

Sher said the Justice Department obtained a journal kept by the SS and captured by the U.S. Armed Forces listing Bartesch as having shot to death Max Oschorn, a French Jewish prisoner.

Bartesch's daughters, who still lived in the U.S., attempted in 1987 to appeal to politicians to allow the former Nazi officer to enter the country. They wrote a note in which they claimed it was "un-American" to persecute a man for crimes committed when he was only 17 and 18 years old.

Sher said he was shocked when he received the daughter's letter replete with a handwritten note from Carter on the upper right corner stating the former president wanted "special consideration" for the Bartesch family for humanitarian reasons.

The note, containing Carter's signature, was obtained this week by the NY Sun.

Rep. Duncan Hunter Makes Presidential Bid Official

Republican Rep. Duncan Hunter, best known for his advocacy on behalf of the military, launched a longshot bid for the presidency Thursday in this early voting state.

Frequently citing Ronald Reagan, Hunter told supporters he wants to pick up on the former president's legacy.

"I want to lead that policy of peace through strength," said Hunter, a strong supporter of the Iraq war.

The 14-term conservative from California, who has made no secret of his White House aspirations, set up a presidential exploratory committee earlier this month.

He initially announced his intentions in October, becoming the first GOP candidate to declare, and then began making stops in early primary and caucus states, including Iowa, New Hampshire and South Carolina.

He joins an increasingly crowded GOP field of declared and likely candidates, including Sens. John McCain of Arizona and Sam Brownback of Kansas, former Massachusetts Gov. Mitt Romney, and former New York Mayor Rudy Giuliani.

Hunter has been a familiar face on Capitol Hill and at the Pentagon. Until Democrats took control of Congress this month, he was chairman of the House Armed Services Committee, the powerful panel that oversees military policy.

However, Hunter is little known outside of Congress and his San Diego district. He is a strong opponent of illegal immigration who wants fences extended along the U.S.-Mexico border and supports the prosecution of smugglers bringing illegal immigrants across the border.

Last week, Hunter filed a bill calling for a congressional pardon of two U.S. Border Patrol agents who are both serving more than a decade in prison for shooting a Mexican drug dealer as he fled, then covering up the crime.

In remarks before his speech, Hunter emphasized the importance of South Carolina in winning the GOP nomination.

"Nobody wins the presidency without winning South Carolina," Hunter said.

Hunter already has some deep-pocket allies in the state, including textile m agnate Roger Milliken, who supports Hunter's promise to protect U.S. manufacturers threatened by cheap, overseas labor.

"I'm thrilled that he's running," said Milliken, who hasn't yet endorsed a presidential candidate. "This point of view he represents must be heard."

Hunter, 58, was born in Riverside, Calif., and was an Army Ranger in Vietnam. He worked his way through law school with farming and construction jobs.

Hunter won his U.S. House seat in 1980 and has been an ardent military supporter. His son has spent a pair of seven-month tours in Iraq.

2200. Arab Groups Protest Glenn Beck's Hiring

Newsgroup: rec.radio.shortwave
Date: 2007-01-26 20:37:32 UTC
From: Guerite&#65533; <aim@their.heads>
Message-ID: <12rkpja1j5qm98b@corp.supernews.com>
Source record: 104299

The groups said that Beck -- who's drawing strong ratings with his evening show on CNN Headline News -- has stated on his show that Arab and Muslim Americans are apathetic to terrorism. During an interview in November with Minnesota Rep. Keith Ellison, the first Muslim member of Congress, Beck asked him to "prove to me that you are not working with our enemies."

"That blatant anti-Arab, anti-Muslim bias has been given credibility on a larger news show is something that concerns us," said Arab American Institute (AAI) spokeswoman Jennifer Kauffman.

[AAI co-founder, President, and leading spokesman James Zogby... is a major figure in Democratic Party affairs. He advised Jesse Jackson's 1984 presidential campaign and was close to President Clinton. http://www.discoverthenetwork.org/groupProfile.asp?grpid=6174]

Beck has said that his question to Ellison was poorly worded.

"My message is clear: Islam is a peaceful religion for over 90 percent of the world's Muslims," he said. "I have urged viewers repeatedly to understand this, while asking all of the proud, peaceful Muslims here in America to take a more visible role in our fight against those who make a mockery of the Quran. I also make airtime available, at any time, to any Muslim organization to help reinforce this realistic, peaceful view of Islam."

By Jeff Emanuel
January 24, 2007

The Politico's headline says it all: "Freshman Rep. Stephen I. Cohen, D-Tenn., is not joining the Congressional Black Caucus after several current and former members made it clear that a white lawmaker was not welcome."

Cohen isn't black. However, the Congressman he replaced - Harold "I like sports and I like girls" Ford - is, and his district, in Memphis, is 60% black, and his staff is majority African-American. That clearly just isn't good enough - even though, as a Democrat, Cohen likely has no intention whatsoever of rocking the CBC's boat; he appears simply to be trying to represent his constituency in the best way that he can.

The caucus does not have an "official" racial prerequisite for membership; however, no white Member has ever been able to join - even if an overwhelming percentage of their constituency is black.

It doesn't look like that's going to change any time soon, either. Rep. William Lacy Clay Sr. (D-Mo) responded to Cohen's attempt to join by authoring and circulating a memo which emphasized how "critical" it was "that the group remain exclusively African- American."

Clay's son, also a Democrat Congressman from Missouri, reinforced that opinion, saying: "It's an unwritten rule. It's understood. It's clear."

"Half my Democratic constituents were African-American. I felt we had interests in common as far as helping people in poverty," said Rep. Pete Stark (D-CA), who attempted to join the caucus in 1975. "They had a vote, and I lost. They said the issue was that I was white, and they felt it was important that the group be limited to African-Americans."

"I think they're real happy I'm not going to join," said Cohen, after finally backing out of his bid to do so. "It's their caucus and they do things their way. You don't force your way in. You need to be invited."

And the Congressional Black Caucus has made it very clear who is not invited, either now or ever: White people.

Way to work toward that "colorblind society," folks.

Tancredo: Abolish Race-Based Caucuses

Jan 25 3:28 PM US/Eastern

By LAURIE KELLMAN
Associated Press Writer

WASHINGTON (AP) -- White House hopeful Tom Tancredo said Thursday the existence of the Congressional Black Caucus and other race-based groups of lawmakers amount to segregation and should be abolished.
"It is utterly hypocritical for Congress to extol the virtues of a colorblind society while officially sanctioning caucuses that are based solely on race," said the Colorado Republican, who is most widely known as a vocal critic of illegal immigration.

"If we are serious about achieving the goal of a colorblind society, Congress should lead by example and end these divisive, race-based caucuses," said Tancredo, who is scheduled to pitch his long-shot presidential bid this weekend in New Hampshire.

Tancredo's request, relayed in a letter to Administration Committee Chairwoman Juanita Millender-McDonald, D-Calif., revived his effort to change House rules to abolish the groups. Besides the Congressional Black Caucus, Democrats also have a Hispanic caucus with 21 members, and Republicans have a comparable Hispanic conference with five full members and 11 "associate" members who are not Hispanic.

The request comes in the wake of reports that freshman Rep. Stephen Cohen, D-Tenn., was refused admission to the Congressional Black Caucus because he is white. All 43 members of the caucus are black.

Cohen said in a statement that he told a reporter that he would be honored to join the caucus but did not apply, "nor has the CBC denied membership to me."

However, the group would not have permitted Cohen to join, its new chairwoman told The Associated Press. Rep. Carolyn Cheeks Kilpatrick, D-Mich., said the caucus decided early on that official membership would be restricted to blacks.

Tancredo is chairman of the Congressional Immigration Reform Caucus, which seeks to toughen border security to stem illegal immigration. He also opposes guest worker programs and immigration proposals by President Bush.

Fox News asks the question: "Does any terrorist organization pose a greater threat to Americans than Al Qaeda?" According to Fox:

"Hezbollah has been focused on U.S. interests for quite some time. In fact, Hezbollah operatives have been quietly setting up operations in the U.S. for years.

One of those operations is the subject of "Smokescreen: Hezbollah Inside America," http://www.foxnews.com/story/0,2933,244002,00.html
an exhaustive FOX News report about a Hezbollah cell that was operating for several years in Charlotte, North Carolina. FOX followed the many tentacles of this cell, which extended far beyond Charlotte - to Michigan, to the West Coast, to Canada and to Beirut, Lebanon, where most of the members were from."

Sad to hear that. Bob has a right to be irrigated at all our kvetching.
I was one of them. but I went back to version three and I am happy as a
hog in slop and I said that on the list

Too many of us aren't GEEKS and have no patience with a computer's
innate idiosyncrasies (and I admit user-setup errors)and I think Bob
shouldnt feel overwhelmed at being unable to get into each of our heads
trying to solve problems

I think my problem is centered around certain MSC services not being IN
my computer making me unable to use some of the advanced software needed
to make version 5 work

I gave up and I guess Bob did too. I have been seeking a job for 3
months and I am over stressed. Bob had undergone a professional dry

spell that was satisfactorily resolved as well. I got a job. Maybe we ALL need a break. . Perhaps that is a start over

The gold plating on the contacts is so there is no corrosion or
oxidation on the connector mating surface. If you don't have a good DC
connection you don't have a good circuit for RF either. Gold is a nobel
metal that does not oxidize.

Yeah they will do that. Problem is they will not work so well on 41, 49,
60, 75, 90, and 120 either.

www.gulflink.osd.mil/dodig/log.htm

Just so happens I happen to own a big tall CompuAdd 433 computer.(and about fifteen other old computers too) It measures about twenty six inches from top to bottom.I bought it for a few dollars at the Goodwill store about three years ago.I doubt if there is anything pertinent in the hard drive though.I only bought it because I like big long tallllll computers.When I cleaned out a bunch of junk in my vans in my back yard before I sold those old vans,the computer sat on the ground in my back yard for about a week and got rained on a couple of times.

Hes a longgggg tallllll Texannn,,,,,, he wears a ten gallon hattttt,,,,,, Arrrahhh,,, Arrrrrrhhhhh,is that my hoss?????

>
- Offhand - I can only come up with two reasons to
- put Capacitors in-side a Matching Transformer :
- 1 - To make it [Narrow] Band Specific {Tuned}
- 2 - To make it [Wide] Band Rejection {High -or- Low}

Example - Shortwave Baluns and Accessories
http://www.kintronic.com/site/subassemblies/baluns.asp
Kintronic Laboratories offers two types of Shortwave Baluns.
First is a discrete Discrete Component Shortwave Balun
with Tunable Capacitors to permit a 1:1 Match at any

Frequency in a Single Shortwave (HF) Band of operation.

Chad,

Question - Rigging the Shortwave Listener (SWL) Antenna
On-or-Under 'The Roof' - When Par may be the Answer !
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/12080

IMHO - Better a simple Horizontal [Flat] Loop Antenna
that is Rigged around the perimeter of 'The Roof' :
* More Wire-in-the-Air
* Larger signal capture area
* Lower Noise
* More Omni-Directional signal pick-up

Consider putting your Shortwave Listening (SWL) Antenna
Up-There On-the-Roof for Everyone-to-See
READ - The Shortwave Listener's (SWL) "Random" Horizontal [Flat] Loop
Antenna
http://groups.google.com/group/rec.radio.shortwave/msg/c173213a11be0b83

Consider putting your Shortwave Listening (SWL) Antenna
Under-the-Roof {In-the-Attic} and Out-of-Sight !
READ - The In-the-Attic Horizontal [Flat] Loop Antenna
http://groups.google.com/group/rec.radio.shortwave/msg/01f4e10e7df8249c

Just may be the better choice to fill the available space.

One-More-Option might be . . .

Now why you being like that? Have a bad day or what? Guess I better not mention the KKK deputy sheriff who got arrested for killing two young blacks back in 1964 down in Mississippi yesterday.

I made one of these antennas about a year ago, and while it worked, the
50 foot random wire I have up now works much better.

> shortwave broadcasts.

You must have *very* strong AM stations there. Are you using an external (as in longish outdoor) antenna by any chance? That's a good way to overload such a portable. Here in ol' Europe it's mainly 2nd order intermod on shortwave that are problematic even on the whip... the maximum RF gain on the RP2000/2100 is quite high and the 1st mixer is a normal dual balanced one as used in many other portables.

> Have any other KA-2100 users experienced this problem? Is there a fix?

If you are using an external antenna, you could run it through an AMBCB blocking filter (I forgot what exactly they're called). Otherwise I would suggest using a selective antenna, like a tunable shortwave loop (a DIY one like this: <http://www.kr1st.com/swlloop.htm> will be cheaper; you're likely to need a F-to-PAL adapter given that PAL connectors appear to be uncommon in the US).

> Also, does anyone know if the upcoming 3000 suffers from this problem?

Since noone but the developers has had one to play with so far, that's hard to tell.

Hello all,

I have become a new member to post this request - I own a shortwave radio but it's not a very good one and I don't use it so much...

I want to get hold of a recording of a\ female Russian voice - I have one but there is so much interference and background noise. It's for a silly song that I am writing.

So, if anyone can provide me with a moderately clean recording (doesn't have to be too great) it would be just great.

Thanks all!

zero zero zero zero

I see a few people have not left. KK7HO comes to mind. He used to post on this newsgroup for years. K5BLB is another noteworthy person that I thought had been long dead. Since I do alot of my internet posts at Nim Busters now, I don't know too much about the other folks on there. Tonite, I am going to tune into the "GREAT LIBERTY NET" once again, for the first time in many years. Of course now, I will need to turn off all the computer stuff, because the CPU and Cable modem fry SW reception here. I also have the latest WWRB frequencies for Brother Stair in my radio as well.

Well, I am gonna save up my pennies and get me a Radio Shack 10 meter radio. And when I have everything set up, I am gonna have some fun. I am thinking about having a "NimBuster QSO party" All Nimbuster who are hams, and I know there are some, can join me as I get on HF for the first time!

More to come on my OTDF "Bee-log"
http://otdf.blogspot.com/

Dont forget to check out the Nimbusters board too!
And help my buddy Steve Holsten too!

"Hispanics accounted for 71 percent of the growth in the U.S. Catholic
Church from 1960 to 1999."

The next question you should ask is who accounted for the growth of Islam in
the U.S.A and by how much?

Although I abhor illegal aliens the Catholic Church may perhaps be the last
salvation of the U.S.A.
What should be required is that English be the official language of the
U.S.A. and all elementary students be taught only in the English language.

I'll take an illegal Christian alien over any kind of Islamic fascist any
day.

Read "Red Star Over Hollywood" - The Film Colony's Long Romance with Red
Left,
which details the behind-the-scenes radicalism of many members of the
Communist Party in Hollywood.

[cut-N-paste audio link]
http://archive.wgnradio.com:8080/ramgen/wgnam/shows/ex720/Audio/redhollywood
050526mr.rm

Early in 2003, the Left, with their useful idiot supporters in Hollywood and
anti-American (i.e. anti-capitalist) forces around the world, committed
themselves to protecting the neo-Nazi dictator of Iraq, Saddam Hussein. This
tyrant, who recently engineered his "reelection" with 99% of the vote, has
conducted a terror regime for more than twenty years, with constant
torture, the use poison gas against Kurds and others, invasions of Iran and
Kuwait, and defiance for 12 years against international sanctions requiring
him to account for and destroy the stocks of chemical and biological agents
that he admitted to possessing. This person was then elevated by the Left
into the leader of the heroic struggle of the Iraqi people against America.
Thus, one of the most violent and vicious rulers in the world, whose son
reportedly regularly kidnaps, rapes, and murders women, becomes the
"progressive" poster child for "peace." The most cutting retort to this
seems to be that the United States supported Saddam Hussein against Iran.
Well, the United States supported Josef Stalin against Hitler, and I don't
hear any complaints about that, even though Stalin ended up murdering more
people, and certainly enslaving more for longer, than Hitler did. But then
Stalin was a good guy to these people, and we were bad for later opposing
him....

The "peace" movement, therefore, like the "peace" movement in the Vietnam era, is not really for peace, it is for the defeat of America, by Communists if possible, but by anyone (like Hussein) if necessary. If Saddam Hussein has biological, chemical, or nuclear weapons, and if these can be put into the hands of terrorists, to kill thousands (more) or millions of Americans (and Jews), that is the consummation devoutly to be desired. The fools, who didn't mind when Impeached Clinton overthrew the government of Haiti or bombed the hell out of Serbia, now naively marched with people whose fondest hope was that Saddam Hussein would survive and be able to kill us.

The United States, however, overthrew Hussein and occupied Iraq in three weeks. A country that has never had a liberal society or a democratic government, and is vulnerable to the attractions of Islamic Fascism, is a poor candidate for "nation building." The American experience in Iraq therefore may very well turn out no better than it was in Lebanon in the 80's or Somalia in the 90's; but any day such a dictator can be overthrown is a good day for humanity. This is what the Left can never admit, if such an event is ever of any benefit to the United States itself....

http://www.friesian.com/rand.htm#essential and scroll down.

Also read - The Black Book of Communism, published in 1997.

Fran&#65533;ois Furet, author and former Communist, argues that Stalin was able to mask the terror of the Soviet state, and indeed to widen its appeal to many in the West, by assuming the mantle of anti fascism.

For decades, the legions of Stalin's followers were able to depict themselves as fellow partisans in the good fight. Moreover, they were also able to deflect attention from the crimes committed by Stalin and his henchmen, especially since anyone who told the truth about what was taking place in the USSR was immediately branded a Fascist. Thus we had the strange spectacle of the French left erupting in anger after publication of Courtois ' book, which they claimed (in a throwback to the days of the Popular Front) was a new apologia for fascism. Even today, it seems, critics of communism face stern resistance in the West.

Many liberals are reluctant to attack Communists unreservedly out of a fear that doing so would "play into the hands of the right." Anticommunism, in this view, is but a variant of antiliberalism, and it tends, moreover, to legitimate reactionary regimes and movements. To many well-meaning Western liberals, therefore, it is more important to ignore or minimize the crimes of communism-they are in the past, after all-than to do anything that would aid the primary enemy on the right. In the extreme version of this position, as Malia notes, "a moral man can have 'no enemies to the left.'" From this perspective, it matters not that Communists and Fascists committed comparable crimes; what counts is that their "moral auras were antithetical." Malia responds to this view by citing the argument of East European dissidents that "mass murder in the name of a noble idea is more perverse than it is in the name of a base one."

http://www.firstthings.com/ftissues/ft0002/reviews/radosh.html

Already famous throughout Europe, this international bestseller plumbs recently opened archives in the former Soviet bloc to reveal the actual, practical accomplishments of Communism around the world: terror, torture, famine, mass deportations, and massacres. Astonishing in the sheer detail it amasses, the book is the first comprehensive attempt to catalogue and analyze the crimes of Communism over seventy years.

"Revolutions, like trees, must be judged by their fruit," Ignazio Silone wrote, and this is the standard the authors apply to the Communist experience--in the China of "the Great Helmsman," Kim Il Sung's Korea, Vietnam under "Uncle Ho" and Cuba under Castro, Ethiopia under Mengistu, Angola under Neto, and Afghanistan under Najibullah. The authors, all distinguished scholars based in Europe, document Communist crimes against humanity, but also crimes against national and universal culture, from Stalin's destruction of hundreds of churches in Moscow to Ceausescu's leveling of the historic heart of Bucharest to the widescale devastation visited on Chinese culture by Mao's Red Guards.

As the death toll mounts--as many as 25 million in the former Soviet Union, 65 million in China, 1.7 million in Cambodia, and on and on--the authors systematically show how and why, wherever the millenarian ideology of Communism was established, it quickly led to crime, terror, and repression. An extraordinary accounting, this book amply documents the unparalleled position and significance of Communism in the hierarchy of violence that is the history of the twentieth century.

They are both none resonant antennas and the 50 foot random wire has a
larger capture area so that would be the expected result.

Some of his views are OK but some are not. I liked his radio broadcasts
some times but the TV show sucked. Lame set, format and guests on a big
screen monitor sucks like everything else on CNN. Boring, boring, boring.

< Snip >

That would depend on the application like anything engineered. In
general the current type would be best for Hertzian antennas and I would
only use the voltage type on random/long wire Marconi type antennas.

" White House hopefulTomTancredosaid Thursday the existence
of the Congressional Black Caucus and other race-based groups
of lawmakers amount to segregation and should be abolished."

Unbelievable. Someone in Congress who actually has a degree of common
sense. It should not be obvious in this nation that one group cannot
demand dictinction and expect special privilege without discrimination
againt others.

Some may recall when MLK spoke on a color-blind society. Do you
suppose that the current round of race baiters and those promoting
identity politics are what Dr. King was promoting.

Telamon,

Shortwave Antennas : Size-and-Location - Two Factors that
contribute to better Shortwave Listening (SWL)
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/12085

As you have correctly pointed-out while they both may have
the same 50 Feet Length-of-Wire used to make them.
* The BroomStick is only 5-8 Feet Tall {Long}
- = Verses= -
The 50 Foot Random Wire Antenna is in-fact 50-Foot L O N G !

Plus the fact that most BroomStick Antennas are located
in-side the House {Radio Shack room}
- = Vice = -
Most 50 Foot Random Wire Antennas are located out-side
the House :
1 - One with-in the Man-made-Noise Zone {BroomStick}
2 - One beyond the Man-made-Noise Zone {50-Foot Wire}
So "Location" - Also plays it's part in making the
Out-Side 50 Foot Random Wire Antenna the better Antenna
for Shortwave Listening SWL).

that's the way that i see it - in-my-minds-eye - iane ~ RHF {pomkia}

-
- They are both none resonant antennas and the 50 foot random wire
- has a larger capture area so that would be the expected result.

> Way to work toward that "colorblind society," folks.

You have to shake your head when learning that there are those who continue believe that "Diversity" and the 'celebration of differences' is the way to promote equality and a color-blind society. Instead of recognizing that the promotion of group identity is a political construct used specifically for political gain.

Civil rights became a cliché when it went from a moral cause to a political one. We should have nothing but contempt for those who pushed for - and continue to promote - civil rights solely for political gain.

56 minutes ago

WASHINGTON - From high-dollar fraud to conspiracy to bribery and bid rigging, Army investigators have opened up to 50 criminal probes involving battlefield contractors in the war in Iraq and the U.S. fight against terrorism, The Associated Press has learned.

ADVERTISEMENT

Senior contracting officials, government employees, residents of other countries and, in some cases, U.S. military personnel have been implicated in millions of dollars of fraud allegations.

"All of these involve operations in Iraq, Afghanistan and Kuwait," Chris Grey, a spokesman for the U.S. Army Criminal Investigation Command, confirmed Saturday to the AP.

"CID agents will pursue leads and the truth wherever it may take us," Grey said. "We take this very seriously."

Battlefield contractors have been implicated in allegations of fraud and abuse since the war in Iraq began in spring 2003. A special inspector general office that focused solely on reconstruction spending in Iraq developed cases that led to four criminal convictions.

The problems stem in part from the Pentagon's struggle to get a handle on the unprecedented number of contractors now helping run the nation's wars. Contractors are used in battle zones to do nearly everything but fight. They run cafeterias and laundries for troops, move supplies, run communication systems and repair weapons systems.

Special agents from the Army's major procurement fraud unit recently were dispatched to Iraq, Afghanistan and Kuwait, where they are "working closely and sharing information with other law enforcement agencies in the region," Grey said.

"Given the billions of dollars in contract dollars that have been and are being spent, it is our experience that our agents will detect millions of dollars in fraud before we are done," Grey said. "And just as likely, we will be instrumental in bringing back to the U.S. government millions of dollars in recoveries."

One case involves an Army chief warrant officer accused of taking a $50,000 bribe to steer a contract for paper products and plastic

flatware away from a government contractor and to a Kuwaiti company, according to an indictment unsealed Thursday in federal court at Rock Island, Ill.

Prosecutors say the officer took the bribe while at Camp Arifjan in Kuwait, while he was the Army's food service adviser for Iraq, Afghanistan and Kuwait, according to the indictment. The officer is also accused of trying to smuggle $40,000 in undeclared cash into the United States on a December 2005 flight from Kuwait to Dover, Del.

Other cases involve a government officer manipulating a contract in exchange for large bridges, a contractor making false claims against the government and an official accepting gratuities. The cases range in type, seriousness and complexity and involve contractors both inside and outside the United States.

The Pentagon has viewed outsourcing a wide variety of military tasks as much more efficient, leaving troops trained in combat to the business of war.

But the Government Accountability Office reported in December that the military has been losing millions of dollars because it cannot monitor industry workers in far-flung locations.

The Defense Department's inability to manage contractors effectively has hurt military operations and unit morale and cost the Pentagon money, the GAO said.

Some 60,000 contractors have been supporting the Army in Southwest Asia, which includes Iraq. That compares with 9,200 contractors in the 1991 Persian Gulf War.

Commanders are often unsure how many contractors use their bases and require food, housing and protection, according to the report. One Army official said the service estimates losing about $43 million each year on free meals provided to contractors who also get a food allowance.

The new Democratic Congress plans to ramp up oversight of the billions of dollars being spent in Iraq, including dollars awarded to contractors. Rep. Ike Skelton (news, bio, voting record), D-Mo., chairman of the House Armed Services Committee, has said he plans to target contractor abuse.

Las Vegas police search for priest in assault on woman working at church
By Associated Press
Saturday, January 27, 2007 - Updated: 02:45 PM EST

LAS VEGAS - Police were searching for a Catholic priest they believe may have sexually assaulted and struck a woman at a church.

Authorities said they were called to Our Lady of Las Vegas Catholic Church on Friday evening by someone who heard a woman in the church cry for help.

Officers found a church employee who said she had been assaulted and hit in the head with an object by a priest. Investigators consider the Rev. George Chaanine a person of interest, police spokesman Bill Cassell said.

Police closed the grounds of the church, which is about four miles west of the Las Vegas Strip, for about an hour while they searched for Chaanine.

They believe the priest is driving a cream-colored Buick LeSabre.

The victim was treated at University Medical Center and released.

Priest in Las Vegas sought after assault
Jan. 27, 2007 at 7:00PM
A woman who works for a Roman Catholic church in Las Vegas says a priest there beat her, police say.
The assault allegedly took place in a building at Our Lady of Las Vegas on Friday afternoon, the Las Vegas Review-Journal reported.
Police were searching for the Rev. Georges Chaanine and said he might be armed.
"A woman had run outside of the church establishment here and claimed that she had been beaten," Police Capt. Gary Schofield said.
Police released few details about the alleged assault, although Schofield described the scene as "disturbing." When pressed on his words, Schofield said that finding any victim is disturbing, the report said.

I use both A Kantronics KAM XL and a Signalink SL-1+

I use Pacterm with the Kam XL but I use mostly WinPSK and Digipan and MIXW with the soundcard interface.

The only thing the soundcard interface has an advantage over the Kam is in PSK31 and MT63 transmit and recieve.

The Kam XL copies and sends Pactor in both modes and generally does a lot better job in copying RTTY,AMTOR and VHF and HF Packet. and has many more options such as being a DSP unit.

I used the K4ABT Rascal Interface for a while but its cheap and crappy as far as transmit goes but ok for just listening.

I also own the AEA DSP 232 and the AEA PK900 and they are almost as good as the Kam XL but the soundcard interface still has the same advantages over them.

Hi there Kurt

Thanks for that. A friend of mine has a copy of the Conet Project CDs - I had a listen and their are two Russian female voices, but the background noise is too great on those too. There's nothing suitable on the spook site either. No, I was hoping that somebody may have made a recording themselves that I might get a copy of (that way avoiding copyright problems reproducing recordings of stations that don't officially exist...)

Thanks again

Graeme

PS Who did it before that you know of? I expect it has been the subject of a few songs. I know there have been a couple of bands called 'Numbers Stations' over the years too.

This is good news, not that the scumbag recovered, good news that the asshole is sick. It is a shame he didn't die. The sawed off runt represents the worst of the worst - a huckster preying upon people's baser qualities and frustrations to make millions of dollars and spread hate. All in the name of Jesus of course.

I've heard his radio hustle rakes in millions from the faithful "tithes and offerings." Does anyone know what his net worth is? He owns prime real estate in one of the most expensive parts of Colorado, top of the line vehicles and ranching equipment, hired hands, radio equipment and staff, 24/7 radio air time.

So Mr.& Mrs. Idiot are providing a very lucrative lifestyle for the Right Reverend Dick Dick. Especially considering his work ethic is questionable at best, spending more time on personal pursuits than his "ministry". He has so many years of tapes and writings accumulated the sheep don't really know the difference.

Anyway, thank you for posting the news. Let us watch and hope he takes a turn for the worse. At his age you don't just bounce back from serious illness so this could mark the first in a serious of health problems for him. A slow and agonizing death?

I bought a Timewave PK-232 w/DSP TNC some years ago and just recently placed it into operation. I have tried the PKTERM '99 program and I can't say that I really liked it very much. I have tried to de-code morse via the TNC and it seems like the very best that I can do is de-code at about a rate of 75%. I am not impressed. I used MT63 to decode transmissions via a soundcard and that worked very well. So what good is my TNC when so many programs are now free and found on the internet and all that is needed is a cheap computer with a soundcard?

NOW YOU TELL ME! I tuned in and all I caught was Mike Hammer staring down the barrel of a shotgun and then walking away - cripes! Would have liked to seen the movie, I really like black and white and the elongated screen. Did you know the elongated screen actually shows more footage than if the whole screen was full? Sounds odd but it's true - I saw them demonstrate it once.

2302. Country Radio Grapples With Shifting Demographics

Wow talk about a GREAT news day! First I learn Pete Peters is near death and now country music is to! Pinch me I must be dreaming this is simply too good to be true!!

By Ken Tucker
Sat Jan 27, 6:17 AM ET

NASHVILLE (Billboard) - When Los Angeles country music station KZLA changed format last August, alarms sounded in the country music radio and record communities.

The nation's No. 2 market joined New York, which has lacked a country station since 2002, and San Francisco, which bowed out of the country game in early 2005, as the third among the top five markets with no FM country outlet. (Two Los Angeles-area AM stations recently switched to country.)

Among the reasons for the KZLA switch: It's increasingly difficult to succeed with country radio in a market where Caucasians carry less and less sway. A 2006 Arbitron report estimated that only 5.4% of country radio's nationwide audience is Hispanic and 2.3% is black, while 92.3% of country listeners fall into Arbitron's "other" category (which includes Caucasians and Pacific Islanders). But in recent years, U.S. Census figures show, the Hispanic portion of Los Angeles County's population (which grew to 44.6% in 2000 from 37.8% in 1990) has passed up the county's non-Hispanic white population (which slipped to 31.1% of the total in 2000 from 40.8% in 1990).

At the annual Country Radio Seminar, to be held February 28-March 2 in Nashville, Edison Media Research and industry trade group Country Radio Broadcasters will present results of a collaborative study of the relationship of Hispanics with country radio and music. And meanwhile, with demographics shifting across the United States, country radio will have to adapt if it hopes to maintain its role as radio's top format. (As of December 2006 there were 2,047 country stations in the United States, according to M Street Journal. News/ talk was second with 2,007 stations.)

While most country stations continue to focus on their declining core, at least one has been more aggressive when it comes to attracting Hispanic and African-American listeners. Since the former comprise 46% of the 12-plus demographic and the latter another 20%, Miami might appear to be a bad place for a country station. But WKIS (Kiss Country) has aired the format for more than 25 years.

Historically, Arbitron has tended to rank the station No. 1 or No. 2 in the market among non-black/non-Hispanic 25- to 54-year-olds, according to program director Bob Barnett. But the market's ethnic composition, Barnett says, weighs heavily on decisions made at WKIS. "With zero exaggeration, it's a factor that impacts everything we do in programming, promotions, marketing and sales," he says.

A dwindling white audience makes attracting new listeners a necessity. "With the ongoing white exodus from South Florida--a near 20% decline in whites since the 2000 census was implemented--the challenge before us is to replace relocating white listeners with Hispanic/Latin listeners," Barnett says.

It's not easy to do. "There appears to be a very vocal bias (and/or) prejudice that exists in South Florida among whites who feel that the Hispanics have 'pushed' their culture and language on everyone else," Barnett explains. That bias makes it difficult to reach Hispanics using the WKIS airwaves, he says. "For example, we can't even do bilingual IDs without significant listener backlash."

The station's marketing efforts are "stealth or street-level, so as not to anger the loyal core users," Barnett says.

He is also reaching out to the Hispanic audience through music. "We're attempting to make the music mix more Hispanic-friendly without disenfranchising the core," he says. "It becomes a very delicate balancing act.

"The Hispanic listeners have little to no history in the format, so older songs aren't as popular with Hispanics," he explains. Likewise, he says, traditional-sounding country is less popular with Hispanic listeners than the pop leanings of Shania Twain and
Faith Hill.

The good news, according to Barnett, is that Cuban-Americans and many South American Latins who have relocated to South Florida have a profile similar to country listeners. "They're very family-oriented, hardworking, spiritual and patriotic. The themes in country music aren't foreign to them.

"Now that we're getting into the second and third generations of Latins, it appears that the assimilation into American culture is slowly taking place -- as is their interest level in country music."

And what of Nashville's historically lily-white record labels? Might they add non-white artists to diversify their rosters? "That just isn't the way it works," Warner Bros. Nashville chief Bill Bennett says. "If you find someone with real quality music, you don't care what ethnic background they're from."

Bennett adds, "We have Cowboy Troy and Rick Trevino, but not because they're ethnic. We have them because they make great songs."

Barnett, not surprisingly, sees things differently. "I think the degree of difficulty in marketing a black or Hispanic or Latin artist to country radio may initially be too unfamiliar and too overwhelming for most on Music Row," he says. "The labels are more likely to choose the path of least resistance, but there may be an opportunity for a renegade independent label to take that risk. The potential payoff could be huge, but obviously not without great challenge."

2303. Clear Channel and Public Service - We don't need no stinking local DJs

Is Clear Channel qualified to run all six non-religious commercial
stations in Minot, SD? Is any single company?

http://www.nytimes.com/2007/01/28/magazine/28WWLN_IdeaLab.t.html

In the early morning of Jan. 18, 2002, a Canadian Pacific Railway
train carrying hazardous chemicals derailed just outside Minot, N.D.,
spilling roughly 240,000 gallons of anhydrous ammonia into a woodsy
neighborhood on the outskirts of town. The resulting toxic cloud grew
to some five miles long, two and a half miles wide and 350 feet high,
enveloping the homes of approximately 15,000 people. Confused and
afraid, thousands of Minot residents turned on their radios to get
public warnings and instructions on how to stay safe.

Yet no such information was available. Minotï¿½s six nonreligious
commercial stations, all of which were owned and operated by the
nationï¿½s largest radio company, Clear Channel Communications, were
broadcasting prerecorded programs engineered in remote studios. Police
dispatchers couldnï¿½t reach anyone in Clear Channelï¿½s local offices:
the townï¿½s new emergency-communications system failed to automatically
issue an alert, and no one answered the phones at the stations. What
ensued was horrific: as one man died and hundreds became ill from
inhaling the poisonous gas, the airwaves were filled with canned music
and smooth-talking D.J.ï¿½s.

I'm only using the attached whip antenna, I was contemplating using an external but was unsure if I would have the same problem. Since you have mentioned a possible overload scenario, I will hold off on that option.

As for the AM station, there are powerful local broadcasts.

Revealed: How eBay sellers fix auctions

http://www.timesonline.co.uk/newspaper/0,,176-2570050,00.html

Recorded excerpts of meetings with Paraskevaides

CUSTOMERS of the internet auction site eBay are being defrauded by unscrupulous dealers who secretly bid up the price of items on sale to boost profits. An investigation by The Sunday Times has indicated that the practice of artificially driving up prices - known as shill bidding - is widespread across the site.

Last week one of the UK's biggest eBay sellers admitted in a taped conversation with an undercover reporter that he was prepared to use business associates to bid on his goods for him. Our inquiries found evidence that a number of businesses - ranging from overseas property agencies to car dealerships - have placed bids on their own items using fake identities. The cases raise questions about whether eBay, the world's biggest auction site, is doing enough to protect consumers.

Shill bidding is against eBay rules and is illegal under the 2006 Fraud Act. However, the resulting higher prices on the site boost the value of eBay's share of the sales.

Last November eBay changed its rules to conceal bidders' identity - making it even more difficult for customers to see whether sellers are bidding on their own lots. Since its launch seven years ago, eBay's UK website has attracted more than 15m customers. It sells more than 10m items at any given time. One of the beneficiaries of the boom is Eftis Paraskevaides, a former gynaecologist, from Cambridgeshire. He has become a "Titanium PowerSeller" - one of eBay's handful of top earners - selling more than £1.4m worth of antiquities a year on the site.

In a conversation with an undercover reporter last week, Paraskevaides claimed shill bidding was commonplace on eBay. When the reporter asked whether he arranged for associates to bid on his own items, he replied: "Well, if I put something really expensive (up for sale) and I was concerned that it was going for nothing, I would phone a friend of mine, even a client of mine who buys from me, and say: For Christ's sake, I sell you 100 quids' worth of items a week . . . just put two grand on it, will you?" The reporter was posing as a seller of valuable antiquities. He inquired whether Paraskevaides could sell them on eBay and guarantee a minimum price. He replied: "Leave it to me (laughs). Don't call it shill bidding. Then I won't be accused of

shill bidding. Yes. I mean - I've got people. "I've got some of my big clients who buy big items off me, I look after them. So I can get on the phone to America and say: Mr XXXX . . . you're a multi-millionaire. You buy a hundred grand's worth off me a year. Do me a favour would you. Just put - yeah. Exactly." He claimed eBay would never follow up a complaint against him for shill bidding because he generated about £15,000 a month in commission for the company. "Are they going to ban somebody who's making them the best part of 15 grand a month? No," he said.

After being told that he had been talking to an undercover reporter, Paraskevaides denied that he had ever shill bidded on eBay and claimed he was talking about clients who sometimes bid on expensive items if they wished to protect the price. However The Sunday Times discovered businesses that have been bidding on their own items. One leading dealer from London admitted last week that that he had shill bidded in the past.

A spokesman for eBay said he expected that the company would now launch an investigation into Paraskevaides. Anyone caught shill bidding risks a permanent ban. The spokesman added: "The change to the way bidder IDs are shown has already resulted in a safer environment for users."

---- END / CUT ----

(Gee folks...sounds alot like e-Bayers who sell radios sittin on coloured fabric eh??? GRIN)

That's the problem. "Some years ago", the TNC -was- the way to go. Not so today.

> I have tried to de-code morse via the TNC and it seems like the very
> best that I can do is de-code at about a rate of 75%.

This is typical of -any- type of non-human Morse decoder (even a sound card). These devices are susceptible to QRM, QRN, character spacing, how good the sender's "fist" is, etc, things that the human brain decoder can compensate for.

> So what good is my TNC when so many programs are now free and found
> on the internet and all that is needed is a cheap computer with a
> soundcard?

Well, you've essentially answered your own question. Except for the "TOR" modes (AMTOR, PACTOR, G-TOR), a sound card and software is the better way to go (and sound cards will also do SSTV, Hellschreiber and many other modes, both new and old).

While it's easy to condemn shill bidding, and it's technically illegal, hopefully we all realize that it's a common practice in both live and online auctions. If you go to an auction house where high-end items are being sold (jewelry, antiques, etc.) do you not think that the seller and/or auctioneer have people in the audience bidding up the price?

"Bignose Bernie the Bagelman" <auntkrebes4@yahoo.com> wrote in message news:1169989750.071762.97670@p10g2000cwp.googlegroups.com...
Revealed: How eBay sellers fix auctions

http://www.timesonline.co.uk/newspaper/0,,176-2570050,00.html

Recorded excerpts of meetings with Paraskevaides

CUSTOMERS of the internet auction site eBay are being defrauded by unscrupulous dealers who secretly bid up the price of items on sale to boost profits. An investigation by The Sunday Times has indicated that the practice of artificially driving up prices - known as shill bidding - is widespread across the site.

Last week one of the UK's biggest eBay sellers admitted in a taped conversation with an undercover reporter that he was prepared to use business associates to bid on his goods for him. Our inquiries found evidence that a number of businesses - ranging from overseas property agencies to car dealerships - have placed bids on their own items using fake identities. The cases raise questions about whether eBay, the world's biggest auction site, is doing enough to protect consumers.

Shill bidding is against eBay rules and is illegal under the 2006 Fraud Act. However, the resulting higher prices on the site boost the value of eBay's share of the sales.

Last November eBay changed its rules to conceal bidders' identity - making it even more difficult for customers to see whether sellers are bidding on their own lots. Since its launch seven years ago, eBay's UK website has attracted more than 15m customers. It sells more than 10m items at any given time. One of the beneficiaries of the boom is Eftis Paraskevaides, a former gynaecologist, from Cambridgeshire. He has become a "Titanium PowerSeller" - one of eBay's handful of top earners - selling more than £1.4m worth of antiquities a year on the site.

In a conversation with an undercover reporter last week, Paraskevaides claimed shill bidding was commonplace on eBay. When the reporter asked whether he arranged for associates to bid on his own items, he

replied: "Well, if I put something really expensive (up for sale) and I was concerned that it was going for nothing, I would phone a friend of mine, even a client of mine who buys from me, and say: For Christ's sake, I sell you 100 quids' worth of items a week . . . just put two grand on it, will you?" The reporter was posing as a seller of valuable antiquities. He inquired whether Paraskevaides could sell them on eBay and guarantee a minimum price. He replied: "Leave it to me (laughs). Don't call it shill bidding. Then I won't be accused of shill bidding. Yes. I mean - I've got people. "I've got some of my big clients who buy big items off me, I look after them. So I can get on the phone to America and say: Mr XXXX . . . you're a multi-millionaire. You buy a hundred grand's worth off me a year. Do me a favour would you. Just put - yeah. Exactly." He claimed eBay would never follow up a complaint against him for shill bidding because he generated about £15,000 a month in commission for the company. "Are they going to ban somebody who's making them the best part of 15 grand a month? No," he said.

After being told that he had been talking to an undercover reporter, Paraskevaides denied that he had ever shill bidded on eBay and claimed he was talking about clients who sometimes bid on expensive items if they wished to protect the price. However The Sunday Times discovered businesses that have been bidding on their own items. One leading dealer from London admitted last week that that he had shill bidded in the past.

A spokesman for eBay said he expected that the company would now launch an investigation into Paraskevaides. Anyone caught shill bidding risks a permanent ban. The spokesman added: "The change to the way bidder IDs are shown has already resulted in a safer environment for users."

I guess it could be because no one really knows who the bidders are.

eBay should get rid of the private bidder deal. It's the same thing RadioMart
uses..

>What does this have to do with BALUNs?

A random wire is not a Marconi antenna. A Marconi antenna is a 1/4
wave vertical with a formal ground screen/radial system providing a
second 1/4 wave image below the earth which allows the system to load
like (but radiate like) a half-wave antenna. A Marconi antenna is ca.
36 Ohms and needs no 9:1 or 10:1 transformer.

This is a failure of the EAS, not Clear Channel's business plan.
There ahould mechanisms in place to allow the local authorities to
override the regular programming when a time sensitive local emergency
warrants.

No, it's not. Shill bidding is when a friend or cohort of the seller (the "shill") bids on the seller's item with no intention of actually buying it; the point is for the shill to bump up the price that the actual, legitimate buyer will ultimately have to pay. As far as I know, a shill could use either their "real" eBay name or use the generic "Bidder 1" and still be a shill.

The "Bidder #1, Bidder #2" that you are seeing was a new rule imposed by eBay. I believe part of the reason they did this is to prevent people other than the legitimate seller from contacting bidders 2 through n and offering them a similar item, thus doing an "end-run" around eBay and bypassing having to pay posting fees and commissions to eBay.

BTW, you, as a *viewer* of the auction, see "Bidder 1, 2", etc. The *seller* still sees the real/actual bidder names and locations.

EAS is that mechanism. My understanding is that the local authorities failed to activate it, or failed to activate an alternative local plan that, if activated properly, would have alerted personnel who *were* on duty at the Clear Channel stations and resulted in the broadcast of an alert.

In any case, how much good would it have done if an alert had been broadcast over Clear Channel's stations? They may have a 95% *share* of the listening audience at 2am, but how many people are actually listening to the radio in Minot, North Dakota at 2am?

The right place for this type of alert is NOAA Weather Radio. Inexpensive radios are available that can be left on while sleeping, that can be used to awaken the owner when something like this happens. (you're not going to leave KZPR "Power 105" on all night every night in case there's a disaster - the disaster will be when you try to function in the morning without sleep!)

While we're at it, the EAS (and this should happen at the state level) should be modified to stop running alerts over excessively large areas. For example, several recent Amber Alerts issued *statewide* in Tennessee in the early-morning hours. A Memphis resident can do nothing about a child abduction in Bristol 400 miles away at 3am; if you keep waking them up for this kind of alert, they're just going to turn off their NOAA radio. (and next time there's a chemical spill in Memphis...)

Can you or someone provide a direct link to FCC busts on GMRS or MURS?
I must be searching wrong, because I could find no busts. Heck it is
very
hard to get the FCC to act in cases of deliberate interferene on the
ham bands.
And I guess you would have to run a gazillion watts before the FCC
would take
any action on 11M CB these days.

The FCC is not a rules enforcement agency these days, it is a
frequency broker.
The whole move to HDTV is so the old NTSC freqs can be auctioned off
to the
highest bidder. The FCC is so busy selling freqs they have little to
no time
for most enforcement actions. Sad but true.

And I think the FCC has given up on technical standards for TV,
regardless of
ATSC or NTSC, it all sucks big time. Black in NTSC should be 7.5IRE,
all of the
local stations run black levels from 0 to at least 20. Synchronous
switching,
in a dream. If the FCC can't/won't enforce the most basic TV
standards, violations
of which used to create serious lissues for TV stations, I suspect you
would have
to threaten an important politico, interferr with a public safety
(fire or PD) or show

a bare boob during the superbowl to get any attention from the FCC.

I will ask again, can someone provide links to the massive busts of unlicensed
GMRS bootleggers or MURS?

Beyond a certain value everything defaults to concealed identities (i.e.
bidder1, bidder2, etc.) and I think that the breakpoint is $200.

Here is the information from Ebay:

"As the internet evolves, eBay continues to strike a balance between
preserving transparency and protecting our Community of members. eBay
has decided to change how bid history information is displayed so bad
guys cannot target bidders with fake offers using this information. In

certain cases, some bidders will no longer be able to view Bidder User IDs on the Bid History page. Your User ID will be shown only to you and the seller of the item you're bidding on. Other members will see an anonymous name, such as Bidder 1, applied consistently to the Bid History page".

> 36 Ohms and needs no 9:1 or 10:1 transformer.

A Marconi antenna is not necessarily a quarter wave vertical but is a
quarter wave or longer.

In the beginning of the development of radio technology there came about
two main styles of antennas. A Marconi style is a one element where the
other is a ground. Hertzian's are balanced antennas with two elements in
the air.

Irrespective of antenna style 1/4 wave is a basic element.

Single element antennas can pick up static electricity that can damage
radio front ends. Using a voltage type UNUN is best type to use due to
the separate windings. The voltage type also lends itself to fractional
impedance transformations.

Balanced antennas can be of a closed RF loop design where the higher
efficiency of the current type transformer is a plus and static

electricity is not an issue.

Why and why do you care? In this day and age it is irrelevant to ham radio. There are better modes that use less bandwidth like PSK 31 for example. It IS still used by a lot of folks however. I'd rather see people learn technical stuff instead to make them better electronic experts and communication experts. Morse will never be dead but as a requirement it's about time. They could double the number of written questions and get better hams IMHO.

Maybe he can share a cell with the president of Israel after he is
convicted of the rape charge:

JERUSALEM - Under a torrent of demands for his resignation and a
growing movement to impeach him, Israeli President Moshe Katsav asked
parliament Wednesday for a leave of absence. The move came one day
after the attorney general announced he planned to charge Mr. Katsav
with rape and other sexual offenses following months of investigation.

Katsav, who said Wednesday he would resign immediately if he is
officially indicted, now sits perched at what many Israelis view as
the pinnacle ï¿½ literally and figuratively ï¿½ of a government in a state
of moral decline.

A slew of civilian and military leaders here are under investigation
for various types of wrongdoing, and the nation's regard for its top
elected official is at an all-time low, with Prime Minister Ehud
Olmert garnering approval ratings as low as 14 percent. And although
Israelis have been showing increasingly less regard for their
once-venerated institutions over the past decade, this new slide in
public confidence coincides with a range of indicators pointing in the
direction of change...

http://www.csmonitor.com/2007/0125/p06s01-wome.html

I'm beginning to understand why Israel and its government are so
appealing to Washington and its politicos; they're both so corrupt
they can't help but be in bed together.

It won't be Ma Bell. Ma Bell served everyone, rural and urban alike. Ma Bell's rates were reasonable and understandable. Ma Bell didn't skimp on maintenance to make sure the stockholders got richer. Ma Bell sold *service* not *plans*.

Interesting conditions today at midday. From Chicago with my DE1103 (@1900z), I'm picking up WWV on 10kHz, rather weak but audible. On 15kHz, I'm getting WWVH nearly as audible, with not even a hint of WWV. Nothing on 20 though.

I guess I'm not surprised - shills have been a part of Ebay since the
early days. It is so easy for an unscrupulous seller to set up fake
bidder ID's, or to just call a few buddies who will cross bid on one
anothers auctions. And now Ebay has made fraudulent bidding even
easier by hiding id's. Apparently Ebay is rolling out another
improvement that hides bidder id's and bidding history.

In one of the private Grundig radio fora I belonged to a few years
ago, it was routine for members to bid up another members auction. They
even bragged about doing it before the auction closed.

The rationale as explained was that bidders enter the contest with a
maximum bid. If that's the price the bidder was willing to pay anyway,
and a few shills bid up to near that figure, what's the harm?

I don't know what the repercussions may have been, I resigned the
group. But the group itself didn't last very long.

Yeah but.....I predicted that they were going to solder the Bell
System back together almost 15 years ago. During those years my son
has worked for three of the incarnations (Pac*Bell, SBC, and now ATT)
and never left the same employer....now add BellSouth into the mix.

I think you'd find if that were enforced, many bottom-of-the-line radios would simply disappear from the marketplace, and many devices that contain a radio essentially as an afterthought would simply drop the radio function.

Speaking of RadioMart...

I've never dealt with him, but read all of the negatives about his
auctions here. I have no reason to doubt any of these reports as they
usually come from those who have a knowledge of shortwave radio that I
regard highly. I just would like to know if anyone here has ever had
a good experience buying something on eBay from Radiomart,
particularly the higher end stuff. oes anyone have anything good to
say about him?

I though we were discussing BALUNs.

Shunt feed and delta match are tuned circuits with narrow bandwidth
whereas a BALUN or UNUNs are broadband. SWLs are not transmitting so the
need to tune the antennas output match at some frequency is not
desirable.

A few decades back there was an "all channel radio bill" introduced in
Congress that would have mandated that all radios over $15 be FM
capable. Did that ever get off the ground?

Y'know, I don't know!

Of course, today there are a lot of radios out there that *only* get FM.
(usually not very well...)

I'm inclined to think the relative extra cost of adding NOAA to an
inexpensive AM/FM portable today would be considerably greater to that
of adding FM to a early-1970s AM set. You'd need an alphanumeric
display and enough buttons to handle programming. Either that, or you'd
put in a NOAA receiver that simply opens up whenever it detects modem
tones, without bothering to decode the data. I suspect most customers
wouldn't stand for that. The addition of FM to an AM set simply
involved adding an AM/FM switch and inscribing a few more numbers on the
existing dial.

And then, there's the question of battery life.

Is there a child molesting pervert Catholic priest in your neighborhood? Find out at http://www.bishop-accountability.org/member/index.jsp Search by diocese, state or name

"According to the John Jay report commissioned by the U.S. bishops, allegations of sexual abuse were made in 1950-2002 against 4,392 priests. The number is generally believed to underestimate the problem. A few bishops have released the names of accused priests, but no official list exists of U.S. priests who have abused children and vulnerable adults. We present the most complete list currently available, culled from media reports and legal documents - with many photos, assignment records, and source articles."

http://www.bishop-accountability.org/member/index.jsp

Huh? The addition of FM involved a VHF front end, a different mixer oscillator operating in the VHF range, different mixers, a different detector, and in those days, AFC functions to deal with the problem that the local oscillator drifted.

So, aside for the audio amp and the speaker, not much was common.

A NOAA receiver would need to find a NOAA signal to listen to --- probably automatically, since most users would not bother to find one locally, especially if they were traveling (think of the radio in a car). It probably could be fixed on simple alert tones, but still, would need the ability to find, tune, detect, and process the 162 MHz narrow band FM signals. Not trivial, and of very limited value when that radio is not in use.

If you live in tornado country, you probably want to keep a NOAA radio on listening for alert tones all the time. When I was in Kansas last month, my relatives there had one. A radio that is turned off most of the time would not do the job.

Of course, in the San Francisco Bay area we are more likely to have earthquakes than a tornado; earthquakes come with their own alerting system.

No, I mean in terms of user interface.

'Course, I suppose in those days (early-mid 70s?) "internals" weren't
nearly as cheap as they are today.

> Of course, in the San Francisco Bay area we are more likely to have
> earthquakes than a tornado; earthquakes come with their own alerting system.

True enough. Though apparently you do occasionally get the same kind of
emergencies the rest of us do. One day, driving near Meridian,
Mississippi, I heard the EAS tones go off. Skies in Mississippi were
clear, with not a hint of severe weather. Announcer came on and said
"The National Weather Service has issued a severe thunderstorm warning
for...

Marin and Sonoma Counties in Northern California."

(it was a satellite-fed translator of a San Francisco station...)

It is an open invitation for sellers to use shill bidders. You can't
tell the name of the bidder nor can you find out what that person has
bid on. Nor can you tell who left the feedback.

2400. Something similar to the E100

E-Bay - no sweat
Just say to yourself
Self - how much is this item worth to me
Make a max bid once only (they use an increment system)
If you lose - you lose -- don't rebid
Another will come along

I just bought some NIB high end knife sets for less than half price of anywhere in stores or on the web. Had to enter 10 different auctions - lost eight of them - but scored big time on the other two.(:-)

Love dem auctions -- some great deals to be had.

But ya got to learn how to do it

As I say to folks grumbling about e-bay --- What part of an auction don't you understand ?

CL

> that the local oscillator drifted.

Not to mention another IF strip. And in those days, VHF was literally magic. When I was a kid, I built the Heathkit AM and FM tuners. The AM tuner worked at power up. A couple of tweaks and it was ready for action. The FM was stone dead when it came to output. I ended up taking it down the street to an older kid's house (he was a ham) and he bench aligned it for me; no other "repairs" were required. FM was touchy in those days.

Now, VHF is practically DC.

Manipulation of auctions whether on Ebay or elsewhere is nothing new.
Pre-auction bidding agreements and bidding against the box have been
around for as long as there have been auctions. Unfortunately Ebay
seems to have taken steps to make it easier for sellers to create the
illusion of buyer interest.

2404. Re: PBS's Newshour segment on VOA-BBG (FRI 26 JAN)? Do MPEG copies exist (that are fully downloadable)?

>
The Real Audio file is 10 minutes. The trouble is that you need to use
the real media protocol, RTSP:// or the older PNM:// and not something
like HTTP://.

There was a program called Streamworks VCR which was in beta when
RealAudio sued Streamworks. It knew how to download rtsp:// and
pnm://. (and also Windows Media mms://) Streamworks later went out of
business.

Rumor has it that you might be able to find, with a Google search on
Streamworks, a suite of cracked and improved Streamworks beta programs
including vcr and a program which can convert Real Audio files to MP3.

Rumor also has it that the program which converts RA to MP3 might need
the following workaround to the change of name of some DLL's in recent
versions of Real Audio:

cd \Program Files\Common Files\Real\Codecs
copy cook.dll cook3260.dll
copy sipr.dll sipr3260.dll

There are also several other programs that can download RTSP including
the shareware download manager NetTransport.

The programs which still have an official existence may be able to
handle newer versions of Real Audio and Windows Media than the dead
programs.

Message-ID: <ia8sr2105bt1kgpi2n6n4ftob7cgq68b1o@entropy.org>
Source record: 104431

Hmm - as far as I can see

http://www.pbs.org/newshour/rss/redir/http://www-tc.pbs.org/newshour/rss/media/2007/01/26/20070126_voa28.mp3

and

http://media.pbs.org/ramgen/newshour/expansion/2007/01/26/20070126_voa28.rm?altplay=20070126_voa28.rm

are both the same sound bytes, both just over 10 minutews long.

As I said, the difference between the two is that the mp3 file can be
downloaded by any program which knows how to do http, such as a
browser.

On the other hand, the .rm file is really a .ram type file - a pointer
to a Real Audio sound file.

rtsp://rm.z1.mii-streaming.net/media/pbs/quicktime_real/newshour/expansion/2007/01/26/20070126_voa28.rm?altplay=20070126_voa28.rm
--stop--
pnm://rm.z1.mii-streaming.net/media/pbs/quicktime_real/newshour/expansion/2007/01/26/20070126_voa28.rm?altplay=20070126_voa28.rm

This file can be listened to with a Real Audio player. But it cannot
be downloaded unless you use a third party tool like the
sued-out-of-legal-existence Streamworks VCR or NetTransport.

2407. Worldband vs. Shortwave on Google Trends

Newsgroup: rec.radio.shortwave
Date: 2007-01-29 17:35:30 UTC
From: simart@gmail.com
Message-ID: <1170092130.456467.254810@l53g2000cwa.googlegroups.com>
Source record: 104402

Don't know if people here are familiar with Google Trends
(www.google.com/trends) but it analyzes search terms by region and
volume. I did one to compare "world band" vs. shortwave:

http://www.google.com/trends?q=shortwave%2C+%22world+band
%22&ctab=1&geo=all&date=all

And I thought it was interesting that shortwave is used much more
frequently than "world band" and
that the top regions searching (as a ratio of total search volume) for
these terms were:

1. Canada
2. United States
3. Ireland
4. New Zealand
5. United Kingdom
6. South Africa
7. Australia
8. Singapore
9. Sweden
10. Malaysia

I thought it was kind of interesting. Also there is a general downward
trend in interest over the past few years.

> Way to work toward that "colorblind society," folks.

You have to shake your head when learning that there are those who continue believe that "Diversity" and the 'celebration of differences' is the way to promote equality and a color-blind society. Instead of recognizing that the promotion of group identity is a political construct used specifically for political gain.

Civil rights became a clich&#65533; when it went from a moral cause to a political one. We should have nothing but contempt for those who pushed for - and continue to promote - civil rights solely for political gain.

You can start by sending your children to private schools or home school them.
The public school system is not a school at all but an ideological brainwashing factory.

That reflects what most of us know - there is less and less to hear on
the HF bands and there are fewer and fewer people tuning in. The
shortage of messages even remotely related to shortwave on
rec.radio.shortwave is yet another indicator of how shortwave radio
has changed.

Hans,
I love my TenTec RX-350 and I've had Drake R7A's and even the professional model Drake 4245 (which was a commercial version of the R-7A with a RV-75 Synthesized Tuning module built it). I've never used a Drake R-8B. However, the TenTec has been the very best shortwave radio that I've ever owned. As a bonus, you can easily hook the RX-350 up to your computer's soundcard for DRM reception (I love listening to Radio New Zealand in high fidelity sound).

The RX-350 allows for super high-fidelity shortwave reception since you have an almost infintely adjustable bandwidth up to 12 kHz width and the stability of the receiver is such that you can push the SSB button and use ECSS to receive excellent fidelity shortwave without selective fade distortion. This is as good as sync-detection on a radio that's as stable as the TenTec. However the sync-detector on the TenTec stinks.

I'd keep the RX-350. I love mine.

> have had this problem with CB's.thx in advance
>
GMRS uses Frequency Modulation. CB is AM or ssb.

So your GMRS radio is not as susceptible to engine interference (ignition
noise) as CB radios.

FM radios have limiters which cut out the AM (noise) if the signal is strong
enough

Using shielded ignition wires usually removes all ignition noise. Other
noises such as fuel pumps, computer modules can also cause noise.

For noise abatement -- see URL
http://ac6v.com/opmodes.htm#MO

As for the car shielding radio waves -- yes to some extent, but lots gets
thru the windows,etc. Your cell phone is a good example.

Your best answer is to try a field test between two cars.

Your noise may vary
Good Luck -- CL

What is, and has been, needed is fresh blood in the hobby. How many THOUSAND more hams would there be right NOW if the dumbasses (you know who you are) that have fought dropping the pathetically obsolete requirement for Morse hadn't been so short-sighted?

Morse is a wonderful thing. Seriously. I know it to be true. But driving it down the throats of people that have no interest in it = insane. Like requiring a 747 pilot to be fully competent with the operation of Sopwith Camel. Very cool stuff, but how is it related to what they intend to do?

More hams would have had the effect of drawing more attention to HF. What ham hasn't introduced family, friends and even strangers to HF listening in one way or another?

More hams = more "evangelists" for the hobby.

2446. Fat Assed Slobs In White Trash States

Newsgroup: rec.radio.shortwave
Date: 2007-01-30 02:24:03 UTC
From: asswideshut@138mail.com
Message-ID: <1170123843.754914.304100@a34g2000cwb.googlegroups.com>
Source record: 104445

How funny is this! West Virginia, the white trash capital of the USA, has become so populated with disgusting fat slobs the government is willing to pay for their 16 week weight watchers program. West Virginia has the third-highest percentage of obese residents in the country, behind Mississippi and Tennessee. There seems to be an inverse relationship between obesity and IQ going on here. Makes one wonder why the federal government would object to the lame Dixie secession movements that pop up periodically. Promises promises.

By TOM BREEN, Associated Press Writer
Sat Jan 27, 2:41 AM ET

CHARLESTON, W.Va. - Facing more than $100 million in annual costs linked to obesity, the Medicaid program in one of the country's most overweight states is turning to a familiar name to help residents slim down.

Up to 75,000 West Virginians will soon be eligible for free weight loss courses through Weight Watchers, thanks to an effort by the state Medicaid program and the health benefits group UniCare, the largest provider of Medicaid coverage in the state.

Medicaid clients of Unicare who obtain a physician's referral and score within specific ranges on the fat-measuring body mass index will be eligible to take up to 16 weeks of courses for free from Weight Watchers. The group is famous for its regular meetings and system of assigning points to different foods.

Advocates of the program - including the state's first lady, Gayle Manchin - hope the partnership will improve the health of residents in the state and serve as a model for other states that face a similar problem. West Virginia has the third-highest percentage of obese residents in the country, behind Mississippi and Tennessee.

"It's not just a West Virginia problem, it's a national problem," said John Monahan, president of state sponsored programs for Indiana-based Wellpoint Inc., of which UniCare is a subsidiary.

If the program is successful in West Virginia, Wellpoint will look at rolling out similar programs in the 14 states where it provides benefits, Monahan said. Those states are California, Colorado Connecticut, Georgia, Indiana, Kentucky, Maine, Missouri, Nevada, New Hampshire, New York, Ohio, Virginia and Wisconsin.

Last year, Tennessee's Medicaid agency, known as TennCare, completed a pilot program for 1,400 Medicaid recipients who paid nominal fees to participate in Weight Watchers. Over a six-month period, they lost a

combined total of more than 8,000 pounds, according to TennCare spokeswoman Marilyn Wilson.

"We feel confident that this could really delay the onset of diabetes, heart disease and even stroke," she said.

If such programs can work on a large scale, it could be a boon not only to the health of residents, but to fiscal stability. Medicaid programs are available to low-income residents, who are also more likely to be overweight and obese than higher income residents.

In West Virginia, Medicaid - at more than $2.1 billion - is the largest single item in the state budget. And in fiscal year 2002, the most recent year for which data is available, the state estimates that it spent nearly $140 million on medical and pharmacy costs related to obesity.

"It's like smoking was years ago," Monahan said, referring to growing prevention efforts. "I think all states are going to have to start addressing this."

Dr. Mary Vernon said states have a vested interest in encouraging weight loss, but isn't sure West Virginia is going about it the right way.

"The statistics would show people that really need help need a more individual and supervised program under a doctor's care," said Vernon, president of the American Society of Bariatric Physicians, an association of physicians who specialize in obesity and weight loss.

The potential impact of the program also is a relative drop in the bucket considering that about two-thirds of adult West Virginians are overweight or obese and UniCare covers only about 75,000 of the estimated 300,000 to 370,000 residents covered by Medicaid.

It's not clear how much money the state might save from having healthier residents, but state Medicaid spokeswoman Shannon Riley says: "It's not about immediate cost containment. The Medicaid program will see savings down the line, but this is about slowing the growth of lifestyle-induced diseases and disabilities."

As a novice who recently began DX-ing on a Realistic DX-160 and a Radio Shack DX-398/Sangean ATS-909, I'm sorry to hear that shortwave broadcasts may not be what they were when I was scanning signals with a Hallicrafter -38 years ago. Still, it's pretty exciting to dial into a band with a concentration of stations from around the world.

Regarding the missing BBC broadcasts, I think I'm getting one or two BBC broadcasts, though I'm not sure where they are broadcasting. Can anyone tell me when, and at what frequency, I should try to get BBC? It's interesting that I can get five or six stations quite clearly from their internet web site, including recordings of recent broadcasts. Also listened (on my computer) to their live broadcast of the Cambridge King's College Christmas music.

its worse than that. people actually DIED as a result of Clear Channels Business model.had they implemented EAS properly in those stations in Minot, folks would have had actual information in a real emergency.

The problem here is that all the broadcasters are seeking to the bottom line, when they should be thinking of the communities that they serve. It may take a few more deaths, but there is some rumor afoot to make installation of EAS type equipment mandatory in all stations and in all facilities transmitting over the air. sure, it may cost a little and the broadcasting companies (read that as big content) will surely complain bitterly. However, they should be looking at the problem this way: will it cost more to install the equipment, or get sued out of existence because they didn't and someone died as a result?

small problem, NO ONE was answering the phones at those stations.
We have a couple of clear channel stations located in smaller communities
here in Arizona and 90% of the time, they are "robot" stations (unmanned
unless something breaks).

>
> In any case, how much good would it have done if an alert had been

uh yeah.... it would be helpful of those were built into a standard alarm
clock+radio. a stand alone unit folks simply aren't interested in.

>
> While we're at it, the EAS (and this should happen at the state level)

> For example, several recent Amber Alerts issued *statewide* in
> Tennessee in the early-morning hours. A Memphis resident can do nothing
> about a child abduction in Bristol 400 miles away at 3am; if you keep
> waking them up for this kind of alert, they're just going to turn off

> their NOAA radio. (and next time there's a chemical spill in Memphis...)

there is a reason for statewide alerts man. how far do you think someone in a car can travel in a couple of hours? try about 120 miles (at speed limit). now, say that amber alert was delayed by an hour because no one knew the child in question was missing for that hour, that suddenly makes the search area an additional 60 miles or so (you can figure out the area inside a search radius thats 180 miles from center). in any case, it wouldn't take the perpetrator long to make the 400 miles (especially if he/she were driving at greater than speed limit).

the purpose of the amber alert system is to have the most pairs of eyes looking out over the largest practicable area (such as here in Arizona). We have had would-be kidnapers try and take kids "south of the border here" in less than 5 hours from time of abduction to time they were caught. the only reason they were caught was the alert went state wide (and Arizona is a big place compared to the likes of Tennessee). 6 hours. thats not a lot of time.....

consider these points next time your kid goes missing and you called for a "local only" amber alert and it turned out the kidnapper was already outside of that zone....

Why do conservatives listen to lie after lie by republicans and
believe
> every bit of it?

The same reason they believe that republicans are conservatives. Most are inflicted with a terminal case of the simples. Conceptual thinking or anything that can't be reduced to either/or, right/wrong, black/white is not only confusing for them it also disturbs their sense of well being. Thus the inordinately high number of evangelical Christians, Southerners, white trash in the ranks. A very sad phenomonon when you ponder it.

Yeah, and those GMRS radios smell really bad. What chance do you think
the FCC will have catching someone running around with a hand held? Not
very good.

I also was greatly sadened by this. What a magnificent animal!
Beautiful animals confirm my belief in a Divine creator. Unlike
humans, they are completely without guile, animise, greed, gluttony,
jealousy, avarice...the list is long In short, Animals are perfect
creations. Mankind's horrendous treatment of animals is no doubt an
affront to God.

P.S.
A preemptive FUCK OFF to the moronic "Christians" who will surely
feel called by God to reply "why it says right thar in that thar book
of Genesis that God gave man dominion over the beasts of the
earth...BLAH BLAH BLAH... Have someone with a brain explain the
difference between dominion and exploitation, cruelty, extinction,
etc. okay Mr. Right Reverend Billy Bob?

I care and I'm sure many others are interested. Don't pay any
attention to asswides. He only speaks for himself. I think most of the
anti-virus programs you mentioned are really adware and spyware and
would not be effective against viruses. AVG is a pretty good program.
Do you have the new upgrade and is it upgrading itself daily? I think
the old version is no longer supported.

Support for AVG 7.1 has been extended until mid February.

AVG has a very good capture history, depending on O/S, IF it's kept
current. But it MUST be kept current.

Surfing while in administrator mode, though, can expose the O/S to
the full nastiness of the internet. And should something slip in under
cover, and vulnerabilities can be exploited without attention. That's
why, under Win2000, XP and now Vista, it's recommended that two accounts
be created. One, Admin. The other, a restriced user account used for
daily activities. In this way, modifications are more difficult to make
to the O/S, uncommanded installations can be halted without an
administator password, while general activities proceed unmolested.

It's not a panacea, but it does add an additional layer of resistance
to exploit.

Yeah right...what a load of Democrat inspired pet-pork-barrel-program
crap!

I can just see 370 pound single mom Mary-Sue Whitetrash in her Puddin
City, W.Va trailer house eating up her monthly Weight Watchers frozen
dinners in one week between trips to the local KFC to load up on
buckets of the Colnel's deep-fried greasy treats..... Baaa
hahahahahaha!!

In other news, I see Barbaro has died, or was "put down".

How sad.

Let's hope some fat chink businessman buys his carcass and sends it
back to china along with other dead horses so some tanning factory can
use Barbaro's hide to make a dozen pairs of combat boots for the
People's Liberation Army. :)

I know, and I don't completely disagree, but as I wrote: "Times Change".
What if, way back when, solid state hardware had been dis-allowed? I'd
be happy with it. The ignorant fools that can't even solder would have
been kept out of "my" clubhouse. Life would have been good. But the
hobby would have crashed and burned years ago. Bad.

The failure to adapt to change may have doomed the hobby. It will be
tough, perhaps impossible, to reverse the trend now. : (

We need to get kids interested in radio or the hobby will be gone in a
very few years.

Well, two comments I should have added to my original response:

The TNC, in addition to the "TOR" modes is also great for packet
(AX.25). Unfortunately, packet, as used by hams, is mostly dead.
However, many satellites still use AX.25 for sending telemetry, the
latest example being "Pehuensat-1, the new Argentinian satellite.

I also should have stated the obvious, that software (as used by sound
cards), is much more flexible than firmware (as used by TNCs).

To address your comments above, yes, a cheap computer, sound card and
software is fine. However, I might disagree with you about "a cheap SW
radio". Receiver stability and selectivity are very desirable
characteristics for copying digital and usually don't come too cheaply...

Ser Locutor
A estranha fantasia,
que atormentava minha mente,
parecia-me algo impossível.
Na verdade o medo deixava-me inibida.
Naquela tarde de verão,
encontrei-me com o meu mestre,
aquele que realmente me fez acreditar!
A confiança que meu velho pai fizera com que eu depositasse,
me fez ter coragem de confessar o que eu sentia.
D'fronte a um microfone, inúmeros botões,
sem falar na tecnologia.
Meu pai me permitiu,
alias me deu autonomia para que eu soltasse a voz
e sentisse realmente o prazer da coisa.
Meu sorriso era incondicionalmente difícil de não se notar,
alias meus lábios se tornaram a fonte de minha proeza...

Granted, a quality receiver is the way to go. I use here at this
location both a Icom R71A and a Yaesu FRG-7. I like to use the Yaesu for
listening to the routine shortwave broadcasts and some of the ham radio
voice transmissions. The audio quality is great. The filter for the
Yaesu seems somewhat wide. The Icom R71A is my favorite for digital
work. I can see that digital shortwave communications will be the
growing sector of shortwave and Ham radio in the future. Just a cheap
computer (I paid 25 bucks for mine) and a cheap computer soundcard is
all that seems to be required, and a good shortwave receiver.
What are some good internet sites for some free downloads of digital
software programs, K8TV?

Hillary at the Helm
By JOHN BATCHELOR
January 24, 2007

On the weekend Senator Clinton took command of the race for the Democratic nomination for president, I returned to the Chappaqua Starbucks at the corner of Greeley and King streets to survey the field from frosty Westchester. The after-church SUV traffic scurried by the lawns sprinkled with snow. The latte drinkers entertained themselves with vanilla and cinnamon. And in the newspaper box facing the bay windows, Mrs. Clinton's bright-eyed face on the front page of the county daily proclaimed her clever announcement on Saturday, January 20: "I'm in. And I'm in to win."

The moment is auspicious, and is reminiscent of another Saturday that changed the course of American history. On Saturday, March 12, 1864, the War Department in Washington issued General Orders 98, "Lt.-Gen. U.S. Grant is assigned to the command of the armies of the United States. The Headquarters will be in Washington, and also with Lieut.-Gen. Grant in the field." With this terse dispatch, a crafty, obtuse Illinois son became the one who could hammer together the dysfunctional Army of the Potomac and set it on its grinding course for Richmond while turning the ferocious William Sherman loose on the enemy. In sum, Ulysses Grant became the man who knew how to win.

Mrs. Clinton also knows how to win, and like Grant, she will not burden herself with strategic pontificating from Washington. The candidate immediately goes on the road both actually and virtually in order to tour her forces and to recruit more for the wasting contest ahead. Mrs. Clinton knows that the first competition is for the loyalty of those who twice financed her husband's campaigns. And she also knows the sweaty labor is to encourage her raw base while she plans for the general election. Certainly she has in her husband as able a subordinate as Grant had in Sherman, and Mr. Clinton will be given his head to take Atlanta, Charleston, Des Moines, and Manchester and to dash wherever he is needed to grab headlines and demoralize the opposition.

Senator Clinton is a fighting general for our times with the strengths of clarity of command - "Let's go to work" - and also of personal courage. Her recent trek to Baghdad included a corkscrew C-130 landing through dangerous weather and a high-speed armored vehicle convoy from the airport to the Green Zone along the notorious improvised explosive device trap called the Highway of Death.

Senator Clinton's "I'm in" remarks suggest that she has chosen to campaign not only with the dutifulness of Grant but also with the sophistication of another victorious general who gained the White House, the Europe-crusader

Dwight Eisenhower.

In 1952, Eisenhower's challenge for the Republican nomination against the anti-communist Bob Taft of Ohio, and then in the general election against the internationalist Adlai Stevenson of Illinois, was to convince the electorate that he was a public servant committed to improving the daily lives of Americans and not just a tough guy looking for a scrap with Moscow. Eisenhower's finesse drove Taft too far to the right and Adlai Stevenson too far to the left, whereby Ike won the nomination easily and the November election in an Electoral College landslide.

Mrs. Clinton faces a challenge in her own party not unlike what Eisenhower once faced in his party, with the logical caveat that today's Democratic Party features its left wing. Senators Obama and Edwards both press Mrs. Clinton in the primaries in the way Taft once threatened Eisenhower: by playing to the party activists, in this case the anti-war, pacifist, isolationist voices. Mrs. Clinton's maneuver to blunt the caviling to her left is to emphasize her domestic agenda of health care, education, and retirement security in a "national conversation" - while speaking tersely of the war. The ambiguous, "How do we bring the war in Iraq to the right end?" will frustrate the edges of her party while satisfying the crucial center that she will do what is appropriate overseas. Mrs. Clinton will do to her rivals what Eisenhower did to Stevenson, forcing the opponent to speak more and more of war to distinguish himself, while Mrs. Clinton stays on message with her homespun autobiography, "I grew up in a middle-class family in the middle of America."

Notably, Mrs. Clinton's "I'm in" speech goes out of its way, both on video and in the longer text, to avoid mention of September 11, the global war on terrorism, Iran, and even the archnemesis Osama bin Laden. What she leaves loudly unsaid of national security threats will serve her even better in the general election, where Senator McCain or Rudy Giuliani will make the mistake of trying to out-commander-in-chief a woman who does not intend to gab of her generalship from on high. Like Grant, she just intends to win.

Mr. Batchelor is host of "The John Batchelor Show," now on hiatus.

http://www.nysun.com/article/47249

Submitted by John Drexel, Jan 25, 2007 11:55

Mr. Batchelor is, as ever, thoughtful, entertaining, and provocative all at once. However, the comparison of Hillary to Ulysses S. Grant is laughable. Whenever has She Who Must Be Obeyed displayed Grant's directness and force of character? I can, more likely, imagine her uttering (to her sycophants, in the privacy of her inner sanctum, of course) words such as these:

"I find myself in a strange position here: President, Cabinet, [generals] and all deferring to me. By some strange operation of magic I seem to have become the power of the land. . . . [I] am quite overwhelmed by the congratulations I received and the respect with which I was treated. . . .

[Congress seems willing] to give me my way in everything. . . .
[C]onversation after conversation [calls] on me to save the nation. . . . I believe they love me. . . . God has placed great work in my hands. . . . I was called to it; my previous life seems to have been unwittingly directed to this great end."
And words such as these:

"I am daily becoming more disgusted with this imbecile administration. . . . [The Secretary of State] is . . . a meddlesome, officious, incompetent little puppy. . . . [The Defense Secretary] is a garrulous old woman. . . . The president is nothing more than a well meaning baboon. . . . It is sickening in the extreme . . . [to] see the weakness and unfitness of the poor beings who control the destinies of this great country.
. . . The president is an idiot."

The Saviour of the Republic who penned these words was none other, of course, than George B. McClellan, a man of immense self-importance and minuscule achievement who, following his distinguished [sic] performance in the early years of the Civil War, carried the banner of the Democratic Party as its presidential candidate in the election of 1864. What do the history books have to say about President McClellan?

Oh--and the "baboon" and "idiot" president to whom he referred? Abraham Lincoln.

I rest my case.

>King's College Christmas music.

Go the their web site's home page for the World Service
<http://www.bcc.co.uk/worldservice> (or something like that).

About half way down the page is the box where you enter in your
city and get the daily or weekly schedule. Next to that is a
link labeled something like "Shortwave Update". This will take
you to a page that will give you the transmissions schedules for
their diffrent regional broadcast tracks.

Here on the West Coast of North America, I get transmissions targeted
to East Asia and SouthEast Asia in the early morning, and morning
(until about 9 AM Seattle time) and then again from (4 PM (0:00 UTC) to
after sundown. (9740, 6195, 5975, 3915 kHz morning, 15285 afternoons).
Then transmissions aimed at North Africa in late morning (12095).
And then West/Central Africa in early afternoon (15400). And there's
an hour in the afternoon with a Caribbean target that I can't remember
off the top of my head.

The different tracks have different schedules, but you can go the
the home page and use the above mentioned box to get a program schedule
for any city in the world.

This time of year, with the sun illuminating to the south, it's pretty
crummy listening in the northern hemisphere, but propagation gets a
lot better during most of the year.

<asswideshut@138mail.com> wrote Neo-Kommie Propaganda

> DEMOCRACY NOW is the best on the list. Host Amy Goodman is one of the
> best journalist in America.

"Amy Goodman is an extraordinary journalist, in the grand American tradition of Lincoln Steffens, Heywood Broun, I.F. Stone," said Howard Zinn, a Marxist historian and frequent guest on Democracy Now! "Her contribution to our culture is unique, bringing information and ideas to her listeners which they cannot see in the major media."

Zinn is correct. And Democracy Now! proudly posts his quote at its web site.

I.F. Stone was a longtime radical who devoted the last years of his life to undermining America's war against Communism in Southeast Asia. Heywood Broun ran for congress as a socialist but was later expelled from the Socialist Party because of his closeness to Communist Party members and his membership in Communist front groups. "A one-time admirer of Mussolini and his Fascist regime, [Lincoln] Steffens did as much as any American to swing the idealistic youth of the thirties toward what Max Eastman called the 'pro-Soviet parade,'" wrote Kenneth Lloyd Billingsley in his 1998 history Hollywood Party: How Communism Seduced the American Film Industry in the 1930s and 1940s. "Steffens told Marxist scholar Sidney Hook that his own motive for supporting Communism was emotional, that he had given up trying to think things out and simply 'felt' that the Communists were right." As a journalist, Steffens whitewashed atrocities committed by the Soviet Union.

Amy Goodman fits almost perfectly into the tradition of these Marxist-socialist propagandists. The difference is that Goodman has had the skill, entrepreneurial or exploitative, to make herself a millionairess.

To decipher and deconstruct the cult of Democracy Now!, note that key figures around Goodman such as radio producer Mike Burke and television producers Ana Nogueira, Elizabeth Press and John Hamilton all have backgrounds in Indymedia, a leftwing Internet movement steeped in the views of radical political cult figure Noam Chomsky. Nogueira also has written for the Chomskyite Z Magazine.

Chomsky, a linguist at the Masschusetts Institute of Technology (MIT), teaches that the United States is the successor to Nazi Germany, that the Holocaust might never have happened, that Communists are better than capitalists, and that Western democracy is fraudulent because corporations "manufacture consent" through media manipulation.

In June 2002 Democracy Now! became a tax-exempt 501(c)(3) organization independent of Pacifica Radio. It continues to air on Pacifica-owned and affiliated stations. It is satellite-uplinked via the Pacifica Satellite

System, but also via the taxpayer-subsidized Public Radio Satellite System (PRSS).

"Democracy Now! is funded entirely through contributions from listeners, viewers, and foundations," says its web site. "We do not accept advertisers, donations from corporations, or donations from governments. This allows us to maintain our independence."

But serious questions have arisen about how Democracy Now! developed with the resources of Pacifica Radio and grants from the Carnegie Corporation, the Ford Foundation, J.M. Kaplan Fund and others - suddenly in 2002 became independent and the effective property of Amy Goodman without any recompense to Pacifica. This transfer included valuable assets such as trademarks, ownership of years of archived programs and interviews, affiliate station access and more.

And through a contract that remains secret, Amy Goodman is also receiving $1 million per year for a five year period that began in 2002, according to Pacifica Treasurer Jabari Zakiya, to continue doing what has become Pacifica's flagship morning news program. Goodman also is able to use a tax-exempt radio program and taxpayer-subsidized public radio satellite transponder to promote what may be her for-profit book and other lucrative activities.

Since you mention the KA33, make sure that you have the antenna cabling
set up correctly. Apparently it is easily possible to reverse the
control box when not paying attention, unsurprisingly resulting in much
worse reception. I also remember something about shortening the
connection cable improving things.

2517. Balanced feedline thoughts

Newsgroup: rec.radio.shortwave
Date: 2007-01-31 02:07:31 UTC
From: r2000swler@hotmail.com
Message-ID: <1170209251.285835.186430@j27g2000cwj.googlegroups.com>
Source record: 104465

Back in Nov 2005 there was a thread comparing coax with balanced
feedlines.

At that time I held the viewpoint that coax was "better" then balanced
feedlines
for almost every receiving application.

In the last few months I have been experimenting with antennas other
then the
common "long" wire antenna fed to coax with a 9:1 transformer.

For balanced antennas like active dipoles, significant reduction in
noise engress
can be obtained with balanced over coax if a true balan is used at the
typical
unbalanced HF antenna input. I have noted significant reduction in
common mode,
requiring much less ferrite, with balanced versus coax.

For the "long" wire antenna with a 9:1 I have not found a suitable
wiring scheme
for balanced to work better then coax.

Care must be taken in constuction to insure as much physical symetry
in the active
dipole as well as the balun at the receiver end.

While I am not a fan of loops, I suspect that with proper attention to
construction
and wiring, loops to could benefit from balanced feedlines. Acitve
loops will require
great attention to the power/RF combiner to insure that no un-balance
is added.
>From my limited experience, active loops are not a good choice for
balanced
for this reason.

In direct comparsions an actve dipole outperformed an ALA 1530 and a
WL1030.
So except for my ancient MaKay Dymek DA5, which I keep for sentimental
not
practical reasons, I have decided to not investigate loops any
further.

Single ended active antennas and other unbalanced antennas will, in
general,
be better with coax instead of balanced.

When the weather moderates I intend to compare some special "tightly
twisted"
audio cable with plain zip cord.

Terry

I hope you are wrong about that. No operating system is perfect but I
have never had a problem on my Mac to date. I only go to "safe" web
sites and down load "safe" software on the PC so I never have had a PC
problem either.

You do not have the option of isolating the grounds on either model,
which would ordinarily be an advantage of the voltage type of
transformer.

Beyond the Nine-Second Sound Bite

By AMY GOODMAN
SYNDICATED COLUMNIST

My goal as a journalist is to break the sound barrier. To cut through the static and bring forth voices that are not usually heard. I am not talking about a fringe minority, or the Silent Majority, but a silenced majority, increasingly restless, of people who are looking for alternative sources of information in a complex world.

With this column, I join you in the important ritual of reading the paper, of examining the news, to discern for yourself the state of the world and your place in it. I invite you to join me in going to where the silence is, as we seek out the news and newsmakers who are ignored. This column will include voices so often excluded, people whose views the media mostly ignore, issues they distort and even ridicule.

If we take television as but one example, you would hardly think there are legitimate dissenting viewpoints in this world. What is typically presented to us as news analysis is, for the most part, a small circle of pundits who know so little about so much, attempting to explain the world to us. While they may appear to differ, they are quibbling over how quickly the bombs should be dropped, not asking whether they should be dropped at all.

Unfortunately, as a result, people are increasingly turning away from the news, when news media should be providing a forum for discussion -- a forum that is honest, open, that weighs all the options and includes voices so often excluded, yet deeply affected by U.S. policy around the globe.

It is the job of the media to be the exception to the rulers, to hold those in power accountable for their decisions, to challenge and to ask the hard questions -- in short, to be the public watchdog. We in the media need to find stories of hope. We need to tell those stories that resonate with people, to tell stories of the people who live far from the rarified concerns of that passel of pundits crowding and crowing on the small screen. We need to hear local discussions cast in a global frame.

In this new media environment, what daily local and regional papers can consistently offer their readerships are the authentic voices of people in their communities dealing with a globalized world. We don't have to wait for the alternative media; we are building it right now.

Newspapers have always held a central role for my indie media colleagues in our daily newsgathering. In this column, I hope to go beyond the nine-second sound bite to bring you the whole meal, grass-roots voices in this community as well as in communities around the world.

This column will be a forum for stories from the streets, not the suites. It will engage you on the most important issues of the day, but it will engage you, I hope, with a relevance to everyday life. It will bring out the voices like those in your community, from all over the world, of people who now live in an increasingly globalized community. These unprecedented changes are affecting everyone, everywhere, in related ways. This is the tenor and direction I hope to bring to this column.

I see the media as a huge kitchen table that stretches across this country, one where we all sit around to debate and discuss the most critical issues of the day: war and peace, life and death. Anything less than that is a disservice to a democratic society.

Amy Goodman hosts the radio news program Democracy Now!

Yeah, and those GMRS radios smell really bad. What chance do you think
> the FCC will have catching someone running around with a hand held? Not
> very good.

well you'll have licensed operators turning you in along with tape
recordings, signal strength reports, freqs and repeaters you frequent along
with times. The FCC will be armed with a lot of info before they start. Then
it won't take long. After the fiasco with CB, they are a determined bunch.

2540. DX weekend Echten (The Netherlands) jan 2007

Newsgroup: rec.radio.shortwave
Date: 2007-01-31 12:01:50 UTC
From: Han <websitehan@yahoo.com>
Message-ID: <1170244910.491332.59690@m58g2000cwm.googlegroups.com>
Source record: 104489

Hello everyone

I have been on a DX weekend trying to listen to Transatlantic DX from
the Netherlands.The Antennas used were beverages.
You can listen to recordings I made on

http://home.hetnet.nl/~hanhardonk .

Look under Echten 2007.

A description of the weekend you can find at

http://ozclog.googlepages.com/echtendxpedition

With kind regards

Han Hardonk
The Netherlands

Cuzzins,I am listening to the Paul Gallo local politics radio talk shew
on Supertalk Mississippi FM 97.3 on my Reydeeo www.supertalkms.com
(look at Paul Gallo,he looks just like an Italian gangsta)
Paul mentioned www.freelaptopstoday.com It is a survey thingy and
a limited time offer and you must be 18 years old (aren't we all?) or
older.If y'all aren't skeerit of doin them thar surveys,y'all mights
check it out.I know what kind of ''laptop'' I wants.

Things sure were much different when I went to pubic (public) school
from 1946 to 1958.When I was in first grade,(Carthage,Mississippi
www.thecarthaginian.com Yes,I had a crush on my first grade teacher
lady too.I got in a fight with a boy at recess and I slugged him in his
yap.He fell back agains't a brick corner of the school.Next day,he had
been to a doctor and got some stitches in the top of his head and there
was a white bandage on his head.I was only five years old and I was
scared I almost killed that boy.

You'll likely have to come up with that on your own..

> PS Who did it before that you know of?

I didn't see any specifics on that when I went 'foraging', though
it was kind of a neat idea for a song, I thought..

> I expect it has been the subject of a few songs. I know there have
> been a couple of bands called 'Numbers Stations' over the years too.

Hrmm, my own interest was from the 'woodpecker' emissions of the
'over-the-horizon' radar being used quite some time back, and
used to spend hours with a couple of receivers and an oscillascope
trying to figure out the phase modulation present in those.

--Never thought of it as musical though..

2555. Re: Amy Goodman Launches Weekly Mao Slogans

Newsgroup: rec.radio.shortwave
Date: 2007-01-31 16:46:00 UTC
From: Guerite&#65533; <aim@their.heads>
Message-ID: <12s1ht4oh0hu3fd@corp.supernews.com>
Source record: 104554

<asswideshut@138mail.com> wrote Maoist Propaganda

"Amy Goodman is an extraordinary journalist, in the grand American tradition of Lincoln Steffens, Heywood Broun, I.F. Stone," said Howard Zinn, a Marxist historian and frequent guest on Democracy Now! "Her contribution to our culture is unique, bringing information and ideas to her listeners which they cannot see in the major media."

Zinn is correct. And Democracy Now! proudly posts his quote at its web site.

I.F. Stone was a longtime radical who devoted the last years of his life to undermining America's war against Communism in Southeast Asia. Heywood Broun ran for congress as a socialist but was later expelled from the Socialist Party because of his closeness to Communist Party members and his membership in Communist front groups. "A one-time admirer of Mussolini and his Fascist regime, [Lincoln] Steffens did as much as any American to swing the idealistic youth of the thirties toward what Max Eastman called the 'pro-Soviet parade,'" wrote Kenneth Lloyd Billingsley in his 1998 history Hollywood Party: How Communism Seduced the American Film Industry in the 1930s and 1940s. "Steffens told Marxist scholar Sidney Hook that his own motive for supporting Communism was emotional, that he had given up trying to think things out and simply 'felt' that the Communists were right." As a journalist, Steffens whitewashed atrocities committed by the Soviet Union.

Amy Goodman fits almost perfectly into the tradition of these Marxist-socialist propagandists. The difference is that Goodman has had the skill, entrepreneurial or exploitative, to make herself a millionairess.

To decipher and deconstruct the cult of Democracy Now!, note that key figures around Goodman such as radio producer Mike Burke and television producers Ana Nogueira, Elizabeth Press and John Hamilton all have backgrounds in Indymedia, a leftwing Internet movement steeped in the views of radical political cult figure Noam Chomsky. Nogueira also has written for the Chomskyite Z Magazine.

Chomsky, a linguist at the Masschusetts Institute of Technology (MIT), teaches that the United States is the successor to Nazi Germany, that the Holocaust might never have happened, that Communists are better than capitalists, and that Western democracy is fraudulent because corporations "manufacture consent" through media manipulation.

In June 2002 Democracy Now! became a tax-exempt 501(c)(3) organization independent of Pacifica Radio. It continues to air on Pacifica-owned and affiliated stations. It is satellite-uplinked via the Pacifica Satellite System, but also via the taxpayer-subsidized Public Radio Satellite System (PRSS).

"Democracy Now! is funded entirely through contributions from listeners, viewers, and foundations," says its web site. "We do not accept advertisers, donations from corporations, or donations from governments. This allows us to maintain our independence."

But serious questions have arisen about how Democracy Now! developed with the resources of Pacifica Radio and grants from the Carnegie Corporation, the Ford Foundation, J.M. Kaplan Fund and others - suddenly in 2002 became independent and the effective property of Amy Goodman without any recompense to Pacifica. This transfer included valuable assets such as trademarks, ownership of years of archived programs and interviews, affiliate station access and more.

And through a contract that remains secret, Amy Goodman is also receiving $1 million per year for a five year period that began in 2002, according to Pacifica Treasurer Jabari Zakiya, to continue doing what has become Pacifica's flagship morning news program. Goodman also is able to use a tax-exempt radio program and taxpayer-subsidized public radio satellite transponder to promote what may be her for-profit book and other lucrative activities.

> return to your avocation of clip and pasting other people's writings. Oh
and
> don't forget your tin foil hat.

Getting rich are you?

Communist Chinese online commentators recruited by various Communist state agencies are responsible for guiding Internet users toward the authority-endorsed opinions on important issues. They are referred to as the "Internet political workers," and are paid half a yuan (US$0.08) per message they write. Internet users refer to these commentators-in-disguise as "fifty-cents."

Number of Communist missiles pointed at Democratic Taiwan near 1,000

According to the intelligence that we gathered, China has completed its preparation work to use force against Taiwan in three stages. That is, to establish contingency-response combat capabilities by 2007; to build up combat capability for large-scale military engagement by 2010; and to ensure victory in a decisive battle by 2015.

It is our solemn duty and obligation to defend the peaceful status quo in the Taiwan Strait. It is China that is attempting to use military force to invade Taiwan and to change the peaceful status quo in the Taiwan Strait.

I think 10 or 20 years from now, people will remember that during my eight years as president, I have persisted and persevered in fighting against this so-called "one China" principle proposed by China, and also have refused to accept the so-called 1992 Consensus, and I have insisted on Taiwan being an independent, sovereign country and that the People's Republic of China does not have jurisdiction over Taiwan, nor does Taiwan have jurisdiction over the People's Republic of China. The two sides of the Taiwan Strait are different countries. I think history will bear witness to my devotion and my commitment to defending Taiwan.

http://edition.cnn.com/2007/WORLD/asiapcf/01/29/talkasia.chen.script/index.html

Amidst the many consumer ads endlessly flowing from the plasma screens in grocery stores across [Communist China], one stands out for its interesting message. The ad is for Hearttex (???) napkins.

It features a teacher who takes a group of preschool students to the beach. She points across out at sea and says, "On the other side of this sea is our treasured island, Taiwan." The preschoolers then take out their Hearttex napkins, dip them in the water, then ring them out on the dry sand saying, "We are going to soak the sea dry. That way, little friends in Taiwan can come over and play!"

The commercial has been running for some time now on television as well as the supermarket plasma screens. Sticking your brand on a hot political issue and sanitizing it with cute children: could this be a foolproof advertising formula for China?

The Hearttex brand is owned by Hengan International Group (????) a Hong Kong invested firm based in Jinjiang, Fujian province. Jinjiang city is on the coast of the Taiwan strait.

http://www.danwei.org/advertising_and_marketing/soaking_up_the_taiwan_strait.php

Chinese President Hu Jintao has called on all Communist Party members to take action and "purify" the internet

Hu made it clear that the Party wants to ensure its control over internet users, who are often more interested in salacious pictures, bloodthirsty games and political scandal than Marxist lessons. The party in his view must "strengthen the administration and development of our country's internet culture and raise the level of online guidance," he said. "We must [. . .] purify the internet environment," he added.

In 2006, China's internet users grew by 26 million, or 23.4 per cent, year on year, to bring the total to 137 million.

However, the vast majority of them have no access to overseas Chinese websites offering uncensored opinion and news critical of the ruling party and government. But even in heavily monitored China, news of official misdeeds and dissident opinion has been able to travel and filter through.

For this reason, Mr Hu insisted with his officials that they "must" intensify control

Unless they have changed the internal wiring since 2001, the primary
and
secondary are completly isolated. MC transformers are >NOT< a good
choice for 'high" RF field locations. I don't know eaxctly at what
point it happens,
but I ran into big problems with 2nd harmonic distortion when I added
a ground
ring around my home to my ~70' wire antenna. I also expereinced a
number
of mix porducts. 1240+770, 1240-770 1240+2(770) etc. MiniCircuit
transformers
are nice and compact,but the very small size of the ferrite core
limits the
voltage because the micro cores saturate. There are many reports of MC
transfomres getting zapped by static. I never had that problem but the
IMD was a serious issue.

Wind you own on a suitable core.

Rush tore her a new one in the past few days regarding her current stance on the war and what she had stated in years past, and he had the recordings to back it up.

The bitch just flat out lies.

And by the way, I heard all of it on WLS 890, Chicago.

The same as you hear right now - very little. Compact fluorescent "bulbs" produce virtually no noise. I have one right here in my "radio room" - and several around the house. Unless you move a radio right next to it, there is no interference.

Revisionist History - Antiwar myths about Iraq, debunked.

Iraqis can participate in three historic elections, pass the most liberal constitution in the Arab world, and form a unity government despite terrorist attacks and provocations. Yet for some critics of the president, these are minor matters. Like swallows to Capistrano, they keep returning to the same allegations--the president misled the country in order to justify the Iraq war; his administration pressured intelligence agencies to bias their judgments; Saddam Hussein turned out to be no threat since he didn't possess weapons of mass destruction; and helping democracy take root in the Middle East was a postwar rationalization. The problem with these charges is that they are false and can be shown to be so--and yet people continue to believe, and spread, them. Let me examine each in turn:

The president misled Americans to convince them to go to war. "There is no question [the Bush administration] misled the nation and led us into a quagmire in Iraq," according to Ted Kennedy. Jimmy Carter charged that on Iraq, "President Bush has not been honest with the American people." And Al Gore has said that an "abuse of the truth" characterized the administration's "march to war." These charges are themselves misleading, which explains why no independent body has found them credible. Most of the world was operating from essentially the same set of assumptions regarding Iraq's WMD capabilities. Important assumptions turned out wrong; but mistakenly relying on faulty intelligence is a world apart from lying about it.

Let's review what we know. The National Intelligence Estimate (NIE) is the intelligence community's authoritative written judgment on specific national-security issues. The 2002 NIE provided a key judgment: "Iraq has continued its [WMD] programs in defiance of U.N. resolutions and restrictions. Baghdad has chemical and biological weapons as well as missiles with ranges in excess of U.N. restrictions; if left unchecked, it probably will have a nuclear weapon during this decade."

Thanks to the bipartisan Silberman-Robb Commission, which investigated the causes of intelligence failures in the run-up to the war, we now know that the President's Daily Brief (PDB) and the Senior Executive Intelligence Brief "were, if anything, more alarmist and less nuanced than the NIE" (my emphasis). We also know that the intelligence in the PDB was not "markedly different" from that given to Congress. This helps explains why John Kerry, in voting to give the president the authority to use force, said, "I believe that a deadly arsenal of weapons of mass destruction in his hands is a threat, and a grave threat, to our security." It's why Sen. Kennedy said, "We have known for many years that Saddam Hussein is seeking and developing weapons of mass destruction." And it's why Hillary Clinton said in 2002, "In

the four years since the inspectors, intelligence reports show that Saddam Hussein has worked to rebuild his chemical and biological weapons stock, his missile delivery capability and his nuclear program."

Beyond that, intelligence agencies from around the globe believed Saddam had WMD. Even foreign governments that opposed his removal from power believed Iraq had WMD: Just a few weeks before Operation Iraqi Freedom, Wolfgang Ischinger, German ambassador to the U.S., said, "I think all of our governments believe that Iraq has produced weapons of mass destruction and that we have to assume that they continue to have weapons of mass destruction."

In addition, no serious person would justify a war based on information he knows to be false and which would be shown to be false within months after the war concluded. It is not as if the WMD stockpile question was one that wasn't going to be answered for a century to come.

The Bush administration pressured intelligence agencies to bias their judgments. Earlier this year, Mr. Gore charged that "CIA analysts who strongly disagreed with the White House . . . found themselves under pressure at work and became fearful of losing promotions and salary increases." Sen. Kennedy charged that the administration "put pressure on intelligence officers to produce the desired intelligence and analysis."

This myth is shattered by the Senate Select Committee on Intelligence's bipartisan Report on the U.S. Intelligence Community's Prewar Intelligence Assessments on Iraq. Among the findings: "The committee did not find any evidence that intelligence analysts changed their judgments as a result of political pressure, altered or produced intelligence products to conform with administration policy, or that anyone even attempted to coerce, influence or pressure analysts to do so." Silberman-Robb concluded the same, finding "no evidence of political pressure to influence the Intelligence Community's prewar assessments of Iraq's weapons programs. . . . Analysts universally asserted that in no instance did political pressure cause them to skew or alter any of their analytical judgments." What the report did find is that intelligence assessments on Iraq were "riddled with errors"; "most of the fundamental errors were made and communicated to policy makers well before the now-infamous NIE of October 2002, and were not corrected in the months between the NIE and the start of the war."

Because weapons of mass destruction stockpiles weren't found, Saddam posed no threat. Howard Dean declared Iraq "was not a danger to the United States." John Murtha asserted, "There was no threat to our national security." Max Cleland put it this way: "Iraq was no threat. We now know that. There are no weapons of mass destruction, no nuclear weapons programs." Yet while we did not find stockpiles of WMD in Iraq, what we did find was enough to alarm any sober-minded individual.

Upon his return from Iraq, weapons inspector David Kay, head of the Iraq Survey Group (ISG), told the Senate: "I actually think this may be one of those cases where [Iraq under Saddam Hussein] was even more dangerous than we thought." His statement when issuing the ISG progress report said: "We

have discovered dozens of WMD-related program activities" that were part of "deliberate concealment efforts" that should have been declared to the U.N. And, he concluded, "Saddam, at least as judged by those scientists and other insiders who worked in his military-industrial programs, had not given up his aspirations and intentions to continue to acquire weapons of mass destruction."

Among the key findings of the September 2004 report by Charles Duelfer, who succeeded Mr. Kay as ISG head, are that Saddam was pursuing an aggressive strategy to subvert the Oil for Food Program and to bring down U.N. sanctions through illicit finance and procurement schemes; and that Saddam intended to resume WMD efforts once U.N. sanctions were eliminated. According to Mr. Duelfer, "the guiding theme for WMD was to sustain the intellectual capacity achieved over so many years at such a great cost and to be in a position to produce again with as short a lead time as possible. . . . Virtually no senior Iraqi believed that Saddam had forsaken WMD forever. Evidence suggests that, as resources became available and the constraints of sanctions decayed, there was a direct expansion of activity that would have the effect of supporting future WMD reconstitution."

Beyond this, Saddam's regime was one of the most sadistic and aggressive in modern history. It started a war against Iran and used mustard gas and nerve gas. A decade later Iraq invaded Kuwait. Iraq was a massively destabilizing force in the Middle East; so long as Saddam was in power, rivers of blood were sure to follow.

Promoting democracy in the Middle East is a postwar rationalization. "The president now says that the war is really about the spread of democracy in the Middle East. This effort at after-the-fact justification was only made necessary because the primary rationale was so sadly lacking in fact," according to Nancy Pelosi.

In fact, President Bush argued for democracy taking root in Iraq before the war began. To take just one example, he said in a speech on Feb. 26, 2003: "A liberated Iraq can show the power of freedom to transform that vital region, by bringing hope and progress into the lives of millions. America's interests in security, and America's belief in liberty, both lead in the same direction: to a free and peaceful Iraq. . . . The world has a clear interest in the spread of democratic values, because stable and free nations do not breed the ideologies of murder. They encourage the peaceful pursuit of a better life. And there are hopeful signs of a desire for freedom in the Middle East. . . . A new regime in Iraq would serve as a dramatic and inspiring example of freedom for other nations in the region."

The following day the New York Times editorialized: "President Bush sketched an expansive vision last night of what he expects to accomplish by a war in Iraq. . . . The idea of turning Iraq into a model democracy in the Arab world is one some members of the administration have been discussing for a long time."

These, then, are the urban legends we must counter, else falsehoods become conventional wisdom. And what a strange world it is: For many antiwar

critics, the president is faulted for the war, and he, not the former dictator of Iraq, inspires rage. The liberator rather than the oppressor provokes hatred. It is as if we have stepped through the political looking glass, into a world turned upside down and inside out.

http://www.opinionjournal.com/editorial/feature.html?id=110008415

The analysts looked at data from old intelligence reports and concluded that the C.I.A. had overlooked or downplayed evidence of an operational relationship"

WHY?

"Feith's Democratic critics accused the counterterrorism group of providing the Administration with incorrect intelligence to buttress its case that Saddam and Al Qaeda were in league. "He was giving the Administration analysis that they wanted to hear," Senator Levin told me. "It was misleading, it was deceptive, it was based on feeble information." Feith's view is that the analysts were simply involved in alternative analysis-an idea that has become increasingly popular as Washington looks for ways to improve its ability to read intelligence."

WHY did President Bush not trust impeached Clinton's inteligencia?

The American public is still asking as to why the CIA failed to foresee and take counter measures against the attack on the Pentagon and the World Trade Centre? What was the FBI doing? Well, we have some of the answers: Clinton's administration policy, which was reinforced by the thoroughly despicable Jamie Gorelick, of setting up a 'wall' between the CIA, the FBI and local law enforcement agencies destroyed interdepartmental cooperation.

However, this does not explain why US intelligence has failed so badly in dealing with Middle Eastern terrorists. The answer lies in Congress. To be more specific, Democratic Congressmen who went out of their way to cripple America's intelligence agencies. In this endeavour they had the aid and encouragement of the Washington-based Institute of Policy Studies (IPS); an extreme leftwing organisation that has not only supported every communist regime that ever existed but every leftwing terrorist organisation, specially the PLO.

For years the IPS waged a successful campaign of vilification against America's intelligence agencies, even as it was cooperating with the KGB, Castro's DGI and other communist intelligence agencies, including East Germany's STASI. Thanks to this treasonous campaign and its policy of exposing CIA operatives, one of whom was murdered, the CIA's international network of contacts was badly compromised with foreign contacts cutting off communications from fear of being exposed and possibly murdered.

In 1975 the Center for National Securities Studies (CNSS) - an IPS front - produced Abuses of the Intelligence Agencies a brazen piece of disinformation which influenced the infamous Church and Pike committees that had been set up to investigate American intelligence agencies. This was no surprise considering that not only were KGB agents Wilfred Burchett and

Philip Agee mainly responsible for the contents of the publication but both committees, especially the Church committee, had a significant number of sympathisers and members of the IPS on their staffs.

When Carter became president in 1977 he appointed IPS sympathisers to the White House staff who were virtually given carte blanche to dismantle the America's intelligence structure, which is just what these America-haters did.

Without the activities of the IPS the 1974 Hughes-Ryan Act would never have come into existence. This pernicious piece of legislation crippled intelligence operations by guaranteeing they would be leaked to America's enemies. Thus the legislation was written with the intention of sabotaging American intelligence.

There are two common threads here: a) those who took measures to cripple intelligence gathering were all Democrats; b) they were all connected by one means or another to the pro-Soviet IPS. Opposition to the Intelligence Agents Identities Protection Act consisted entirely of hardcore Democrats like Pat Schroeder, Charles Schumer and John Conyers. The Act had been designed to protect the lives of American agents by preventing anyone from revealing their identities. Needless to say, opponents of the Act are IPS supporters. Just as one would expect, the leftwing mainstream media did not bother to ask them why they were opposed to protecting American agents.

(The ineffable anti-American Conyers is a Castro sympathiser who also supported the attempted Marxist-Leninist conquest of Central America. Needless to say, he hates Bush, defended Hussein, loves the Marxist Chavez of Venezuela and supports domestic terrorists like Peltier and Mumia.)

Because of the IPS and its congressional supporters American intelligence was put in a straitjacket that denied it the power to keep track of the Islamic terrorist network that has been formed in the US. Federal agents could not without great difficulty even attend conferences that pro-terrorist speakers address!

They could not even put these pro-terrorist groups under surveillance unless they provide the Attorney General with almost irrefutable proof that a crime, say the bombing of the World Trade Centre, is going to be committed. How this evidence was to be obtained without surveillance or infiltration was never explained by the likes of Charles Schumer, Schroeder, Conyers and the other Democrats that call themselves patriots.

And who was the driving force behind this legislation? That's right, the IPS. This is what the pro-Soviet, pro-Castro, pro-PLO Richard Barnet, one of the founders of the IPS, had to say about American intelligence: ".[it's] a criminal enterprise which must be dismantled."

However, this is what General George Washington said in 1777 about the need for intelligence gathering:

The necessity of procuring good intelligence is apparent & need not be further urged - all that remains for me to add is, that you keep the whole

matter as Secret as possible. For upon secrecy, success depends in Most Enterprises of the Kind, and for want of it, they are generally defeated, however well planned and promising a favorable issue.

But then Washington was a patriot, unlike certain other so-called Americans, including some in Congress and the US Senate.

The situation under Clinton's watch was no better. Under his stewardship the standard for the recruitment of foreign agents and informants was raised to a level so strict that John the Baptist wouldn't have passed muster. This had the intended effect of crippling the accumulation of foreign assets. I say intended because what other explanation could there be for a policy that crippled foreign intelligence gathering? Moreover, people who were influenced by the IPS were recruited by the CIA, including many from the universities Middle Eastern Studies departments. These departments are notorious for being anti-Semitic and anti-Western.

Without sound intelligence the human cost of effectively dealing with terrorism is only going to rise, making the war against terrorism bloodier than it need be.

http://www.brookesnews.com/052609cia_print.html

"George Bush lied": the leftist slander that refuses to die.

Who Is Lying About Iraq?

Among the many distortions, misrepresentations, and outright falsifications that have emerged from the debate over Iraq, one in particular stands out above all others. This is the charge that George W. Bush misled us into an immoral and/or unnecessary war in Iraq by telling a series of lies that have now been definitively exposed.

What makes this charge so special is the amazing success it has enjoyed in getting itself established as a self-evident truth even though it has been refuted and discredited over and over again by evidence and argument alike. In this it resembles nothing so much as those animated cartoon characters who, after being flattened, blown up, or pushed over a cliff, always spring back to life with their bodies perfectly intact. Perhaps, like those cartoon characters, this allegation simply cannot be killed off, no matter what.

Nevertheless, I want to take one more shot at exposing it for the lie that it itself really is. Although doing so will require going over ground that I and many others have covered before, I hope that revisiting this well-trodden terrain may also serve to refresh memories that have grown dim, to clarify thoughts that have grown confused, and to revive outrage that has grown commensurately dulled.

The main "lie" that George W. Bush is accused of telling us is that Saddam Hussein possessed an arsenal of weapons of mass destruction, or WMD as they have invariably come to be called. From this followed the subsidiary "lie" that Iraq under Saddam's regime posed a two-edged mortal threat. On the one hand, we were informed, there was a distinct (or even "imminent")

possibility that Saddam himself would use these weapons against us and/or our allies; and on the other hand, there was the still more dangerous possibility that he would supply them to terrorists like those who had already attacked us on 9/11 and to whom he was linked.

This entire scenario of purported deceit has been given a new lease on life by the indictment in late October of I. Lewis (Scooter) Libby, then chief of staff to Vice President Dick Cheney. Libby stands accused of making false statements to the FBI and of committing perjury in testifying before a grand jury that had been convened to find out who in the Bush administration had "outed" Valerie Plame, a CIA agent married to the retired ambassador Joseph C. Wilson, IV. The supposed purpose of leaking this classified information to the press was to retaliate against Wilson for having "debunked" (in his words) "the lies that led to war."

Now, as it happens, Libby was not charged with having outed Plame but only with having lied about when and from whom he first learned that she worked for the CIA. Moreover, Patrick J. Fitzgerald, the special prosecutor who brought the indictment against him, made a point of emphasizing that

[t]his indictment is not about the war. This indictment is not about the propriety of the war. And people who believe fervently in the war effort, people who oppose it, people who have mixed feelings about it should not look to this indictment for any resolution of how they feel or any vindication of how they feel.

This is simply an indictment that says, in a national-security investigation about the compromise of a CIA officer's identity that may have taken place in the context of a very heated debate over the war, whether some person-a person, Mr. Libby-lied or not.

No matter. Harry Reid, the Democratic leader in the Senate, spoke for a host of other opponents of the war in insisting that
[t]his case is bigger than the leak of classified information. It is about how the Bush White House manufactured and manipulated intelligence in order to bolster its case for the war in Iraq and to discredit anyone who dared to challenge the President
.
Yet even stipulating-which I do only for the sake of argument-that no weapons of mass destruction existed in Iraq in the period leading up to the invasion, it defies all reason to think that Bush was lying when he asserted that they did. To lie means to say something one knows to be false. But it is as close to certainty as we can get that Bush believed in the truth of what he was saying about WMD in Iraq.

How indeed could it have been otherwise? George Tenet, his own CIA director, assured him that the case was "a slam dunk." This phrase would later become notorious, but in using it, Tenet had the backing of all fifteen agencies involved in gathering intelligence for the United States. In the National Intelligence Estimate (NIE) of 2002, where their collective views were summarized, one of the conclusions offered with "high confidence" was that

Iraq is continuing, and in some areas expanding its chemical, biological, nuclear, and missile programs contrary to UN resolutions.

The intelligence agencies of Britain, Germany, Russia, China, Israel, and-yes-France all agreed with this judgment. And even Hans Blix-who headed the UN team of inspectors trying to determine whether Saddam had complied with the demands of the Security Council that he get rid of the weapons of mass destruction he was known to have had in the past-lent further credibility to the case in a report he issued only a few months before the invasion:

The discovery of a number of 122-mm chemical rocket warheads in a bunker at a storage depot 170 km southwest of Baghdad was much publicized. This was a relatively new bunker, and therefore the rockets must have been moved there in the past few years, at a time when Iraq should not have had such munitions. . . . They could also be the tip of a submerged iceberg. The discovery of a few rockets does not resolve but rather points to the issue of several thousands of chemical rockets that are unaccounted for.

Blix now claims that he was only being "cautious" here, but if, as he now also adds, the Bush administration "misled itself" in interpreting the evidence before it, he at the very least lent it a helping hand.

So, once again, did the British, the French, and the Germans, all of whom signed on in advance to Secretary of State Colin Powell's reading of the satellite photos he presented to the UN in the period leading up to the invasion. Powell himself and his chief of staff, Lawrence Wilkerson, now feel that this speech was the low point of his tenure as Secretary of State. But Wilkerson (in the process of a vicious attack on the President, the Vice President, and the Secretary of Defense for getting us into Iraq) is forced to acknowledge that the Bush administration did not lack for company in interpreting the available evidence as it did:

I can't tell you why the French, the Germans, the Brits, and us thought that most of the material, if not all of it, that we presented at the UN on 5 February 2003 was the truth. I can't. I've wrestled with it. [But] when you see a satellite photograph of all the signs of the chemical-weapons ASP-Ammunition Supply Point-with chemical weapons, and you match all those signs with your matrix on what should show a chemical ASP, and they're there, you have to conclude that it's a chemical ASP, especially when you see the next satellite photograph which shows the UN inspectors wheeling in their white vehicles with black markings on them to that same ASP, and everything is changed, everything is clean. . . . But George [Tenet] was convinced, John McLaughlin [Tenet's deputy] was convinced, that what we were presented [for Powell's UN speech] was accurate.

Going on to shoot down a widespread impression, Wilkerson informs us that even the State Department's Bureau of Intelligence and Research (INR) was convinced:

People say, well, INR dissented. That's a bunch of bull. INR dissented that the nuclear program was up and running. That's all INR dissented on. They were right there with the chems and the bios.

In explaining its dissent on Iraq's nuclear program, the INR had, as stated in the NIE of 2002, expressed doubt about
Iraq's efforts to acquire aluminum tubes [which are] central to the argument that Baghdad is reconstituting its nuclear-weapons program. . . . INR is not persuaded that the tubes in question are intended for use as centrifuge rotors . . . in Iraq's nuclear-weapons program.

But, according to Wilkerson,
The French came in in the middle of my deliberations at the CIA and said, we have just spun aluminum tubes, and by God, we did it to this RPM, et cetera, et cetera, and it was all, you know, proof positive that the aluminum tubes were not for mortar casings or artillery casings, they were for centrifuges. Otherwise, why would you have such exquisite instruments?

In short, and whether or not it included the secret heart of Hans Blix, "the consensus of the intelligence community," as Wilkerson puts it, "was overwhelming" in the period leading up to the invasion of Iraq that Saddam definitely had an arsenal of chemical and biological weapons, and that he was also in all probability well on the way to rebuilding the nuclear capability that the Israelis had damaged by bombing the Osirak reactor in 1981.

Additional confirmation of this latter point comes from Kenneth Pollack, who served in the National Security Council under Clinton. "In the late spring of 2002," Pollack has written,

I participated in a Washington meeting about Iraqi WMD. Those present included nearly twenty former inspectors from the United Nations Special Commission (UNSCOM), the force established in 1991 to oversee the elimination of WMD in Iraq. One of the senior people put a question to the group: did anyone in the room doubt that Iraq was currently operating a secret centrifuge plant? No one did. Three people added that they believed Iraq was also operating a secret calutron plant (a facility for separating uranium isotopes).

No wonder, then, that another conclusion the NIE of 2002 reached with "high confidence" was that
Iraq could make a nuclear weapon in months to a year once it acquires sufficient weapons-grade fissile material.(1)

But the consensus on which Bush relied was not born in his own administration. In fact, it was first fully formed in the Clinton administration. Here is Clinton himself, speaking in 1998:

If Saddam rejects peace and we have to use force, our purpose is clear. We want to seriously diminish the threat posed by Iraq's weapons-of-mass-destruction program.

Here is his Secretary of State Madeline Albright, also speaking in 1998:

Iraq is a long way from [the USA], but what happens there matters a great deal here. For the risk that the leaders of a rogue state will use nuclear, chemical, or biological weapons against us or our allies is the greatest security threat we face.

Here is Sandy Berger, Clinton's National Security Adviser, who chimed in at the same time with this flat-out assertion about Saddam:

He will use those weapons of mass destruction again, as he has ten times since 1983.

Finally, Clinton's Secretary of Defense, William Cohen, was so sure Saddam had stockpiles of WMD that he remained "absolutely convinced" of it even after our failure to find them in the wake of the invasion in March 2003.

Nor did leading Democrats in Congress entertain any doubts on this score. A few months after Clinton and his people made the statements I have just quoted, a group of Democratic Senators, including such liberals as Carl Levin, Tom Daschle, and John Kerry, urged the President
to take necessary actions (including, if appropriate, air and missile strikes on suspect Iraqi sites) to respond effectively to the threat posed by Iraq's refusal to end its weapons-of-mass-destruction programs.

Nancy Pelosi, the future leader of the Democrats in the House, and then a member of the House Intelligence Committee, added her voice to the chorus:

Saddam Hussein has been engaged in the development of
weapons-of-mass-destruction technology, which is a threat to countries in the region, and he has made a mockery of the weapons inspection process.

This Democratic drumbeat continued and even intensified when Bush succeeded Clinton in 2001, and it featured many who would later pretend to have been deceived by the Bush White House. In a letter to the new President, a number of Senators led by Bob Graham declared:

There is no doubt that . . . Saddam Hussein has invigorated his weapons programs. Reports indicate that biological, chemical, and nuclear programs continue apace and may be back to pre-Gulf war status. In addition, Saddam continues to redefine delivery systems and is doubtless using the cover of a licit missile program to develop longer-range missiles that will threaten the United States and our allies.

Senator Carl Levin also reaffirmed for Bush's benefit what he had told Clinton some years earlier:

Saddam Hussein is a tyrant and a threat to the peace and stability of the region. He has ignored the mandate of the United Nations, and is building weapons of mass destruction and the means of delivering them.

Senator Hillary Rodham Clinton agreed, speaking in October 2002:

In the four years since the inspectors left, intelligence reports show that Saddam Hussein has worked to rebuild his chemical- and biological-weapons stock, his missile-delivery capability, and his nuclear program. He has also given aid, comfort, and sanctuary to terrorists, including al-Qaeda members.

Senator Jay Rockefeller, vice chairman of the Senate Intelligence Committee, agreed as well:

There is unmistakable evidence that Saddam Hussein is working aggressively to develop nuclear weapons and will likely have nuclear weapons within the next five years. . . . We also should remember we have always underestimated the progress Saddam has made in development of weapons of mass destruction.

Even more striking were the sentiments of Bush's opponents in his two campaigns for the presidency. Thus Al Gore in September 2002:

We know that [Saddam] has stored secret supplies of biological and chemical weapons throughout his country.

And here is Gore again, in that same year:

Iraq's search for weapons of mass destruction has proven impossible to deter, and we should assume that it will continue for as long as Saddam is in power.

Now to John Kerry, also speaking in 2002:

I will be voting to give the President of the United States the authority to use force-if necessary-to disarm Saddam Hussein because I believe that a deadly arsenal of weapons of mass destruction in his hands is a real and grave threat to our security.

Perhaps most startling of all, given the rhetoric that they would later employ against Bush after the invasion of Iraq, are statements made by Senators Ted Kennedy and Robert Byrd, also in 2002:

Kennedy: We have known for many years that Saddam Hussein is seeking and developing weapons of mass destruction.

Byrd: The last UN weapons inspectors left Iraq in October of 1998. We are confident that Saddam Hussein retains some stockpiles of chemical and biological weapons, and that he has since embarked on a crash course to build up his chemical- and biological-warfare capabilities. Intelligence reports indicate that he is seeking nuclear weapons.(2)

Liberal politicians like these were seconded by the mainstream media, in whose columns a very different tune would later be sung. For example, throughout the last two years of the Clinton administration, editorials in the New York Times repeatedly insisted that

without further outside intervention, Iraq should be able to rebuild weapons and missile plants within a year [and] future military attacks may be required to diminish the arsenal again.

The Times was also skeptical of negotiations, pointing out that it was

hard to negotiate with a tyrant who has no intention of honoring his commitments and who sees nuclear, chemical, and biological weapons as his country's salvation.

So, too, the Washington Post, which greeted the inauguration of George W. Bush in January 2001 with the admonition that
[o]f all the booby traps left behind by the Clinton administration, none is more dangerous-or more urgent-than the situation in Iraq. Over the last

year, Mr. Clinton and his team quietly avoided dealing with, or calling attention to, the almost complete unraveling of a decade's efforts to isolate the regime of Saddam Hussein and prevent it from rebuilding its weapons of mass destruction. That leaves President Bush to confront a dismaying panorama in the Persian Gulf [where] intelligence photos . . . show the reconstruction of factories long suspected of producing chemical and biological weapons.(3)

All this should surely suffice to prove far beyond any even unreasonable doubt that Bush was telling what he believed to be the truth about Saddam's stockpile of WMD. It also disposes of the fallback charge that Bush lied by exaggerating or hyping the intelligence presented to him. Why on earth would he have done so when the intelligence itself was so compelling that it convinced everyone who had direct access to it, and when hardly anyone in the world believed that Saddam had, as he claimed, complied with the sixteen resolutions of the Security Council demanding that he get rid of his weapons of mass destruction?

Another fallback charge is that Bush, operating mainly through Cheney, somehow forced the CIA into telling him what he wanted to hear. Yet in its report of 2004, the bipartisan Senate Intelligence Committee, while criticizing the CIA for relying on what in hindsight looked like weak or faulty intelligence, stated that it

did not find any evidence that administration officials attempted to coerce, influence, or pressure analysts to change their judgments related to Iraq's weapons-of-mass-destruction capabilities.

The March 2005 report of the equally bipartisan Robb-Silberman commission, which investigated intelligence failures on Iraq, reached the same conclusion, finding

no evidence of political pressure to influence the intelligence community's pre-war assessments of Iraq's weapons programs. . . . [A]nalysts universally asserted that in no instance did political pressure cause them to skew or alter any of their analytical judgments.

Still, even many who believed that Saddam did possess WMD, and was ruthless enough to use them, accused Bush of telling a different sort of lie by characterizing the risk as "imminent." But this, too, is false: Bush consistently rejected imminence as a justification for war.(4) Thus, in the State of the Union address he delivered only three months after 9/11, Bush declared that he would "not wait on events while dangers gather" and that he would "not stand by, as peril draws closer and closer." Then, in a speech at West Point six months later, he reiterated the same point: "If we wait for threats to materialize, we will have waited too long." And as if that were not clear enough, he went out of his way in his State of the Union address in 2003 (that is, three months before the invasion), to bring up the word "imminent" itself precisely in order to repudiate it:

Some have said we must not act until the threat is imminent. Since when have terrorists and tyrants announced their intentions, politely putting us on

notice before they strike? If this threat is permitted to fully and suddenly emerge, all actions, all words, and all recriminations would come too late. Trusting in the sanity and restraint of Saddam Hussein is not a strategy, and it is not an option.

What of the related charge that it was still another "lie" to suggest, as Bush and his people did, that a connection could be traced between Saddam Hussein and the al-Qaeda terrorists who had attacked us on 9/11? This charge was also rejected by the Senate Intelligence Committee. Contrary to how its findings were summarized in the mainstream media, the committee's report explicitly concluded that al Qaeda did in fact have a cooperative, if informal, relationship with Iraqi agents working under Saddam. The report of the bipartisan 9/11 commission came to the same conclusion, as did a comparably independent British investigation conducted by Lord Butler, which pointed to "meetings . . . between senior Iraqi representatives and senior al-Qaeda operatives."(5)

Which brings us to Joseph C. Wilson, IV and what to my mind wins the palm for the most disgraceful instance of all.
The story begins with the notorious sixteen words inserted-after, be it noted, much vetting by the CIA and the State Department-into Bush's 2003 State of the Union address:

The British government has learned that Saddam Hussein recently sought significant quantities of uranium from Africa.
This is the "lie" Wilson bragged of having "debunked" after being sent by the CIA to Niger in 2002 to check out the intelligence it had received to that effect. Wilson would later angrily deny that his wife had recommended him for this mission, and would do his best to spread the impression that choosing him had been the Vice President's idea. But Nicholas Kristof of the New York Times, through whom Wilson first planted this impression, was eventually forced to admit that "Cheney apparently didn't know that Wilson had been dispatched." (By the time Kristof grudgingly issued this retraction, Wilson himself, in characteristically shameless fashion, was denying that he had ever "said the Vice President sent me or ordered me sent.") And as for his wife's supposed non-role in his mission, here is what Valerie Plame Wilson wrote in a memo to her boss at the CIA:

My husband has good relations with the PM [the prime minister of Niger] and the former minister of mines . . . , both of whom could possibly shed light on this sort of activity.

More than a year after his return, with the help of Kristof, and also Walter Pincus of the Washington Post, and then through an op-ed piece in the Times under his own name, Wilson succeeded, probably beyond his wildest dreams, in setting off a political firestorm.

In response, the White House, no doubt hoping to prevent his allegation about the sixteen words from becoming a proxy for the charge that (in Wilson 's latest iteration of it) "lies and disinformation [were] used to justify the invasion of Iraq," eventually acknowledged that the President's statement "did not rise to the level of inclusion in the State of the Union

address." As might have been expected, however, this panicky response served to make things worse rather than better. And yet it was totally unnecessary-for the maddeningly simple reason that every single one of the sixteen words at issue was true.

That is, British intelligence had assured the CIA that Saddam Hussein had tried to buy enriched uranium from the African country of Niger. Furthermore-and notwithstanding the endlessly repeated assertion that this assurance has now been discredited-Britain's independent Butler commission concluded that it was "well-founded." The relevant passage is worth quoting at length:

a. It is accepted by all parties that Iraqi officials visited Niger in 1999.
b. The British government had intelligence from several different sources indicating that this visit was for the purpose of acquiring uranium. Since uranium constitutes almost three-quarters of Niger's exports, the intelligence was credible.
c. The evidence was not conclusive that Iraq actually purchased, as opposed to having sought, uranium, and the British government did not claim this.

As if that were not enough to settle the matter, Wilson himself, far from challenging the British report when he was "debriefed" on his return from Niger (although challenging it is what he now never stops doing (6)), actually strengthened the CIA's belief in its accuracy. From the Senate Intelligence Committee report:

He [the CIA reports officer] said he judged that the most important fact in the report [by Wilson] was that Niger officials admitted that the Iraqi delegation had traveled there in 1999, and that the Niger prime minister believed the Iraqis were interested in purchasing uranium.

And again:

The report on [Wilson's] trip to Niger . . . did not change any analysts' assessments of the Iraq-Niger uranium deal. For most analysts, the information in the report lent more credibility to the original CIA reports on the uranium deal.

This passage goes on to note that the State Department's Bureau of Intelligence and Research-which (as we have already seen) did not believe that Saddam Hussein was trying to develop nuclear weapons-found support in Wilson's report for its "assessment that Niger was unlikely to be willing or able to sell uranium to Iraq." But if so, this, as the Butler report quoted above points out, would not mean that Iraq had not tried to buy it-which was the only claim made by British intelligence and then by Bush in the famous sixteen words.

The liar here, then, was not Bush but Wilson. And Wilson also lied when he told the Washington Post that he had unmasked as forgeries certain documents given to American intelligence (by whom it is not yet clear) that supposedly contained additional evidence of Saddam's efforts to buy uranium from Niger. The documents did indeed turn out to be forgeries; but, according to the Butler report,

[t]he forged documents were not available to the British government at the time its assessment was made, and so the fact of the forgery does not undermine [that assessment].(7)

More damning yet to Wilson, the Senate Intelligence Committee discovered that he had never laid eyes on the documents in question:

[Wilson] also told committee staff that he was the source of a Washington Post article . . . which said, "among the envoy's conclusions was that the documents may have been forged because 'the dates were wrong and the names were wrong.'" Committee staff asked how the former ambassador could have come to the conclusion that the "dates were wrong and the names were wrong" when he had never seen the CIA reports and had no knowledge of what names and dates were in the reports.

To top all this off, just as Cheney had nothing to do with the choice of Wilson for the mission to Niger, neither was it true that, as Wilson "confirmed" for a credulous New Republic reporter, "the CIA circulated [his] report to the Vice President's office," thereby supposedly proving that Cheney and his staff "knew the Niger story was a flatout lie." Yet-the mind reels-if Cheney had actually been briefed on Wilson's oral report to the CIA (which he was not), he would, like the CIA itself, have been more inclined to believe that Saddam had tried to buy yellowcake uranium from Niger.

So much for the author of the best-selling and much acclaimed book whose title alone-The Politics of Truth: Inside the Lies that Led to War and Betrayed My Wife's CIA Identity-has set a new record for chutzpah.

But there is worse. In his press conference on the indictment against Libby, Patrick Fitzgerald insisted that lying to federal investigators is a serious crime both because it is itself against the law and because, by sending them on endless wild-goose chases, it constitutes the even more serious crime of obstruction of justice. By those standards, Wilson-who has repeatedly made false statements about every aspect of his mission to Niger, including whose idea it was to send him and what he told the CIA upon his return; who was then shown up by the Senate Intelligence Committee as having lied about the forged documents; and whose mendacity has sent the whole country into a wild-goose chase after allegations that, the more they are refuted, the more they keep being repeated-is himself an excellent candidate for criminal prosecution.

And so long as we are hunting for liars in this area, let me suggest that we begin with the Democrats now proclaiming that they were duped, and that we then broaden out to all those who in their desperation to delegitimize the larger policy being tested in Iraq-the policy of making the Middle East safe for America by making it safe for democracy-have consistently used distortion, misrepresentation, and selective perception to vilify as immoral a bold and noble enterprise and to brand as an ignominious defeat what is proving itself more and more every day to be a victory of American arms and a vindication of American ideals.
-November 7, 2005

NORMAN PODHORETZ is the editor-at-large of COMMENTARY and the author of ten books. The most recent, The Norman Podhoretz Reader, edited by Thomas L. Jeffers, appeared in 2004. His essays on the Bush Doctrine and Iraq, including "World War IV: How It Started, What It Means, and Why We Have to Win" (September 2004) and "The War Against World War IV" (February 2005).

1 Hard as it is to believe, let alone to reconcile with his general position, Joseph C. Wilson, IV, in a speech he delivered three months after the invasion at the Education for Peace in Iraq Center, offhandedly made the following remark: "I remain of the view that we will find biological and chemical weapons and we may well find something that indicates that Saddam's regime maintained an interest in nuclear weapons."
2 Fuller versions of these and similar statements can be found at http://www.theconversationcafe.com/forums/archive/index.php/t-3134.ht.... Another source is http://www.rightwingnews.com/quotes/demsonwmds.php.
3 These and numerous other such quotations were assembled by Robert Kagan in a piece published in the Washington Post on October 25, 2005.
4 Whereas both John Edwards, later to become John Kerry's running mate in 2004, and Jay Rockefeller, the ranking Democrat on the Senate Intelligence Committee, actually did use the word in describing the threat posed by Saddam.
5 In early November, the Democrats on the Senate Intelligence Committee, who last year gave their unanimous assent to its report, were suddenly mounting a last-ditch effort to take it back on this issue (and others). But to judge from the material they had already begun leaking by November 7, when this article was going to press, the newest "Bush lied" case is as empty and dishonest as the one they themselves previously rejected.
6 Here is how he put it in a piece in the Los Angeles Times written in late October of this year to celebrate the indictment of Libby: "I knew that the statement in Bush's speech . . . was not true. I knew it was false from my own investigative trip to Africa. . . . And I knew that the White House knew it."
7 More extensive citations of the relevant passages from the Butler report can be found in postings by Daniel McKivergan at www.worldwidestandard.com. I have also drawn throughout on materials cited by the invaluable Stephen F. Hayes in the Weekly Standard.

The local Imus affiliate, that I can barely receive on AM, has their AM station now on a HD subcarrier on FM, which it turns out I can receive fine; so that's an increase in my standard of living.

I got the Sangean HDT-1 AM/FM HD radio, which is the biggest tuner I've ever seen. It's sort of interesting, and a pretty good receiver, though you get no adjustments you get to make.

Here's WJR 760 on AM in Detroit, as received in Central Ohio by and R8B, and then the HDT-1, and then back, using exactly the same antenna via a splitter, and so seeing exactly the same signal

http://rhhardin.home.mindspring.com/hdradio.ram

It's pretty impressive. That's at around 16:00, when the sun is getting low and other stations are starting to return on the same frequency.

There are, however, only 4 HD stations on AM, and only 4 on FM, and the programming fare is no better (save for Imus, my own personal taste).

I think you'd have to always have an external AM and FM antenna. If you've got $200 to blow and another receiver for serious stuff, and want to just sort of play around, this is entertaining, though.

This is true. We use them almost exclusively here. If we used incandescents our light bill would easily triple (to over $1200 a month during the summer). I notice no difference in noise level with the CFL's running. I DO notice a small change when the larger bent tube fluorescents are running, but even those are much quieter than a standard 40 watt tube.

2581. Amy Goodman : Tapestry of Manipulations Has Unraveled Into Iraq Civil War

Newsgroup: rec.radio.shortwave

My opinion Amy Goodman : Tapestry of manipulations has unraveled into Iraq civil war
My opinion Amy Goodman

"Every great work of art goes through messy phases while it is in transition. A lump of clay can become a sculpture; blobs of paint become paintings which inspire."
No, this is not Pablo Picasso speaking, but Maj. Gen. William B. Caldwell IV, spokesman for the Multi-National Force-Iraq, comparing the carnage in Iraq to a work of art in another audacious attempt to paint Iraq as anything other than a catastrophe.
The general's remarks do bring the great artist to mind. Picasso's epic painting "Guernica," named after the city in Spain, captured the brutality of the bombing of that city during another civil war, the Spanish Civil War.
The painting, almost 30 feet wide, is a globally recognized depiction and artistic condemnation of war. Picasso shows the terror on the faces of people, the frightened animals. He shows the dead, the dying, the dismembered. A tapestry reproduction of it adorns the lobby outside of the United Nations Security Council.
In February 2003, before then-U.S. Secretary of State Colin Powell gave his major push for war at the United Nations - a speech he would later call a "blot" on his record - a blue curtain was drawn across the tapestry so that the image would not be the backdrop for press statements on the coming war. Immediately, posters and banners of Picasso's "Guernica" began appearing at the anti-war demonstrations sweeping the globe.
The attempted control of imagery and propaganda, language and spin has been a high priority of the Bush administration. Yes, the Pentagon forbade photographing the flag-draped coffins of fallen soldiers. But the manipulation goes beyond the war.
President Dwight D. Eisenhower once said, "Every gun that is made, every warship launched, every rocket fired, signifies, in the final sense, a theft from those who hunger and are not fed." If Eisenhower worked for the government today, he would have to revise his statement. Recently, the Bush administration stopped using the words "hunger" or "hungry" when describing the millions of Americans who can't afford to eat. Instead of suffering from hunger, the Agriculture Department now says these people are experiencing "very low food security."
While the Bush administration has had some success in covering up the truth, it seems like reality is finally beginning to outpace its efforts.
Take, for example, Hurricane Katrina. A side effect of the Bush

administration not responding to that disaster in a timely fashion is that when the network reporters went to New Orleans, there were no troops to embed with. What we saw for one of the first times was the network correspondents reporting from the victims' perspective. Day after day, unspun, unfiltered. Bodies floated across our TV screens. I remember a young woman reporter interviewing a man whose wife's hand had just slipped out of his, as she told him to take care of their children. After telling his story, the man waded into the water in shock with his boy. The reporter started to cry. The reports galvanized the country. Could you imagine if for one week we saw those images in Iraq: babies dead on the ground, women with their legs blown off by cluster bombs, soldiers dead and dying. Americans are a compassionate people. They would say no - war is not an answer to conflict in the 21st century.

The debate now in vogue is whether Iraq is in a civil war. Sectarian violence on a mass scale is acknowledged all around: Gone are the harangues that the media are not covering the "positive stories" or the "good news" - there simply is no good news in Iraq.

The Iraqi Ministry of Health estimated 150,000 Iraqis have died since the invasion. An October medical journal article estimated the civilian death toll as somewhere near 655,000.

The U.S. invasion and occupation of Iraq has now lasted longer than the U.S. involvement in World War II. Iraqis suffered the most violent day in the entire war while Americans were celebrating Thanksgiving. Iraq, like Spain in the 1930s, is in a civil war. A civil war started by the U.S. invasion and fueled by the U.S. occupation. The shroud over the U.N.'s "Guernica" tapestry is gone. Now the only shrouds worth noting are those that wrap the victims of the daily slaughter in Iraq.

My opinion

Amy Goodman

The only good thing to ever come out of Texas Molly Ivins has passed on after a long battle with breast cancer. She was 62. She coined the nickname "Shrub" for the Idiot In Chief King Georgie II.

In a column in mid-January, Ivins urged readers to stand up against Bush's plan to send more troops to Iraq.

"We are the people who run this country. We are the deciders. And every single day, every single one of us needs to step outside and take some action to help stop this war," Ivins wrote in the Jan. 11 column. "We need people in the streets, banging pots and pans and demanding, 'Stop it, now!'"

Ivins' best-selling books included those she co-authored with Lou Dubose about Bush. One was titled "Shrub: The Short but Happy Political Life of George W. Bush" and another was "BUSHWHACKED: Life in George W. Bush's America."

"The trouble with blaming powerless people is that although it's not nearly as scary as blaming the powerful, it does miss the point," she wrote in a 1997 column. "Poor people do not shut down factories ... Poor people didn't decide to use 'contract employees' because they cost less and don't get any benefits."

So what should we call you? PINK TRASH?

2592. eBay question

Newsgroup: rec.radio.shortwave

I think it's fair to say that most people here are fairly savvy when it comes to eBay buying/selling, so let me throw out this question: What is the value of keeping a reserve price secret?

When there's a radio I'm interested in that has a reserve, I always ask the seller what that reserve is. That way I know whether or not I'd be wasting my time watching it, and it may make a difference in how much I bid. So if, for example, you see a $400-450 radio but the guy says his reserve is $800, you don't waste your time. And likewise if he says his reserve is $425, you might bid the $425 even if $375 would make you the high bidder, so that you actually get the item instead of "Reserve not met" being the result. If you know the reserve you can make the decision.

However, many sellers reply that they don't reveal their reserve. What's the point? Isn't the reserve just another way of saying "This item is up for auction to the highest bidder, but here is the least I'll take for it"? What am I missing?

Yeah, that's pretty much it. I don't understand the point of the "secret
reserve" either.

Frankly, 99% of stuff I buy on eBay - and I buy a *lot* of stuff on eBay - I
use Buy It Now. Only truly rare and/or collectable stuff is worth bidding
on. For everyday stuff - batteries, DVDs, RAM, hard drives, books, stereo
equipment - BIN is the only way to go.

A lot of AM stations in my area (East coast) are difficult to hear
because of interference by a Spanish language station.
I was told awhile ago that it was because of a high-wattage station in
Cuba that was broadcasting because the US. was broadcasting to Cuban
listeners.

Does anyone have more information, or is this just another conspiracy
theory?
Thanks.

That's OK for a horizontal wire > 10 foot off the ground but if it is a
Beverage or inverted L for instance then you would start near ground and
you could take advantage of separate grounds.

That's sad to hear. Yeah, she is one of the few good things to come out
of that evil state. I used to say - with friends like Saudi Arabia, who
needs enemies? Now I say - with friends like Saudi Arabia and Texas, who
needs enemies?

She had more balls and brains than Dubya and any of his supporters and
cronies.

2601. Re: eBay question

Newsgroup: rec.radio.shortwave

Message-ID: <X3dwh.8833$uj5.7758@newsfe07.phx>
Source record: 104600

Well according to E-Bay to be quoted below -- it gets some people in the bidding that would normally be put off by a high starting price. And protects the seller from having to sell at too low a price if they start with an attractive opening bid

Sez E-Bay

Reserve Price

Don't want to sell your item below a certain price? Set a reserve price! A reserve price is a tool sellers can use to stimulate bidding on their auction-style item while reserving the right not to sell below a price they have in mind.

Many sellers have found that too high a starting price discourages interest in their item, while an attractively low starting price makes them vulnerable to selling at an unsatisfactorily low price. A reserve price helps with this.

How does it work?

A reserve price is the lowest price at which you are willing to sell your item. If a bidder does not meet that price, you're not obligated to sell your item. You set your reserve price, as well as a starting price, when you list your item.

The reserve price is not disclosed to bidders, but they will be told that your auction has a reserve price and whether or not the reserve has been met.

All Reserve Price Auctions are subject to a Reserve Price Auction Fee that is refunded when you successfully complete your auction on eBay. If your item does not sell, this fee is not refunded.

Leave the reserve price field blank if you don't want to use a reserve price.

You may lower your reserve price after you receive bids on the item.

Restrictions: Reserve Price Auctions are not available for Multiple Item Auctions (Dutch Auctions).

I think its a dumb idea -- but maybe I don't understand all I know about auctions (:-).I never use it when selling. And as a buyer, I'm put off when I see a reserve.

Bullshit. There are tens of thousands of "everyday stuff" that can be,
and are, purchased for a fraction of the Buy It Now price. Is there
anything you aren't an AUTHORITY on asshole? Probably from TexAss.

Everybody's got their own opinion of these reserve priced auctions, and
are entitled to it. Me? If there is an unrevealed reserve, I do not bid.
Why waste my time, if the proxi bids do not go up to the reserve you
don't get the item even if your max bid is above the reserve. Stupid
system in my opinion. Anyone else noticed that the people that use it
are usually the folks that are too lazy to produce a bid generating listing?

About a week ago I bought a Lights Of America flourescent light bulb at the Wal Mart store for my bath room.I didn't pay any attention at the store to how much watts it is rated at.Turns out it is only 40 watts,not enough light for me.Next time I go to the store I think I will buy one or two that are a higher wattage rating.

So,what's in my closets? A few clothes,a few shoes,and foot lockers full of old radios and old telephones and old toys and junk and more junk.

Last night a friend of that divorced woman next door to me backed another trailer load of her stuff in her driveway.I helped them unload her stuff and take it in her house.I have never seen so many clothes in my life that she has.

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. For multi-use bands, primary usage is shown. Some stations operate outside official bands. Information is from Oct 2005 FCC rules and Jan 2006 NTIA manual, see Chapter 4 of:
http://www.ntia.doc.gov/osmhome/redbook/redbook.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area.
Telephone lines present a potential shock hazard. Do not use this antenna
for transmitting. Use at your own risk.

INTRODUCTION

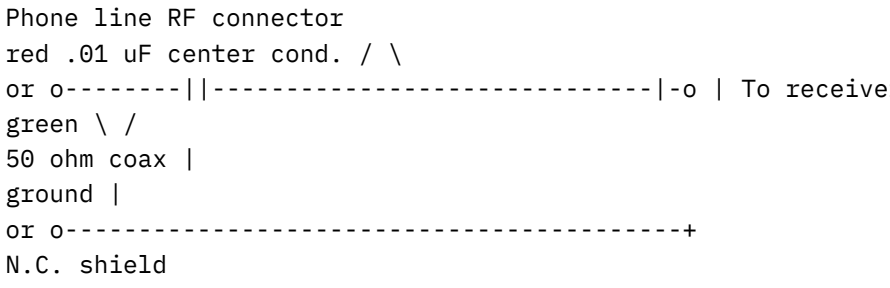
This article describes how to use a phone line as a shortwave receiving
antenna. Performance will vary depending on the kind of phone line you
have. Overhead lines usually make okay antennas, while underground lines
| usually don't. Phone lines carrying DSL service may be unsuitable because
| DSL operates over a wide spectrum. A phone line antenna will generally
pick up more power line noise than a dedicated antenna, so don't expect to
| use it for DX work. Nevertheless, I found that it outperformed the
| telescopic whip antennas built into many portables.

A reader sent in this suggestion: If you're concerned about connecting
the phone line directly to the receiver, try wrapping the phone cord
several times around the receiver's telescopic whip antenna instead.
Performance may not be as good as a direct connection, but it will
probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought
much about it because thunderstorms are rare in my area. Most phone lines
have lightning arrestors on them where they enter the house, but the
lightning arrestors may pass enough energy during a lightning strike
damage a receiver. My suggestion is to disconnect the antenna when not in
use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and
receiver. The capacitor eliminates all phone line voltages, including
| ringing, so that they will not harm the receiver. The capacitor should
| be rated 250 volts or higher.



N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

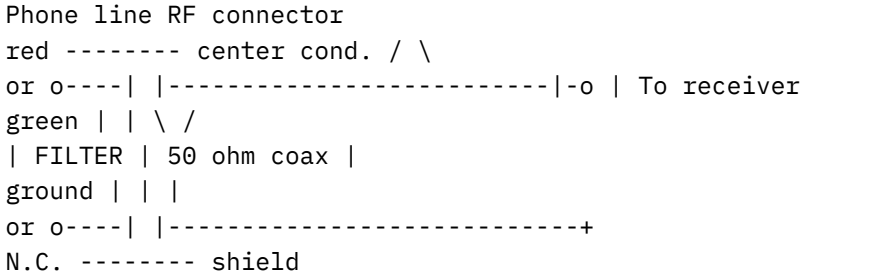
If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be
| purchased from shortwave dealers (see below for recommendations).

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

These filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:



| RECOMMENDED FILTERS
|
| If you don't want to make your own filters, the following have good
| performance, are well-built and affordable:
|
| Model 400 BCB interference filter (3.5 MHz highpass)
| http://www.iceradioproducts.com/filtersrf.html#bcb
|

| Model 420 HF lowpass filter (30 MHz lowpass)
| http://www.iceradioproducts.com/filtersrf.html#3
| (scroll down a bit to see the model 420)
|
| If you have a random-wire antenna, the following unit will provide
| impedance matching and lightning protection (connect antenna to 450-ohm
| terminal):
|
| Model 182A beverage matching unit
| http://www.iceradioproducts.com/reconly.html#Beverage Matching

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)
Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.

```
--------||---+----||-----+----||-----------
} }
{ {
} }
-------------+-----------+-----------------
```

The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB

1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

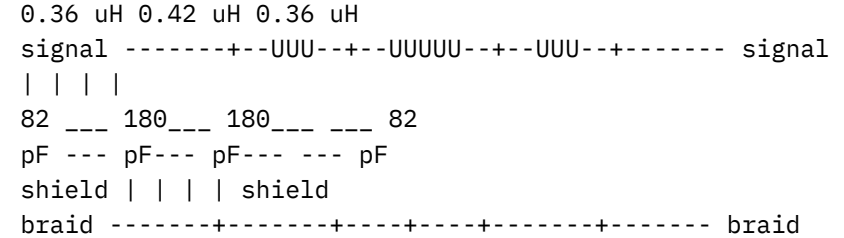
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



|
chassis ground

I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

Parts for the filters can be obtained from the following source:

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area.
Telephone lines present a potential shock hazard. Do not use this antenna
for transmitting. Use at your own risk.

INTRODUCTION

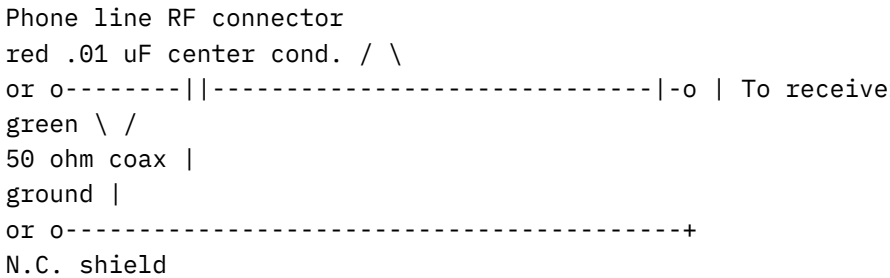
This article describes how to use a phone line as a shortwave receiving
antenna. Performance will vary depending on the kind of phone line you
have. Overhead lines usually make okay antennas, while underground lines
| usually don't. Phone lines carrying DSL service may be unsuitable because
| DSL operates over a wide spectrum. A phone line antenna will generally
pick up more power line noise than a dedicated antenna, so don't expect to
| use it for DX work. Nevertheless, I found that it outperformed the
| telescopic whip antennas built into many portables.

A reader sent in this suggestion: If you're concerned about connecting
the phone line directly to the receiver, try wrapping the phone cord
several times around the receiver's telescopic whip antenna instead.
Performance may not be as good as a direct connection, but it will
probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought
much about it because thunderstorms are rare in my area. Most phone lines
have lightning arrestors on them where they enter the house, but the
lightning arrestors may pass enough energy during a lightning strike
damage a receiver. My suggestion is to disconnect the antenna when not in
use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and
receiver. The capacitor eliminates all phone line voltages, including
| ringing, so that they will not harm the receiver. The capacitor should
| be rated 250 volts or higher.



N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

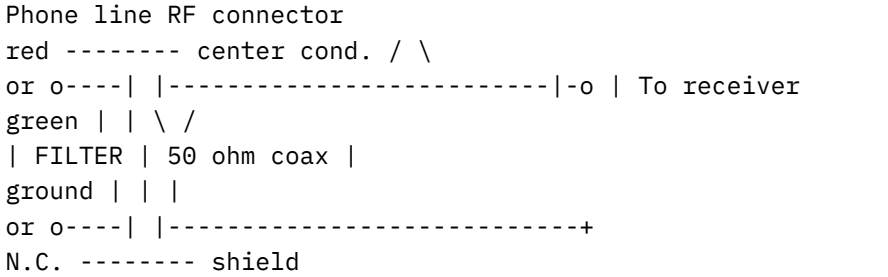
If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be
| purchased from shortwave dealers (see below for recommendations).

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

These filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:



| RECOMMENDED FILTERS
|
| If you don't want to make your own filters, the following have good
| performance, are well-built and affordable:
|
| Model 400 BCB interference filter (3.5 MHz highpass)
| http://www.iceradioproducts.com/filtersrf.html#bcb
|

| Model 420 HF lowpass filter (30 MHz lowpass)
| http://www.iceradioproducts.com/filtersrf.html#3
| (scroll down a bit to see the model 420)
|
| If you have a random-wire antenna, the following unit will provide
| impedance matching and lightning protection (connect antenna to 450-ohm
| terminal):
|
| Model 182A beverage matching unit
| http://www.iceradioproducts.com/reconly.html#Beverage Matching

There's lots of Cubans at night, when MW band signals aren't attenuated
by collisions in the lower ionosphere. (The sun puts ions there when
the sun is up; charged particles are accelerated by radio waves, and
low frequency waves move them enough to experience collisions, which
dissipates the energy; otherwise they'd just reradiate it back to
the wave and nothing would be lost, in fact this is responsible for
reflection that the wave needs to return to earth, but MW wants it
at a less dense higher altitude to avoid collisions.)

Spanish in the day is from local origins.

(see Ron Hardin's reply for more useful information)

Which frequencies? During the day, at night, both?

(I think I'm misreading your post, but do you mean many AM stations are receiving interference from **the same** Spanish-language station? Or is more than one Spanish-language station involved?) Does this interference exist every night, or is it much worse some nights than others? How far up the East Coast are you? (there's a BIG difference between Fort Pierce and Boston, as far as Cuban interference is concerned)

I suspect this will work most of the time, but on occasion (for whatever reason), folks are not bidding (income tax time?) and an item sells for so low, that it is virtually given away.

I suspect that is the reason some sellers have an outrageous shipping cost. Man is that a put off for me. Caveat Emptor sez I.

I've been thinking of making a triple dipole fed by three pairs of a CAT5 or CAT6 cable with a switcher at the receiver(s) to select any one, any pair or all three, with phase reversals on each, feeding a balanced/unbalanced antenna tuner. The three dipoles would be electrically short, concentric, mutually orthogonal - one horizontal and two as an X in the vertical plane. Might provide some directional and polarisation selectivity. Mounted high and away (with short elements it is easily away compared to a 1/2 wave dipole), it gets away from the residential noise and interference sources and the balance should be fair.

Attenuation may be excessive - here's Belden's 1300A for outdoor use:

MHz - dB/100 m
1 2.0
4 4.1
8 5.8
10 6.5 (vs 3-5 dB for RG-59/58)
16 8.2
20 9.3
25 10.4
31.25 11.7

Might have to go to an open wire line.

Check out this dp5t balanced switcher: http://cgi.ebay.com/

Boston Acoustics Receptor HD.

HD doesn't work very well but this is an exceptional analog radio.

- Fantastic selectivity, both AM and FM. Indeed, while listening to analog stations the Receptor HD is nearly immune to interference from adjacent-channel HD stations.
- Excellent sensitivity.
- Excellent audio quality.
- Shows RDS on FM.

Downsides:
- Self-interference problem on AM. Requires outdoor antenna for good AM reception.
- Not enough audio output power.
- Way too expensive!

Nah, most of us Neo-Commies do NOT back Hillary-- she's been too much
of a war-monger.
Among the netroots, her support is in single digits.

It's the pro-war and pro-corporate Democrats that DO.

Pretty expensive for ugly, Chinese-made junk, with 2" speakers - I'll stick to my $10 Sony ICF-S10MK2, thanks ! If you bought this piece of junk, you should be proud of yourself, for supporting the HD Radio Cartel, in destroying the broadcast bands with IBOC. Looks like, consumers don't give a damn, about this farce and fraud:

That poster, who wrote at the start of this thread, "The only good thing to
ever come out of Texas Molly Ivins has passed..." would seem to be a
liberal.

I am a centrist conservative, and had, until this thread, never heard of
Molly Ivins and still have no idea who she was or what she did.

Try to pin this one on someone else who at least marches in the same files
as Molly, apparently, did.

I compared "standard", no name, zip cord and radio shack 18G speaker
wire
and compared both to a variety of coax cables. One antenna was sightly
over
130' away. No significant difference was noted between the cables. I

say
"significant" because it always took a few minutes to change feedlines
and
band conditions were always in flux. the main difference was that for
balanced
antennas the zip cord or speaker cable had significantly lower QRM
from "local"
man made noise sources.

Zip cord is cheap enough to not break anyones piggy bank and if it
doesn't
work it should not be a big deal.

I only posted this because in 2005 I was very insistant that coax was
always the
best choice. 30 years of professional work in electronics, and the ~15
years I
had spent as a SWL befroe that had convinced me of somehting that I
now think
differently. My comments about balanced being better only applies for
balanced
antennas. While I have confidence in my measurement and the accuracy,
I
still have some doubts. In part due to 40 plus years of using coax.

The more turns per inch equals more loss and the loss increases faster
with frequency
for "very" twisted cables. I think anything more then a few turns per
foot will not
help noise pickup but will increase attenuation.

All I can say is to try it and see how it works for you,

Terry

Possibly, although I think it's -much- more likely that they would use a reserve; a reserve protects the seller from getting taken to the cleaners as in your example above AND does not scare off potential buyers with an outrageous shipping cost.

I'm not sure why some people have such a hard-on against reserves. Let me explain...

If you were selling something at a real, in-person swap fest, say you were asking a 100 bucks for your item. Furthermore, you would probably be willing to let them dicker you down to, oh, $95 or even $90.

However, in the back of your mind, -known only to you-, the *absolute minimum* price you would take (to keep from having to haul your item back home) is $85. This $85 price in the back of your mind is *exactly* the same as an eBay reserve; nothing sinister about it, no plot, just a "safety net" to protect you, the seller, from having to sell at a give-away price.

As to why people keep the reserve a "secret" is obvious--why tip your hand by telling the absolute, rock-bottom price you would accept? It is an auction, after all.

Who cares what the reserve is - it is irrelevant to what you should
bid. You should know the value of the radio and what you maximum
price is. If you are interested in the item just bid your maximum and
get on with life. The proxy bidding system will bid yours and
everyone elses bid up. And I guaranteee you that the the person who
wants the radio the most will win because they will be the high
bidder.

I am only one mile for the Atlantic Ocean in Hobe Sound,FL and do not seem to get transatalantic DX on theis machine. It is great in pulling in stateside DX, but it does not seem to get transatlantic DX. I have a rooftop 100ft long wire that runs down through the window, but it does not seem so to help. My Lafayette HE-10 seems to get better Am DX that this radio hooked up to the same radio. Am I doing something wrong? Even my S-38 does better on BCB DX.

Er um where did you find that bullshit?

None of the URL's you give has anything about North Korea or The Great
Playboy er um Dear Leader, Kim Jong-Il. I suspect that Kim Il Sung's
favorite talk show host appears on the Naked News.

Now, the question is what is Kim ll Sung's favorite talk show host? He
is still the President of North Korea even though he is dead.

Here's a quote from the REAL Wikipedia article, Of course, ANYONE can
write a Wikipedia article. I found a 2 sentence one about local
history and I fleshed it out to a few paragraphs. If they find you
plagarized the article or the article is too godawful they may remove
it.

[quote]
Funding

The program is funded by listeners, viewers, and foundations. The Ford
Foundation website revealed, for instance, that in 2004 a grant of
$150,000 was given by the Ford Foundation to Democracy Now Productions
Inc. "to produce, broadcast and distribute a series of radio,
television and Internet reports on the media reform movement in the
United States." At least $350,000 in grant money has been accepted by

Democracy Now! since 2001 from the Lannan Foundation that was set up by the family of former ITT board member J. Peter Lannan. Over $100,000 in grants have also been given to Democracy Now! by former Microsoft VP and Real Networks CEO Rob Glaser's Glaser Progress Foundation in recent years.

Democracy Now! does not accept donations from corporations or any government funding. The staff of the program does not accept grants from the Corporation for Public Broadcasting because they believe that funding from any government entity limits the independence of their programming.

They're on a 1941 treaty Canadian clear channel so I assume they're rather directional. Although I'm not sure who uses it west of Toronto.

http://www.pappastv.com/pressdetail.php?id=97&prYr=2007

- 73-Year-Old Heritage Radio Station Moves from Modesto to San Francisco -

- Station Begins Final Phase of Testing at Alameda County Transmitter Site
Thursday, February 1, 2007 -

- On-Air Testing Features a Tribute to ï¿½The San Francisco Soundï¿½ -

San Francisco, California - - Something old is new again, as one of Northern Californiaï¿½s pioneer radio stations, KTRB-AM 860, makes its historic Bay Area debut by bringing ï¿½The San Francisco Soundï¿½ back to the nationï¿½s fourth-largest radio market beginning this Thursday, February 1, 2007.

KTRB-AM 860 will sign-on at midnight on February 1, and beginning at 6:00 a.m. that day, the station will play continuous music reprising the late 60s and early 70s heyday of ï¿½The San Francisco Sound.ï¿½

ï¿½The San Francisco Soundï¿½ refers to rock music performed live and recorded by San Francisco-based artists and groups from the mid-1960s to the early 1970s. KTRB-AM 860 will showcase seminal Bay Area bands such as The Beau Brummels, The Syndicate of Sound, The Grateful Dead, Jefferson Airplane, Quicksilver Messenger Service, Big Brother & The Holding Company, as well as Santana, Creedence Clearwater Revival, and Journey.

KTRB-AM 860 Vice President & General Manager Jim P. Pappas said, ï¿½Our sign-on in the Bay Area is the culmination of three decades of dreaming, planning, and hard work by the best and brightest from inside and outside our company. KTRB-AM 860 represents the genesis of our companyï¿½s more than 50-year California-based broadcast tradition. It was KTRB that inspired the three Pappas Brothers to become broadcasters. We are thrilled to own and operate a 50,000 Watt blowtorch that will serve the millions of residents in San Francisco, Oakland, San Jose and the entire Bay Area, just as KTRB-AM 860 has served generations of Californians since its founding in 1933.ï¿½

KTRB-AM 860ï¿½s permanent format will commence March 1, 2007. While plans have not been disclosed, Pappas said, ï¿½KTRB will bring a fresh sound to the Bay Area to add diversity to the choices available to the public. KTRB will entertain and inform with fresh, lively content,

the likes of which the public does not now have available.ï¿½

About KTRB

KTRB-AM 860 is one of the oldest radio stations on the West Coast, having served the San Joaquin Valley and surrounding areas since the early days of the medium. Until recently, the station was licensed to Modesto, California. In 2003, the Federal Communications Commission authorized the relocation of KTRB's transmitter site to the Bay Area. On February 1, the station will return to the air licensed to San Francisco and serving the entire San Francisco-Oakland-San Jose radio market. Broadcasting on a Canadian Clear Channel frequency with 50,000 Watts of power day and night - the highest power allowed in the United States - KTRB has been engineered to cover a huge geographic area. San Francisco is the fourth-ranked radio market in the United States and the number-one AM radio market in the nation.

KTRBï¿½s storied history began in 1933, when original owners T.R. McTammany and Bill Bates (the ï¿½TRï¿½ and ï¿½Bï¿½ in KTRB) established the station as the first commercial broadcast outlet in Modesto. Through the years, KTRB has served as the launch pad for the careers of Country music notables such as The Maddox Brothers and Rose, and Chester Smith, and the station was the dominant radio voice in the San Joaquin Valley for decades. In 1973, brothers Pete, Mike, and Harry Pappas led a group of investors in purchasing KTRB from the Bates estate, and the station has remained under Pappas family ownership ever since.

KTRBï¿½s studios are located at 1700 Montgomery Street in San Francisco, overlooking The Embarcadero. KTRB is owned by Pappas Radio of California, an affiliated company of Pappas Telecasting Companies, the largest privately-held, commercial television broadcaster in the United States.

> "What do you mean there's no movie?"

Dear Count,

The Lafayette Model HE-10 is one fantastic receiver, very much under-rated today. Its sensitivity is far better than its specifications would seem to indicate and its selectivity is excellent also. Many years ago, from my former home in New Jersey, with a 100' random long wire antenna (probably similar to yours) I was able to clearly hear the then clear-channel KFI, 640 kc/s, Los Angeles, CA. Not being a medium wave DXer at that time (or even today; I used to like to listen to baseball games on the stations in the actual cities, however) I probably missed out on hearing trans-Atlantic signals on the MWs (I wasn't trying for those).

While the Panasonic RF-2200 is supposed to be an excellent receiver (and, according to RadioIntel's review, still highly prized by MW DXers), it is, nonetheless, a portable, with a portable's shortcomings (for example, circuitry has to be designed with battery consumption considered first, performance second).

But that's why many of us have more than one radio. Enjoy your HE-10. Keep it in good condition. Other than analog tuning, it will outperform any portable currently on the market (with the possible exception of the Etón E1).

Please note that I do not own a Panasonic RF-2200 or an Etón E1. The above are just my thoughts.

Best,

Joe

You're mostly correct, but it's not quite that simple.

Say you've got a radio for sale and you set a reasonable reserve to protect your investment. In other words, below a certain price you're willing to keep it and try again another day. Let's say that reserve is $200, and let's also say that it's worth that, maybe more (your reserve is reasonable).

For whatever reason (time of year, other listings of the same radio running concurrently, whatever) interest is lower than expected and no one has yet met your reserve. I come along and snipe it, and as the high bidder at $190 I have "won" the radio. However, I haven't met your reserve so no transaction takes place. Everyone's time is wasted.

BUT, if I email you and ask "What's your reserve" and you tell me, I would probably bump my bid to $200 just to guarantee that if I am the high bidder that I will actually get it. Why wouldn't you tell me your reserve? It's kind of self-defeating to keep it a secret.

I'm well familiar with the Mini-circuits site. I have used their
components in the past.

> sell at a give-away price.
>
> As to why people keep the reserve a "secret" is obvious--why tip your
> hand by telling the absolute, rock-bottom price you would accept? It
> is an auction, after all.

In your example above, your $200 wouldn't necessarily "guarantee that
you will actually win". Bidding -could- continue higher, depending on
the day of the week, the phase of the moon or whatever.

Looks like this "reserve" debate is like the Iraq war debate: no matter
what side you support, you are right!

I agree - I don't bother bidding either against a "secret" reserve. But my original question was WHY people sometimes don't reveal it.

Howdy all;
I'm wondering if anyone can tell me if there is a source anyplace for
the type of connector used in the zenith transoceanic battery packs.
I have a few of these radios, and I would like to create myself some
power packs. I read somewhere that old car radios used this same
connector, but that's no help. I searched the internet, but couldn't
even find the name or nomenclature for this connector type. There
are
a couple fellows out there making packs for resale, electronic and
otherwise, so they must either be purchasing connectors form some
outfit or making their own. Any ideas? Thanks

There were no Air America affiliates in most of the markets and regions where that happened... and even where there were, the listening level was so low (with one exception) that it would have made no statistical difference. And, in any case, those who could listen to Air America are already on the left side of the Democratic spectrum, and there were probably zero votes swung by AA.

I've read in the past about folks using the hot side of house wireing (mains). High pass filter to remove 60 cy. May be other interference too. Being an electrician and knowing more-or-less what I was doing, I and a buddy made our own maybe 15 years ago. Seems I recall using multiple capacitors in series for safety (if one fails your rig doesn't fry). Filter was enclosed in a sheilded grounded box and plugged into a wall.

Could do - I haven't costed anything - just 'pipe dreaming' for the moment. One reason for three lines is the ability to feed 3 receivers without splitters. Hmm - sounds like a 3x3 matrix - phase reversal switches on each input plus a switchable 90 degree phasing network on two inputs - that's getting a bit much!

2688. Icom R71: How well does it stack up today?

Newsgroup: rec.radio.shortwave
Date: 2007-02-02 07:50:34 UTC
From: abown68@gmail.com
Message-ID: <1170402633.973444.162080@a34g2000cwb.googlegroups.com>
Source record: 104687

Hi

I've been away from this group for a few years but I'm just getting back into SWLing again. Anyway, I have an Icom R71 with the Kiwa audio upgrade, a Kiwa LF-H4S 6KHz AM filter, an Icom FlL-33 6KHz filter and have performed the passband tuning mod from Don Moman's R71 performance manual. I also recently re-aligned it and fine-tuned its sensitivity so that its running sweetly.

The R71 was a top performer in its day but I'm just wondering how it stacks up against newer receivers like the Icom R75, AOR7030, NRD 545 or the Drake R8B. I listen solely to Worldband broadcasts and am wondering if some of the newer receivers are any better at pulling weak stations out of the mud. I do fairly well by tuning AM stations in USB or LSB mode if strong interference is a problem. I know that sync detectors improve the audio quality but are any of these receivers significantly better than the R71 at making an AM signal intelligible in the face of strong interference or when dealing with very weak signals? I don't often listen to communications so I'm only really concerned with AM.

Cheers

Andy

> reference.

Go to the following webpage and order item #1542 for $3.00. You'll receive three T-43 ferrite toroidal cores measuring 1/2-inch in diameter. You'll need one core to make the balun.

http://www.universal-radio.com/catalog/misc/amidon.html

You can get the wire for winding the balun at your local Radio Shack. It comes in an assortment of three sizes for $4.99, catalog #278-1345. Here's the online catalog page for the wire:

http://tinyurl.com/2fws6t

When you have the toroids and wire, get back to the group here and we'll tell you how to wind the balun and/or refer you to a webpage on how to do it.

I would have said the DE1102 but when I look back at the reviews it
has never really been underestimated, just forgotten.

The DE1121 really has been underestimated though, most of the initial
comments have been pretty damning but my experience has been
overwhelmingly positive.

Though I can't comment on the Lafayette, I can say that the
selectivity on the RF-2200 isn't up to the task of split frequency MW
DX. For stateside DX its fine, as the channels are all 10 kHz apart.
Maybe on a good night you may try for some of the Carribean channels
that are on the 5's, but Europeans are probably out of reach.

Big fan of this radio. Great way to introduce someone to SW,
relatively inexpensive at US$30, has major bands and brings in more
than you would expect. I really like the sound from such a little
speaker, and if I have a complaint, it's that it is analog, and unless
you have a digital receiver or SW guide around to confirm the
frequency it's difficult to know exactly where on the dial you made
the capture. Stations that show 9.550 MHz on a digital show up in the
9.700-9.900 range on the mini pe

You have not won the auction nor the radio. If you did not meet the
reserve price you won nothing other than a gold star for your effort.
>
> However, I haven't met your reserve so no
> transaction takes place. Everyone's time is wasted.

You did not have sufficient interest in the radio to put in a winning
bid. If you wanted the radio you should have bid the maximum you
would pay and let the proxy system take care of incremental bids for
you. If you feel that placing bids is a waste of your time then you
should find some other form of entertainment.

Maybe the simplicity of proxy bidding makes it difficult to
understand. Lets say you see a Sony CRF320 with an undisclosed
reserve and you would pay no more than $200.00 Simply enter $200.00.
If you are the first bidder and your bid exceeds the reserve your bid
will be taken to the reserve and will not be increased until someone
else comes along with a higher bid. If the reserve is higher than
your bid then your bid will be no more than the minimum amount or your
maximmum bid depending on whhat other bidders do. Proxy bidding is
nothing more than an efficient way to make incremental bids.

For proxy bidding to work the buyer has to know what an item is worth
and what he is willing to pay for it.

>
> BUT, if I email you and ask "What's your reserve" and you tell me, I would
> probably bump my bid to $200 just to guarantee that if I am the high bidder
> that I will actually get it. Why wouldn't you tell me your reserve? It's
> kind of self-defeating to keep it a secret.

There is nothing self defeating about a seller placing a reserve. The
seller is simply protecting his interests under the Ebay rules. And he
knows if he starts out with a low opening bid and a reserve it will
atttract a lot more bidding attention and possibly entice someone to
spend more than they would otherwise because they catch auction
fever. Proxy bidding allows the bidder to place one bid and not get
caught up in key pounding rounds of last minute sniping that will
likely result in someone paying more than they should.

If you as a potential buyer don't like bidding on reserve auctions
then I suggest that you look for ones where there is no reserve.

I have standard dipoles, one for 80 meters with 450 ohm line that goes
through a T-type mfj tuner, and one for 20 meters with coax direct
feed. I can't really hear much difference in received hash/noise or
whatever. If you go with balanced line, the Wireman has a pretty good
choice in 300 and 450 ohm varieties.

I never read them, one side or another. I don't read editorial pages,
either.

Somehow, I don't feel that I want my opinion made up based on someone else's
opinion. I read the news, not the opinion, and make up my own mind.

Which, in fact, is tonally true. KFI has approximately 3.5 times the
listening level, 6 AM to Midnight, as KCRW in the LA metro. If you add
Ventura/Oxnard, Riverside/San Bernardino and San Diego metros, the multiple
increases to 5 to 1.

KCRW ranks 25th, while KFI ranks 5th overall in LA.

Dear Andy,

Those other receivers you mention are all superior to the ICOM R71 in terms of features, usability, and, at least in the case of the R8 and, especially, the AR7030 Plus, sound quality. However, with regard to what you say you listen, I do not feel that you need to "upgrade" at all. As you say, the 'R71 was a top performer in its day and it should still perform comparably today, especially in view of the obvious care you have given to your unit.

As far as pulling signals "out of the mud," virtually all good receivers, used with a proper antenna, will perform comparably. Actually, this is a good time to compare receivers as we are at the "bottom" of the sunspot cycle and it is difficult to get good long-distance reception at this time. (For example, my AR7030 Plus is now greatly outperforming my Grundig Satellit 800, both using their own Wellbrook ALA 330S antennas; when conditions are better, the sets perform comparably.) If warranted, an upgrade to your antenna system might be considered before buying another receiver.

Should you still desire to buy another receiver, my own personal preference is for the AOR AR7030 Plus, suitably equipped and configured. This radio, especially with its audio output being sent to a good external speaker or a good audio system, is, in my opinion, superior to the other receivers you mention in terms of "listenability" over many hours at a time. Its circuitry is top-notch and virtually all parameters can be adjusted individually, regardless of the tuning mode. Some do not like a menu-driven system, as opposed to individual knobs and dials, but this operating scheme allows similar configuration, adjustments, features, and performance at a far lower price than, say, a radio such as the Ten-tec RX-340, to which it directly compares. The AR7030 Plus' sensitivity and selectivity are superb, and it offers one of the best synchronous detection circuits on the market. If ordered from a dealer in the UK in conjunction with AOR-UK, the radio can be factory-customized to your requirements.

There is a price to be paid for all of this, of course. Any new communications receiver, comparable to your 'R71, is expensive. Only you can determine if it's worth it to you or if you would be better off saving your money and sticking with what you already own, which is, as stated, a superb receiver.

Welcome back to the hobby!

Best,

Joe

I was the Alameda County staff planner for this new radio station,
whose transmitter is located south of Livermore in the rural area. 50
kW, tightly aimed west toward the central Bay Area - it is not
surprising that the signal is weak on any compass points from N
through E through S - especially during the day.

The array is designed to use skip in a limited way to get the signal
to the central Bay Area *at night*. The daytime transmitter, which is
still being politically haggled over in Sonoma County, is not yet
functional, so this one is serving double duty at this time.
Eventually it will be the nighttime outlet. Having a decidedly
slightly S of W - facing beam, it should be gloriously easy in Hawaii
at night and not too hard all the way out in Japan and Australia.

The 60's/70's music is a temporary filler until they settle on their
primary format this coming spring. As it is, right now we have no
station at all in the Bay Area that plays this music, so this may be a
worthwhile niche. You may be interested to know that the chief
engineer, John Burger, has told me that he is not keen on the new
forms of AM transmitting - being very close to this strong signal, I
am VERY happy about that.

Bruce Jensen

Things that make you think a little:

There were 39 combat related killings in Iraq in January.
In the fair city of Detroit there were 35 murders in the month of January.
That's just one American city, about as deadly as the entire war-torn
country of Iraq

When some claim that President Bush shouldn't have started this war, state
the following:
a. FDR led us into World War II.

b. Germany never attacked us ; Japan did. From 1941-1945, 450,000 lives
were lost ...
an average of 112,500 per year.

c. Truman finished that war and started one in Korea. North Korea never
attacked us ..
From 1950-1953, 55,000 lives were lost ...an average of 18,334 per year.

d John F. Kennedy started the Vietnam conflict in 1962. Vietnam never
attacked us .

e. Johnson turned Vietnam into a quagmire. From 1965-1975, 58,000 lives
were lost ..
an average of 5,800 per year.

f. Clinton went to war in Bosnia without UN or French consent. Bosnia never
attacked us. He was offered Osama bin Laden's head on a platter three
times by Sudan and did nothing. Osama has attacked us on multiple occasions.

g. In the years since terrorists attacked us, President Bush has liberated
two countries, rushed the Taliban, crippled al-Qaida, put nuclear inspectors
in Libya, Iran, and, North Korea without firing a shot, and captured a
terrorist who slaughtered 300,000 of his own people.

The Democrats are complaining about how long the war is taking.

But Wait
It took less time to take Iraq than it took Janet Reno to take the Branch
Davidian compound. That was a 51-day operation..

We've been looking for evidence for chemical weapons in Iraq for less time
than it took Hillary Clinton to find the Rose Law Firm billing records.

It took less time for the 3rd Infantry Division and the Marines to destroy
the Medina Republican Guard than it took Ted Kennedy to call the police
after his Oldsmobile sank at Chappaquiddick.

It took less time to take Iraq than it took to count the votes in Florida !!!!

Our Commander-In-Chief is doing a GREAT JOB ! The Military morale is high!

The biased media hopes we are too ignorant to realize the facts

But Wait

There's more!

JOHN GLENN (ON THE SENATE FLOOR)
Mon, 26 Jan 2004 11:13

Some people still don't understand why military personnel do what they do for a living. This exchange between Senators John Glenn and Senator Howard Metzenbaum is worth reading. Not only is it a pretty impressive impromptu speech, but it's also a good example of one man's explanation of why men and women in the armed services do what they do for a living.

This IS a typical, though sad, example of what some who have never served think of the military.

Senator Metzenbaum (speaking to Senator Glenn):
"How can you run for Senate when you've never held a real job?"

Senator Glenn (D-Ohio): "I served 23 years in the United States Marine Corps. I served through two wars. I flew 149 missions. My plane was hit by anti-aircraft fire on 12 different occasions. I was in the space program. It wasn't my checkbook, Howard; it was my life on the line. It was not a nine-to-five job, where I took time off to take the daily cash receipts to the bank."

"I ask you to go with me ..! . as I went the other day...to a veteran's hospital and look those men ... with their mangled bodies... in the eye, and tell THEM they didn't hold a job!
You go with me to the Space Program at NASA and go, as I have gone, to the widows and Orphans of Ed White, Gus Grissom and Roger Chaffee...and you look those kids in the eye and tell them that their DADS didn't hold a job.

You go with me on Memorial Day and you stand in Arlington National Cemetery, where I have more friends buried than I'd like to remember, and you watch those waving flags.

You stand there, and you think about this nation, and you tell ME that those people didn't have a job?

What about you?"

For those who don't remember. during W.W.II, Howard Metzenbaum was an attorney
representing the Communist Party in the USA. Now he's a Senator!

If you can read this, thank a teacher. If you are reading it in English thank a Veteran.

You should do just fine with the R71 as long as the audio was improved
with the Kiwa mods. Sensitivity wise and selectivity wise you have
little to gain from a newer receiver.

Frank

That's tricky... Anything that's halfway good on shortwave tends to be
reasonably well-known, the market just isn't that large.

Things that one /might/ consider underestimated, in random order:
* KA1101
* FRG-100B
* AR3030
* ATS-808(A)
* Some boatanchors
* importance of antennas
* importance of operator experience

Overrated gear is less hard to find.

I'd rather go hunting with Cheney or ride with Laura than be in a car with a
Kennedy.

2721. F-117 wreckage in Chinese embassy

Newsgroup: rec.radio.shortwave
Date: 2007-02-02 21:54:44 UTC
From: Guerite&#65533; <aim@their.heads>
Message-ID: <12s7cnu2hc07rf9@corp.supernews.com>
Source record: 104720

...
1960s tube amplifier enthusiasts will be thrilled to learn that the Yugoslavian air force attributes the shootdown of the F117A to P-12 type vacuum tube-technology Russian radars so old the U.S. considered them obsolete.

According to their account, the F117A Stealth fighter was detectable by antique radar operating at wavelengths of 2 meters-a detail that had supposedly escaped the Stealth designers, who operated on the assumption that the plane would only have to be invisible to modern centimeter and millimeter wavelength radars.

On the evening of March 27, Yugoslavia's anti-aircraft defenses detected an aircraft entering Yugoslavian airspace at a distance of 80 km. The radar was immediately shut off, since U.S. planes were armed with radar seeking missiles that would fire automatically within 20 seconds and track the signal to its source and destroy it. The Yugoslavian anti-aircraft crews had been rigorously trained to either acquire and fire on a target or turn off their radio within this 20-second window. The radar was switched on when the target was about 15 km away and a barrage of SA-2 SAM missiles were fired manually. The F117A fell to earth. Witnesses said, "It looked like a sparrow shot from the sky."
...

The two comrades in charge of the embassy's important assets were Little Wang and Little Zheng. One slept in the duty office on the fifth floor, one slept in the dormitory on the fourth floor. Little Wang pierced through the dust and smoke and by the light of the flames dsecended from the fifth floor to the fourth floor. At this time, Little Zheng emerged from the bedroom. Little Wang grabbed hold of Little Zheng and ran back upstairs. Little Zheng had already been injured and his face was flecked with blood. People who ran into them urgently asked: "Why are you going back up?" Little Wang replied: "There is something that needs doing. This is our job." They picked up four cases of national important assets and battled through smoke and pierced through flames to get downstairs. The stairwell was cut off, they stumbled down to the third floor. Ahead of time, the embassy had made various preparations for an emergency, so these four cases of important things had already been prepared. If any untoward event had occurred, they could be picked up and moved immediately. They knew, these things were more important than life.
...
...at the onset of the Kosovo conflict, a thirty or so Chinese radar and materials specialists boarded an unmarked 737 plane to assist the Yugoslavian government in using multi-location radar to detect Stealth aircraft. After the F-117A was shot down, the U.S. government learned that

China was supposed to receive F-117A wreckage for study and ordered the attack. After the embassy bombing a similar, unmarked plane returned to China and discharged its cargo of coffins. Depending on the poster, the airport at which this melancholy scene was acted out was either at Lanzhou or at Beijing's Nanyuan military airport.

According to these versions, the number of fatalities in the embassy bombing far exceeded the three officially acknowledged and reported in the media.
...
In any case, the poster declares that of the 30 so-called journalists at the embassy, at least 12 were special agents, China was extremely interested in getting its hands on F-117A wreckage, the CIA noticed Chinese "journalists" at the crash site, assumed they were spies, and the embassy bombing was ordered as a result "to destroy the physical evidence".
...
So I'm leaning towards the conclusion that the Chinese government wants to spread a certain story about the Belgrade bombing in which there was F-117A wreckage in the embassy, but is withholding this detail as "still classified".

Maybe the Chinese defense industry studied the wreckage and profited greatly from it; or got the fragments, threw millions of dollars at the problem, and was unable to do anything useful with it, which is probably not an uncommon fate in Chinese reverse-engineering boondoggles; or the spooks on the ground did get the stuff from the Yugoslavs but were unable to extract it from the burning embassy; or they never got it in the first place but, for reasons of national pride, want people to think that they did.

Whatever the real outcome, the "F-117 wreckage in the embassy" story has a lot of legs inside China.

On the other hand, the legend that China supplied significant assistance to the Yugoslavian air force in shooting down the F 117A doesn't seem to have a lot of traction.

I'm trying to identify what I heard on 14.045 mhz at 22:15z on Feb 2nd. It was radio news in CW, but it faded at 22:30z and I couldn't figure out what I was listening to. Here's a sample of what I heard:

"chile, ce. hector, ce3fzl is qrv as ce2p from panul lighthouse, arlhs073, during the month of february on the weekends. activity is on 40, 20,15 and 10 mete t4 qsl via ea5kb."

Does anyone know what this was? Thanks!

Incorrect. In order to win some (not all) auctions and also keep the
winning bid to a minimum, you must snipe. The simple-minded "just place
your highest bid and forget about it" is for amateurs or people that don't
care if they win or not.

2725. Re: Patriot radio--a great site for frequencies!

Newsgroup: rec.radio.shortwave
Date: 2007-02-02 23:29:07 UTC
From: JimC <avocat5@sbcglobal.net>
Message-ID: <7PPwh.1298$gj4.945@newssvr14.news.prodigy.net>
Source record: 104724

Shortwave radio is of interest to me because it permits me to listen to lots of different views directly and without censorship, including those of other countries. - The broadcasts on this "patriot" site seem to be either conservative, or ultraconservative, or kooks. (Actually, views like these are broadcast most of the day here in Texas, where we have lots of rednecks who like to hear their biases and prejudices rationalized and praised.) - But I'm into DXing because I wanted to hear something different for a change. - Does anyone know of some good programs of moderate, progressive, or even liberal views, broadcast in English?

Thanks,
Jim

You are giving the perfect description of someone who really doesn't
know or care to know what the value of an item is. That person wants
that radio and will snipe to get it. He is a seller dream cause he
will come in with a premptive bid 10 secods before the auction close.
Heart pounding, hands sweating he bangs the enter key at the last
possible second so that he and he alone willl get that radio and the
price is secondary.

> know or care to know what the value of an item is.

Value is subjective. It is based almost solely upon a persons desire to have the item. For instance, a specific bit of origami is made from less than a penny's worth of paper. However, if a person wants that bit of origami very badly, they may wish to bid hundreds of dollars to get it. This is that bit's value to that person, whereas to me it may not be worth as much as the paper it was made from.

"True Market Value" is an artificial construct.

You say that like it's a bad thing.

To quote you:

> That person wants that radio and will snipe to get it.

So why not? He wants it, he likes having it delivered to his front door,
it's worth it to him. If YOU want it badly enough, feel free to snipe,
bid high, whatever.

eBay prices are like water. They seek their own level. Nobody puts a gun
to anyone's head to force them to bid...

P.S.
Furthermore you say:

> so that he and he alone willl get that radio

He and he alone? You and you alone? I miss your point. There is only one
item so, yes, only -one- person will get it.

Again folks, this is an *AUCTION*, not Wal-Mart. *High* bidder wins.
What else would you expect of an auction?

Last night @ 2 AM local time, I could hear KTRB 860 kHz
with the 60's/70's Music on the Grundig Satellit 800-M using
a Quantum QX AM/MW Loop Antenna the signal was OK.

However on a short 50 Foot Random Wire Antenna the
signal was week.

This morning at about 10 AM local time, I tried KTRB again
on a BA Receptor Radio with just the built-in AM/MW Loop
Antenna and the signal was very poor; while KMPH at 840
kHz was solid. Added the TG35 Indoor AM/MW Active
Antenna using the Ferrite Rod 'Coupler' and KTRB's signal
on 860 kHz was good.

so ktrb is 'out there' for those who want to listen ~ RHF

It should be interesting to compare the KTRB 860 kHz
Radio Signals between Days and Nights when they have
their new Daytime Transmitter-Antenna System operating
in the North Bay Salt Flats {Marshes} -vice- the Transmitter
Antenna System used at Night from Up-in-the-Hills.

Hi dxAce

The ceramic 6KHz Kiwa filter is at the 455 KHz stage whereas the FL-33 is at the 9 MHz stage and is a crystal filter. The plan was to get better ultimate rejection and I'm happy with the results. The FL-33 goes in the vacant CW narrow filter slot and mod requires cutting two resistors and soldering 2 wires. One additional bonus is that in the narrow bandwidth setting you get proper passband tuning and can rock from LSB to USB without retuning.

Cheers

Andy

2737. R. St. Helena QSLs yet?

Newsgroup: rec.radio.shortwave
Date: 2007-02-03 05:40:58 UTC

Anyone heard from R. St. Helena yet since their broadcast last fall?
I know they were asking for patience when awaiting QSLs....

...but sometimes the little kid in me gets excited about these things!

:-)

Hi

Thanks for your replies everyone. My main reason for asking is that I also have a Yaesu FRG-100 with the Kiwa audio mod and and Kiwa filter modules (3.7 and 6 KHz). Running the two receivers off the same antenna, I find that the FRG-100 is slightly more sensitive to very weak signals. I know that for SSB the R71 has the advantage of the notch filter, but tuning AM signals either normally or using ECSS, I can find almost no signals on which the R71 outperforms the FRoG. The R71 does perhaps have a slight edge when dealing with nearby interference but I'd definitely say the FRoG is quieter and more sensitive.

Given the fact that the R71 is generally more highly rated, I find this surprising. I've got the Passport White Papers for both receivers and it is true that they found the FRG-100 to be more sensitive than the R71. In fact it ranks as about the most sensitive receiver they've tested but the R71 was a bit of a legend for DXing about 20 years ago so I'm surprised that the FRoG can match it most of the time and beat it some of the time. As I've realigned my receiver with the help of a technician friend, do you think my R71 is faulty? Has anyone else had these two receivers side-by-side?

Cheers

Andy

It's my understanding of how your mind works that has 'failed to take'.

Regardless of the reason, each person bids what they are willing to pay.
Period. Only I do it without waiting up till 3am and/or watching a clock
and/or giving out private details to a sniping service [where I would
STILL have to decide the maximium I am willing to pay].

I can only assume you are telling us that you bid without consideration
of how much you are willing to pay?

Please, let me direct you to some of my auctions.... Idiots welcome.

Except that if a more "well-off person" than you has already bid $600, your
snipe bid of $500 won't do you any good.

Sniping is pointless and way over-rated. High bid always wins. Whether
that high bid was placed in the first minute or last minute doesn't matter.
Bid the max amount you are willing to pay and forget about it. If someone
else is willing to pay more, it won't matter *when* he makes his bid.

Joe,

Thanks for the good words. Yes, this HE-10 has been recapped, restored, realigned and it really pulls in the stations. My antenna is on the roof, and leads straight down through the window. The long side faces NE/SW, with the ends facing N/S. With the IF Gain cranked all the way, as per the manual, it is really hot on all bands, even the top channels up to 30mc! My RF-2200 is great for stateside DX, regularly pulling in the NYC stations in the early AM/Evening with the rotating antenna. As for the battery consumption, this thing is fantastic, haven't changed the batteries in months and it just keeps delivering! Again, thanks for the replies. I remember pulling in KOMA, KFI and the Dallas all night station, the one with the nation wide trucker show, can't remember the station or the host now when I lived in OK and other places out west. Now, living on the east coast of FL, now I can't seem to get beyond the MS River!

Thanks for the reply, yes you are right, the stateside DX booms in as
does the Caribbean, but the Atlantic DX just isn't there. The radio
is like new, sharp as a tack, listen to the NYC stations regularly
here in South Florida, but nada with the Europeans, even when I took
it to the beach, just one mile away.

Well, sure you and I likely value items differently. But the point
remains that some of us know the value we assign to an item and others
do not. Those that snipe and otherwise get caught up in auction fever
bidding are more focused on getting the item than they are on what it
is worth.

>
> You say that like it's a bad thing.

If snipers are concerned more about winning the auction than they are
about the price they paid, that's ok as long as they acknowlege it.
But for them to say they have found some secret strategy for
minimizing their costs and at the same time winning auctions by
sniping is largely self-delusional.

>
> To quote you:
>
> > That person wants that radio and will snipe to get it.
>
> So why not? He wants it, he likes having it delivered to his front door,

> bid high, whatever.

And that's ok as long as the individual realizes that he is probably
spending a lot more money than he would have had he applied a little
self discipline by setting and sticking to an established price and
not getting caught up in auction fever.

>

That is a point that some of us seem to forget. It really does not
matter when you enter your bid. It only matters that yours is the

highest entered before the auction closes. Period.

>
> Again folks, this is an *AUCTION*, not Wal-Mart. *High* bidder wins.

Roadie, you don't understand how eBay works. Sniping is a valid technique
that a lot of people use. If it didn't work, people wouldn't do it and
there wouldn't be third-party services that offer to do it for you.

Simply "bid your maximum and forget about it" is for beginners, amateurs, or
people that don't really care if they win an auction. If you truly want to
win an item at the lowest possible price, you must incorporate sniping into
your total strategy. Period.

I have for sale a Dressler ARA 1500 active antenna. It is complete except for the steel hose clamps which can be purchased at a hardware store. This active antenna covers 50-2000 Mhz with a gain of 18db. I have found that it also works very well on 3-30Mhz . I have used this for a few years indoors only and is in like new condition.

The FRG-100 is a hard receiver to beat sensitivity wise, probably due
to the excellent S/N ratio. Plus the KIWA audio and filter mods
definitely help. Keep in mind that the R71 design, although state of
the art in its time, is a bit dated now and quadruple conversion has
tradeoffs. Most of its problem is probably the horrible audio
characteristics. Your comparison of the two doesn't surprise me in the
least.

Hello Group,

2 questions for you Drake R8A experts out there.

1) Is the Threshhold for the NB adjustable? If so Where ?

The NB on the R8A I have now seems to cause more distortion than the
other Drake R8B's I have owned.

2) Can I turn the volume level of the key press beep down ? How?

I know the beep can be turned off.

Thanks, Ken KG4BIG

You're right proper english would be "people who have life" not
"people who have lifes" I mean "people who have life" just sounds
right and not 100% wrong at all.

>do not. Those that snipe and otherwise get caught up in auction fever
>bidding are more focused on getting the item than they are on what it
>is worth.

It is not a truism that sniping implies "getting caught up in auction
fever". I approach eBay, as I do antiquing, as "last chance shopping."
If there is a item for bid that I want, it is because I can't just run
down to the local mall and buy it. Manufacturers seem to be in love
with change for change sake, not necessarily for true improvement.

eBay presents occasional products that I know to be truly worthwhile.
Monitoring an auction without advertising my participation as a
bidding competitor allows me to make a last minute determination to
outbid what I think any snipers out there are likely to bid in the
final moments. If bidding exceeds my limit, so what, I'll wait for
another auction. (I'm successful about 80% of the time with a sale
price I'm truly happy with.)

'Cut' numbers, used to save time:

0 T
1 A
2 N
3 D
4 U
5 W
6 R
7 I
8 G
9 M

The station is known as M8a and is from Cuba.

Hi Frank

Good to hear from you again. The Yaesu is excellent but I was still a bit worried about my R71's performance so with the service manual and help from a tech friend, I went through the whole sensitivity setting procedure again. I must have screwed up first time round. The R71 now comes close to matching the FRG-100 for sensitivity, the difference usually being negligible. You're right about the FR0G's audio being better, though.

Cheers

Andy

The bidding may exceed your limit no matter when you enter your bid.
If you know that your are willing to pay no more than $100.00 for an
item you could enter your bid at the first day or at the last minute.
It makes no difference to the outcome. Ebay will always award the
item to the highest bidder. It's that simple.

Yes, and scads of people believe and buy purportedly foolproof
programs to beat the stockmarket and invest in real estate too.
Unfortunately the person who makes the money is the guy selling the
service. As with sniping software.

Ebay works as follows:

1. Sellers offer items for sale and sometimes they have an
established reserve.

2. Buyers make offers to purchase.

3. Ebay concludes the auction at a given time and ALWAYS awards the
auction to the person with the highest bid.

The high bidder may enter his bid on the first minute of the first day
on on the last minute of the last day. It makes no difference to the
outcome. If your bid is the highest you will win. Holding a bid
until the end will have no effect on who wins because the winner is
always determined by price.

My Icom R71a takes longer and longer to come on when the power switch is pressed. The memory battery has never been replaced as far as I know. Could a dead battery be causing this problem or do I have a more serious problem?

It had a blown M9D mixer which I replaced with a MCL TAK-3H and now it works pretty well except that I get all kinds of images because the low-pass RF filter A2 is missing, part No. 791616. Anyone know where I might find an exact or equivalent replacement? I also need 3 jumpers with SMC threaded plugs on each end, or some plugs.
tnx

Pasternack has the plugs, although they are sadly not cheap. I got a TMC
receiver a couple years ago that had been demilitarized with a boltcutter
and wound up having to buy a bunch from them.

FROM SOMEONE WHOSE LIFE AND THOSE ASSIGNED TO HIM

After 26 years of service from enlisted through the officer ranks, and 9 years of living and working in the Middle East after retirement, and now returned to the states, all I can sya that this NO CODE policy has once again helped to dummy-up America.

1. Metric - no although the world uese it.

2. Spanish, SI - but everyone else, including Arabia, China and EU (where it is the official language taught in schools), is uisng and pushing english. But since these new immigrants can't cut it, we dummy up America for them - the Walmerting of America goes on and on for a buck.

3. No code - brilliant...so when the terrorists are using it, and Pactor-D in the mountains of Afghanistan and globally, we pray that some mindless computer translating every word, keying on key words we determined are critical trigger words for terrorism...no wonder we miss their movements and operations.
and when we had an emergency in the aircraft, how did we signal with the tail light - no wonder the AH-64 got shot down when his IFF failed, and couldn't figure out what to do next; and when the noise is too great or jamming or interference swamps the channel, morse code would have cut through.

But let's get to the point of all this-we Americans are either too lazy or intellectually challenged to master Morse Code. Of course we do not vote either as compared to the Iraqis or Australians or anyone else....what a bunch of losers...radio is a privilege and the code weeded out the faint hearted....we will put ourelves through idiotic college initiations, and display brainless enthusiasm and exhibitionism at sports events, but ask something demanding brains, and our knees grow weak. I'm sorry but earning the privilege, not the right, to be a radio amateur should have been selective...keying a CB or cell phone is not the same as amateur radio; and since I have done it all from the age of 14 to building weapon systems internationally, what I see is a bunch of belly-achers...likened to No Child Left Behind, this No Code is the same as vein as dealing with the Mexican border problem and Spanish language proble...after the immigrants of the 1800's, America has become a nation of whiners and slackers......

We cannot speak another language, and barely English...we cannot use the metric system used worldwide...we watch more sports than read books for knowledge and self-improvement...we become weaker, while abroad, the foreigners are becoming stronger...

I guess America has come and gone as a real and respected power...we have to use a volunteer military since we are too gutless and unpatriotic to fight for the right to live free here...we want everything for nothing, and then whine when the world's population works to get just a small piece of what we have. THe No Code is just another sign in the decline of those who made America great. Your 10-4's are parasitic, not productive...we are falling to the wayside because we want things fast and easy...we are now a culture of instant gratification seekers, and not pioneers or real Americans who used to be the leaders, the doers, the strong and the brave...we are no just another civilization on its way out of the history books.

So the next time my butt or my brothers are on the line, please stay away as things you find obnoxious or just plain taxing to your character or IQ are life saving resources overseas. And I wonder how many of you build your own equipment comparing the No Coders to the Coders...anyone can talk, but can you walk the talk???
As an engineer and former technician, I see the ignorance in our industry from program managers to the business types...we are no longer the same quality of Americans as those who went to the moon on 4K of dynamic memory.....and those using cell phones to trigger explosive devices are far superior to our own poor challenged citizens No Coding us to death...imagine not learning Morse Code, and expecting to master ARQ, CDMA,.....and crypto.....if you just want to talk, use a phone or internet...if you want to self-improve and experiment as Maxim and Tesla and Edison and Marconi and Armstrong....then let's put the real purpose and intent back into Amateur Radio...it was the well-spring for technological revolution that allowed us to lead the world in technology, and was the source of our war-time communications...go on the Internet, and I got you...go on the shortwave band, and I have to hunt for you for months to develop an intel pattern......

Why do professional societies have secret initiations as do religious ones-to weed out the rift-raft or to preserve some sense of purpose, quality and self-drive for success in their members. If everyone can be a Mason, a military officer, President of the USA, or engineer then life would be easy, fair and cheaper...well, it isn't. Driving a car demands studying and demonstrating rules...why practice hand signals..when have you used them last.....well, enough said.

When I hear or see a signal out there, and can ID it from aural or visual cues, then I thank god I learned Morse Code as the first form of mental discipline outside of school; and when I can see the flash of light in the field and know the situation of the victims, then I remember those long painful nights of banging on the key, or trying to decode the fist of a brass pounder on the airwaves.....and when I

heard the carrier's Gertrude talk to a sub far deeper and away from us on Morse Code, then I wonder why we celebrate the No Code victory. Politicians will do anything to keep there job and get your vote...but that is not leadership...or parenting.

I will still keep my code sharp and at the ready...it kept me safe and alive before...it challenged me to learn more codings...and helped me to learn more than English...and when I do dial up and hear the illusive signals of these anarchists threatening civilization as we know it, not since the times of the decline and fall of the Roman empire, and can follow there movements across time and those bands, and realize how TV is not telling the Americans the whole truth (we are losing this war because of our poor citizenship, poor propaganda, lack of physical intelligence agents, total reliance on pure technology and computers) that they are coming not because of us, but because of our religion and diametric values as infidels, then I am still the same quality cut of American that came to this land, built an empire through sweat and brains and daring, and fought global wars with the same poor equipment and intelligence but won them because of character that we lack today in each and every citizen out there in the USA.

No Code is a defeat for something intangible...and these intangibles are what distinguished Americans from the barbaric world we faced then and now...what poor people we be....when some little struggling Indian, Paki, Chinese, Arab,...can master code, an American thing, and we cannot, and build there own radios and antennas, and we cannot, and really understand the entire cycle of radio communications with a love of it for knowledge's sake, and aspire to become more than what they are now, then I wonder if America is really going to last much longer...bombs and guns and planes last for so long...and when resources vanish, the greatest being a nation's people, then we will be no more. Perhaps immigrants coming here will save a nation fat and lazy in or out of the classroom...but it will not be the very white, Christian one you and I know....but it still will be America for a new citizen still appreciative, still hungry to excel, and not afraid of a little intellectual or physical adversity to separate him or her from the common mooing mob. It is not about No Code, I am lamenting over; it is about the lack of character that is fading in our society.

Have fun while it lasts,

Joe Yuna

The day after the broadcast, I sent a substantive report, with several IRCs and a "greenstamp" to the address on the website as requested (the same St. Helena address that they advertised during the broadcast). I recalled seeing about the separate address through the Scandinavian club, but it did not occur to me that this one might be the only correct one. Oh, well - I'll wait and see.

You might be having the beginning of a problem with the ground off the power supply. The entire radio's power goes through a single wire that goes to a screw with a star washer under it. I bought one super cheap that would only turn on about 1 out of a hundred times, when it did, it came up slowly, and then it worked ok. I took it apart and there were all kinds of scorch marks around the screw. I jumped the wire over to another ground point and it fired up 100% of the time. I cleaned up the original ground point, put some contact preservative stuff on it, and also made another separate ground. It worked perfectly after that.

Usually, when the battery goes out, it's just dead, with some odd stuff on the display.

Andy - are you back in the US now? I had an Icom R70 for a while and loved it despite the weird end of band tuning thing and the ergonomics. All-in-all I would consider it one of the top "DX machines". I sent it to a friend of mine in CO to use. My present collection includes and R-5000, R72, and NRD-525.

I can't figure why my wife's name was in the header on the last two posts of mine (???)

It's interesting. CW numbers would seem contrary to
the supposed low-tech advantage of number stations.

To copy CW numbers the person receiving either has
to have the skill to copy CW (cut numbers at least) or
has to have somewhat special equipment (computer
and appropriate software).

The address to St. Helena direct is the correct one. The club only offered up their own QSL for the broadcast.

Imam leads Democrats in prayer of conversion

http://wnd.com/news/article.asp?ARTICLE_ID=54085

With heads bowed reverently, Democrats were led in prayer yesterday by a Muslim imam who essentially asked Allah to assist in converting the party members to Islam, according to a scholar and author.

Robert Spencer, director of Jihad Watch and author of "The Truth about Muhammad," took note of the invocation given at the Democratic National Committee winter meeting by Husham Al-Husainy, imam of the Karbalaa Islamic Education Center, a shiite mosque in Dearborn, Mich.

According to a transcript of the prayer, which can be seen on a video clip provided by HotAir.com, http://hotair.com/archives/2007/02/02/video-imam-prays-to-stop-oppression-and-occupation-at-dnc-meeting/

the imam said:

In the name of God the most merciful, the most compassionate. We thank you, God, to bless us among your creations. We thank you, God, to make us as a great nation. We thank you God, to send us your messages through our father Abraham and Moses and Jesus and Muhammad. Through you, God, we unite. So guide us to the right path. The path of the people you bless, not the path of the people you doom. Help us God to liberate and fill this earth with justice and peace and love and equality. And help us to stop the war and violence, and oppression and occupation. Ameen.

Spencer, in a post on his Jihad Watch website, http://www.wnd.com/redir/r.asp?http://www.jihadwatch.org/ said he found it interesting to see the Muslim leader praying, "in veiled terms to be sure, for their conversion to Islam, and, oh yes, for the destruction of Israel ("And help us to stop the war and violence, and oppression and occupation").

"Imagine if a Christian priest or minister had prayed at a DNC meeting that those attending be guided away from the path of those doomed by God," Spencer said.

He explained the imam was echoing the Fatiha, the first sura, or chapter, of the Quran and the most common prayer of Islam.

It asks Allah: "Show us the straight path, the path of those whom Thou hast favored; not the (path) of those who earn Thine anger nor of those who go astray."

The traditional Islamic understanding is that the "straight path" is Islam, Spencer points out.

On the other hand, he continued, the path of those who have earned Allah's anger are the Jews, and those who have gone astray are the Christians.

Spencer cited the classic Quranic commentator Ibn Kathir, who says:

Allah asserted that the two paths He described here are both misguided when He repeated the negation "not." These two paths are the paths of the Christians and Jews, a fact that the believer should beware of so that he avoids them.
The path of the believers is knowledge of the truth and abiding by it. In comparison, the Jews abandoned practicing the religion, while the Christians lost the true knowledge. This is why "anger" descended upon the Jews, while being described as "led astray" is more appropriate of the Christians. Those who know, but avoid implementing the truth, deserve the anger, unlike those who are ignorant. The Christians want to seek the true knowledge, but are unable to find it because they did not seek it from its proper resources. This is why they were led astray. We should also mention that both the Christians and the Jews have earned the anger and are led astray, but the anger is one of the attributes more particular of the Jews.

Allah said about the Jews, (Those (Jews) who incurred the curse of Allah and His wrath) (5:60).

The attribute that the Christians deserve most is that of being led astray, just as Allah said about them, (Who went astray before and who misled many, and strayed (themselves) from the right path) (5:77).

[snip]

I made a power pack connector using 1/8" brass tubing, a sheet of thin plastic and a PVC pipe cap. I made a pattern for the plastic sheet by adhering some tape over the radio's connector and punching the excess tape out of the holes. The pattern I made ended being a little off, but oversized holes and a little epoxy glue fixed it up. The pipe cap formed a sleeve to protect the new connector. The cap isn't absolutely necessary.

1/8" copper rivets would probably be easier to make into plugs, rather than cutting brass tubing to length.

Although I made the connector for a Hallicrafters TW-1000, the batteries are the same as the Zenith Transoceanic.

2836. Wall Wart Question

Newsgroup: rec.radio.shortwave
Date: 2007-02-04 21:01:46 UTC
From: willismat <willismat239@earthlink.net>
Message-ID: <1170622906.834580.232080@p10g2000cwp.googlegroups.com>
Source record: 104885

I have a preamp which came with a wall wart causing hum. Doing
research into past posts here brought a comparison between RS wall
warts back in 1998, saying that catalog # 273-1662 was unregulated and
caused hum while #273-1664 was regulated and did not. Having just
checked RS's website, 273-1664 is no longer available, but 273-1662 is
listed as being regulated (perhaps upgraded over time?).
The power requirement of my preamp is 12 to 13.8 VDC @ 100mA. RS
carries 3 regulated warts which would cover that:

273-1680 3-12 VDC @ 1000mA

273-1662 1.5-12 VDC @ 300 mA

273-1667 3-12 VDC @ 800 mA

Which one would be the best choice to see if I get any improvement?

Try using batteries first before unting supplies. After that, I would
suggest using a linear (big transformer) isolated supply with no ground
reference. Use a ground lifter. But make sure your antenna and radio are
grounded elsewhere first!

Don't know if any of y'all tried to find some info for me, but if so I owe you a humble apology.

I'm listening to the Super Bowl right now on AFN radio. !!**92 kickoff return**!!

I really thought they had stopped ALL sports broadcasts, but maybe this is different. They didn't broadcast the world series, so I reckon there will some complaining.

Any former FENers part of this group? AFVNers or parts thereabouts?

2848. Re: Wall Wart Question

Newsgroup: rec.radio.shortwave
Date: 2007-02-04 23:44:00 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <45C66FB8.2E01@mindspring.com>
Source record: 104897

Hum very often comes from ground loops, in which case an isolation
transformer in the audio line fixes it. Radio Shack 270-054A
about $15.

It will come in handy for other things, even if it doesn't fix this.

I need them all over, between the radios and the computer.

Batteries are not very efficient at 12v; my own wall wart solution
is a switching power supply in the basement, powering about 30
12v devices each of which came with a wall wart. If you go this
route, fuse every line at below its capacity (eg. 7a for the
main 12 line, and 1/4 and 1/2 and up amps on each individual device's
line from that). Use fast blow because slow blow gets quite hot.

Normally the internal resistance of a wall wart prevents starting
fires in the power cord, but a big 12v supply is fully capable of
turning a short into a fire without overloading itself.

If you can solder and want to add a filter to your wall warts-this is simple to build.I have built several of these & they can solve your regular hum problem unless you need a ground loop isolator.

I can't tell you which if any of the units you list will be suitable.
I have found great variability amoung units with the same part number.

One thing that might help is to take a portable SW, I use a DX398
becuase
I have one, and power up each of the units and see if any are RF
quiet.

Regulation is one aspect, but modern diodes turn off so fast that they
can cause serious RF noise.

This is one viewpoint.
<http://home.computer.net/~pritch/shortwav.htm>

I only use wall warts operation away from home or for those odd
devices
that don't operate from +12V. I tend to build LM317 step down
regulators
to allow +3V, +6V or +9V devices to operate from my 12V rail.

Some devices require AC and some are positve ground. I try to avoid
the
later if at all possible.

Good luck.

Terry

2854. Yaesu FRG-7700 receives AM, not SW

Newsgroup: rec.radio.shortwave
Date: 2007-02-05 01:25:13 UTC
From: saki <saki@ucla.edu>
Message-ID: <52nfb9F1om66hU1@mid.individual.net>
Source record: 104803

I have a Yaesu FRG-7700 shortwave receiver, bought new in 1981, with a problem. I haven't used it in about a year. It's been stored on a shelf indoors.

Turning it on again I find that alignment is fine, digital readout is fine, AM reception is fine but the radio won't hear anything above 1650 MHz except white noise. Antenna length affects volume of white noise but there are no discernible signals, nothing that causes the s-meter to move.

I've checked the attenuator in the back (DX/Local), which works normally in the AM frequency range. The front panel ATT, gain and mode are all working well. I just can't get shortwave out of it. My Icom R75 and Drake SW4-A hear signals on the same antenna used by the FRG-7700.

Is there something I should be focusing on to troubleshoot, or is this something I should have a Yaesu/ham gear repair person examine?

Any help would be much appreciated.

Try using some spray tuner cleaner on the backside of the
bandswitch.. Looks like it may not be functioning.

I understand and agree 100%. It appears we have fallen victim to an age of whiners and nay-sayers. Regretfully, the decision to drop code requirements came from the international community and most regretfully agreed to by our own government a few years ago.

FYI: There are a few here who keep reposting for their own enjoyment, the dropping of the cw requirement hoping to stir up trouble. Try to ignore the little trolls and keep the up with the code. I know I will.

Hi Frank

I'm still living near Dubai working at a college. By the way, I'm from the UK originally, not the US.

I must admit, I've been very tempted by both the R-5000 and the NRD-525. I bought an R-5000 on eBay a few years back but it was faulty. It had great audio, though. I really like the R71 and think I may spring for an R75 some time soon. Mind you, I was telling you that about 3 or 4 years ago. Still, I plan to buy one before the supplies run out as I'd like to get one brand new.

If you had to choose between the 525 and the R-5000, which would you keep?

Cheers

Andy

I'll do that, though it appears that the bandswitch is working okay. At least when I change bands the frequency readout changes too and I hear different levels of white noise.

Thanks for the suggestion!

This is an extremely hard choice. They are comparable, however, I've had three NRD-525's and two had the classic "JRC hiss" while the present one is very quiet and clean audio wise. Despite being good receivers the hiss was very annoying so I unloaded the first two. This is my first R-5000 and it's a top notch receiver. It probably has the best xtal filters of any radio I've had. I did upgrade the 6 kHz AM filter (Inrad) and added the 500 Hz CW filter. I actually prefer it over the R75 that I had only from a "feel" standpoint. The R75 was an excellent performer but I tend to be a "knobulator!" The bottom line is I think it would be a personal choice. Get both of them and let me know which one you like best! I also like the R72 I have despite the

lack of advanced features. Very solid, simple receiver similar to the FRG-100 but it doesn't have the local FM intermod problem that made my FRG-100s rather useless in this location.

It sounds like either your synthesizer is out of lock or the bandswitching diodes in the front end aren't being switched by the microcontroller. You probably have some sort of current booster chip such as a ULNXXXX or some switching transistors that switch the receiver above the 1.6MHz range. Since you are hearing different levels of white noise, I believe that your synthesizer is ok. You can determine that by connecting a frequency counter to your 1st LO injection point. If everything in this section of the circuit is ok, you will see a frequency that is above your actual displayed frequency by whatever the 1st intermediate frequency is. The key is that when you change your tuning frequency by 1MHz for instance, your 1st LO frequency will change by that amount.
I don't know if that receiver uses relay or diode switching to switch different ranges of the preselector when you tune the shortwave bands. You could actually bypass the preselector and connect an antenna wire directly to the low-pass filter that is ahead of your 1st mixer. On a final note.....is there a switch on the back panel of the 7700 that selects between long wire and 50 Ohm inputs? If so, that could be the cause. Either that switch is set to the wrong position or it is dirty.
Good luck!

I just downloaded the service manual from mods.dk. Your receiver does use switching diodes for the preselector, along with an MC14555 chip that drives them. The 50 Ohm input has a 4700pF coupling cap. The long wire input had a different path.
If you have a high speed internet connection you can register at www.mods.dk and download the manual. This will give you a good starting point.

Forget what I said in the last post.............I was looking at another schematic. The 7700 schematic itself it blurry, but you will need to take a look at that to get an idea of what is going on.

> He's a bitch monkey.

He's still selling us oil, in fact he supplies the USA with a whopping
40 PERCENT
of it's crude oil we need to make gasoline with and refine into #2
heating so you
won't freeze in the Winter.

If Chavez really wanted to hurt the USA, all he needs to do would be
to
turn off the oil spigot and you would be paying $8.00 per gallon for
unleaded
regular in about 4 weeks time.

Now I ask you, is THAT what you really want? Think carefully B4
responding.

I've often thought about getting another R-5000. I only had mine for about 3 or 4 days but it had a bad connection somewhere, which caused the sensitivity to drop intermittently, and bad key-bounce. If I could find a perfect one running off 240 V, I think I'd be sorely tempted. The audio was the best I've heard and made for really pleasant listening.

Cheers

Andy

> listening.

You need to be careful. There were two versions sold. One was 120 volt
ONLY, and the other was a multivoltage unit with a switch in the back.

My 1991 vintage U.S. purchased R5000 is 120 volt only. In my Universal
catalog from 1993, they were selling only the multivoltage unit. In 1996
when I started packing up to move here, I called Universal asking if
they could modify it to 220 volts and was asked "aren't all of them
multivoltage?".

They could not modify it, but it has lived happily here on 230 volts
connected to a 200 "watt" continuous duty transformer for the last
10 years.

The clock does not seem to be affected. I assume it is not dependent
upon the power line frequency.

Geoff.

Hi Geoff

Good point. The one I bought from eBay was 120 volt only, so I was a
bit unhappy that I spent good money on a transformer only to send the
radio back within days.

On a different note, how common is the key bounce? Do most units end
up suffering in the long term?

Cheers

Andy

You may want to ask that on the R5000 Yahoo group. IMHO far more worrisome is the dreaded dots......

This is where the display only shows a row of dots due to the main PLL (phased locked loop) becoming unlocked (going off frequency) because it was potted in a rubber compound, which over the years absorbed moisture from the air.

The repair entails unsoldering all of the parts in the PLL circuit, removing the remains of the compound from them and putting them back. In many cases, some of them have been corroded beyond use and must be replaced.

Geoff.

Count on the R71 to receive a lot of stations under some trying
conditions. Assuming you have been using the R71 for a while you
might find that you catch fewer difficult ones with a new radio just
because of a lack of familiarity.

It may not be the same problem as languages etc. If you really can't
learn morse, maybe it's really because you 'know' you can't. Do you mean
that, no matter how hard you try, you can simply can NOT learn 26
letters, 10 numbers and maybe a few basic punctuation symbols, or is it
that you do recognise them, but cannot understand them they are sent
above a certain speed (even with large gaps between letters)?

However, you do have my sympathies. I must confess that I never have
been very good at morse. I did learn it nearly 50 years ago, but I'm not
to happy with more than about 12 wpm (apart from short bursts). I have
to write down what I receive, and I suspect that if somebody simply read
out the letters of the alphabet, I would still have trouble writing
things down at more than about 15 wpm without making some mistakes.

2883. Novice Questions

Newsgroup: rec.radio.shortwave
Date: 2007-02-05 18:00:27 UTC
From: JimC <avocat5@sbcglobal.net>
Message-ID: <%gKxh.71428$qO4.60194@newssvr13.news.prodigy.net>
Source record: 104832

I recently bought a Realistic DX-160 on Ebay, hooked up about 100 feet of outside antenna and an indoor ground, and find that it picks up all sorts of signals. (Although I understand that, as an older, single conversion circuit, it's not the greatest, I do have a more modern, dual conversion set (RS DX-398, similar to the Sangean ATS-909), with digital entry and memory.) So far, I enjoy using the DX-160, with analog tuning, more than the digital set. I have several novice-level questions.-

First, I can pick up lots of stations on the 40-50 meter bands, and, in the daytime, a few on the 15 - 20 meter bands. I'm not getting many HAM or code signals or marine broadcasts. In addition to these stations, there seem to be lots of other transmissions that can be heard and that cause the S-meter to jump over, but which aren't speech or code. - Some of them sound like a rushing noise, and others are like a whine produced by an electric motor or other machine. Some are just a noticeably silent station, with no voice or message. - Can anyone suggest what these "broadcasts" are? Is there any way to filter them out? - Since there are so many of them, would this suggest that I have an antenna that is too long?

The DX-160 has bandspread tuning in addition to the main tuning, seen on a large main tuning dial, and I'm using the bandspread tuning to go back to a station that couldn't be tuned easily with the main dial. - I'm wondering how most operators use the bandspread. - Do you actually "zero" it and then scan (to the left in my case) by a given number of KH/MH, or do you just go back and forth near the station of interest?

I'm somewhat disappointed in what's available in English (or French) most of the time. I had hoped to pick up stations from Europe and England, but there don't seem to be a lot of them. - I can sometimes pick up BBC stations that I think are in England but haven't noticed anything from France. Is this typical of what others are receiving? (I'm in Texas, so probably am not in the best US location except for Cuban and Mexican stations and US religious broadcasts.) On the other hand, there seem to be lots of oriental language broadcasts. - I haven't figured out what countries most are from, but the dial on my RS DX-398 indicates some are from Japan. -

Last, I understand that sunspot activity isn't good at this time. - When will it improve?

Thanks for any suggestions.

Jim Cate

Hi Andy,

The bad connection on the R5000 may be the 6khz filter not getting a
good connection. The one I have had that problem when I got it. Took
the top off & poked around some & was able to find it.

You need to change the settings in your newsreader. Look for the
settings where you enter values for the news server, your name, e-mail
address, etc. You'll find your wife's name is in the username field.

Another possibility is that your newsreader is set up for more than
one person/account. In that case, you need to switch over to your
account. (Generally speaking, it might be a good idea to set up the
program for two users, if it isn't already. That way you and your wife
can both use it.)

I don't know Morse Code either.
There is an elderly guy whom lives a few houses down the street from me.(Herbert Brown) He was in the U.S.Army 149th Signal Corp in Europe in World War Two.Army wanted to put him in Radio.He told them they coluld put him anywhere,but not radio.He wound up in Motor Pool,working on vehicles.He has also been to General Motors school and Chrysler school.A few years ago he had multiple bypass heart surgery.He still keeps his hands dirty working on other peoples vehicles.Every once in a while I see him driving up the street in his red Ford diesel pickup truck.
Just because it is difficult for some people to learn Morse Code doesn't mean they can't excell in other things.

Source record: 104837

Telegram sent by Reichsfuerer SS Heinrich Himmler on the 2nd November 1943 to the Grand Mufti Haj Mohammed Effendi Amin Husseini:

"To the Grand Mufti: The National Socialist movement of Greater Germany has, since its inception, inscribed upon its flag the fight against the world Jewry. It has therefore followed with particular sympathy the struggle of freedom-loving Arabs, especially in Palestine, against Jewish interlopers. In the recognition of this enemy and of the common struggle against it lies the firm foundation of the natural alliance that exists between the National Socialist Greater Germany and the freedom-loving Muslims of the whole world. In this spirit I am sending you on the anniversary of the infamous Balfour declaration my hearty greetings and wishes for the successful pursuit of 'your struggle' [Jihad in Arabic, Mein Kampf in German] until the final victory.

Signed: Reichsfuehrer S.S. Heinrich Himmler"

The Islamic Mein Kampf and A Mea Culpa
By Jeremayakovka

Arriving in this morning's email from my friend, David Horowitz, was this ten-minute audiovisual primer on the Iranian and Palestinian Holocaust threat, The Islamic Mein Kampf.
http://www.terrorismawareness.org/islamic-mein-kampf/

watched it. The didactic advantage of The Islamic Mein Kampf is that it boils down into words and images the precise, deadly, and implacable intentions of radical Islam -- issuing primarily from Iran and Palestine -- vis-&#65533;-vis Israel and the United States.

Simply put: They will come for you.

This generation, it won't be a knock on the door or a round up at the train station. Instead it'll be a dirty nuke or a poisoned water supply or more hijacked airplanes or missiles over Tel Aviv.

Learn more about The Terrorism Awareness Project.
http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=26705

* * *

It's been a long intellectual road over the past ten years, and doing my part to inform people about The Islamic Mein Kampf is the latest step in what hopefully will be a long road to come -- a long road in a different direction. Here are a few words that begin to tell how I got from there to here.

Through the 1990s I dragged with me the remnants of the radical fantasies I'd imbibed while suckling, as a political babe, on the sour milk of Marxism. I actually used to believe that the imposition of a "Palestine" over all the territory of what's now Israel and Judea and Samaria was not only possible but the most humane and egalitarian resolution to the Arab-Israeli conflict. I projected my own, American creeds of fairness and republican egalitarianism onto Arabs (without ever travelling in Arab lands or undertaking to learn, seriously, its history and culture). I studied the die-hard American apologists for anti-Zionism of the 1980s and 1990s, Paul Findley and Noam Chomsky -- and of course Edward Said.

In addition I read very closely Jean Genet (left), the most celebrated French partisan of Arab "resistance" to Israel (and also a partisan of black American "resistance" to "Amerika"). In his last productive writing period he attempted to elevate the PLO to the status of ancient Greek warriors. I translated into English "Violence and Brutality," Genet's passionate but intellectually indefensible 1977 essay in which he gave his poetic blessing to terrorism. Not stopping there, I took this sentiment to its logical extreme by writing poetry modeled after Genet's -- and also East German Heiner M&#65533;ller's (above, right) -- fascination with the subject, poetry that effectively endorsed the left-wing, pro-PLO terrorism of that era.

That was my "revolutionary" intellectual project: 1) enlist my native American progressive populism to building an intellectual bridge between European terrorism of the 1970s and Palestinian terrorism of the 1990s; and thus 2) making and penetrating a breach in liberal Western letters and forcing the reading public to accomodate itself to this new radical reality. I flattered myself that I would be the avant-garde in print while groups like Hamas would be the avant-garde on the ground.

How did I accomodate myself to the murder of Israeli innocents, you might ask? Simple. I would just mull an occasional phrase from Genet ("Violence alone can put an end to the brutality of man.") or from M&#65533;ller ("When she walks through your bedrooms carrying butcher knives, you'll know the truth."), and, like some little intellectual lozenge, it would reduce the irritation. For a little while.

* * *

So, what happened? Well, I didn't exactly "go native"; I didn't, for example, join the International Solidarity Movement or start a family with a Palestinian woman (although the opportunities presented themselves). More modestly, I became conversant in a fair amount of Arab literature and film. I subscribed to Al-Jadid magazine. I bought and read the Koran. More practically, I became acquainted with certain Palestinian and pro-Palestinian activists here in America.

By coincidence (and later by cultivation) I became chummy with relatives of a former director of the Arab Film Festival, and frequently attended AFF programs. Through a mutual friend I met (and briefly worked for) the radical National Lawyers' Guild and American Arab Anti-Discrimination Committee activist Nancy Hormachea. In her practice she often represents asylum seekers fleeing persecution in Iran and Pakistan, although in her political

activism she's a staunch opponent of Israeli policies towards Palestinians. By coincidence I was a classmate of Fadia Issam Rafeedie, the author of "An 'Apologia of Radicalism'" who turned her 2000 UC Berkeley valedictorian speech into a most egregious breach of academic decorum when she served as the figurehead of a mass protest, speaking "from her heart" against the commencement speaker, then-Secretary of State Madeleine Albright.

In case you're wondering, there aren't any terribly racy tales of idealism and disillusionment to confess. I think I grew weary, then wary, then scared. I grew weary of hearing simplistic comparisons of the Israeli occupation to Nazism. Can't you do any better than that? I thought, eventually thinking, You know, you need to do better than that.... I grew wary when one of my Arab buddies "apologized" to me in the aftermath of a Hamas suicide (homicide) bombing. Do I really represent Jewry and Israel? For starters, I never, ever claimed to.... Does he represent Hamas(!)? He never claimed to, but -- beyond this being an obvious instance of a young man's conceit -- it seemed to reveal a continuity of opinion among Arabs. It seemed to reveal that possibly there was a divide (or at minimum, some vital difference) between me and them that I ought to not gloss over ... that I ought to work harder at figuring out ... that he also ought to work harder at figuring out....

Something else that added to my wariness was my attendance at a handful of sessions of a Jewish-Palestinian "dialogue group" that met in the Berkeley Hills. A derivative format of the feminist "consciousness-raising" group of the 1970s (which, as Andrea Dworkin states unapologetically in Heartbreak, was itself inspired by Communist China's Cultural Revolution) this "dialogue group" was overwhelmingly attended by Jews who endlessly professed their good intentions towards Palestinians. Typically a woman would make a somewhat strident speech about men being to blame for the escalation of violence (which, though partly true, is not the whole truth). One time a native-born Israeli woman tried to put into words her dread that Israel would no longer exist. One of the very few Palestinian attendees would affirm the need to understand how hard life under occupation was, and then make a pitch for the rest of us to purchase Palestinian olive oil. No one, however, (including me) dared ask perhaps the most pertinent question, How come so few Palestinians attended the "dialogue group"? The answer, as a Palestinian confidant told me, is that nearly all Palestinians she knew -- for the most part the secular Palestinian Left, the ostensible "partners in peace" -- nearly all of them despise such "dialogue groups." The "dialogue groups" don't accomplish anything. They're much ado about nothing. Or rather, they're very little ado about a whole hell of a lot.

What demonstrated definitively where my anti-Zionist, pro-Palestinian sympathy was leading was a telephone conversation I had with Dr. Mazin Qumsiyeh (right). Shortly after he founded Al-Awda, "The Palestinian Right to Return Coalition," I contacted him to suggest offering some outside support to his effort to secure for the surviving Palestinian refugees of 1948 and all their living descendants the right to patriate within the State of Israel. After confiding to Qumsiyeh my idealistic hope for a "secular, democratic Palestine" he in turn confided that indeed this one-state, not a

two-state, solution was his ultimate aim. Here was a meeting of minds I had long hoped for, but it also served as a real (albeit puny) "little drummer girl" moment. There, clear as a bell, was the looking glass. However, I decided not to go through it, and shied away from any further involvement or contact with Al-Awda.

* * *

Most of what I just described happened before 9/11.

Precisely how that day added to the mix I'm not going to get into in this post. By way of beginning to build an intellectual bridge, however, from Palestinian terrorism of the 1990s to neoconservative counter-jihadism of the 21st Century, here are select readings that have made a difference.

In alphabetical order (and, for that matter, in no particular political order):

Berman, Paul. Terror and Liberalism.
Hanson, Victor. An Autumn of War: What America Learned from September 11 and the War on Terrorism.
Hitchens, Christopher. Love, Poverty, and War.
Horowitz, David. Unholy Alliance.
Nafisi, Azar. Reading Lolita in Tehran.
Rashid, Ahmed. Taliban.
Scheuer, Mark. Imperial Hubris.
Steyn, Mark. America Alone.
Wright, Lawrence. The Looming Tower.

* * *

So here we are.

If you're already informed on the Iranian and Palestinian threat, then most of what's presented in The Islamic Mein Kampf will already be familiar. No sweat. Please then just take a minute and forward The Islamic Mein Kampf to all your contacts.

And if you believe that Iran, Palestine, and Islamic war against the West are not real, imminent threats, then I hope you watch The Islamic Mein Kampf. Watch it, consider it, and pursue its implications to their logical and moral ends.

May it bring you into a Vast, Classically Liberal Consensus -- which, by dispensing once and for all with left-wing apologies for terrorist tactics and terrorist ideologies -- is the only way the West will ever thwart Palestinian and, as Alexandra reminds, Iranian genocidal designs.

When Ronald Reagan quipped, "We begin bombing in five minutes," he was joking. Ahmedinejad, Nasrallah, Haniyeh -- they're not joking.

Good advice. I've cleaned some but not all. Certainly won't hurt, in any
case, even if the switch appears to be working. Thanks!

I recently bought a Realistic DX-160 on Ebay, hooked up about 100 feet of outside antenna and an indoor ground, and find that it picks up all sorts of signals. (Although I understand that, as an older, single conversion circuit, it's not the greatest, I do have a more modern, dual conversion set (RS DX-398, similar to the Sangean ATS-909), with digital entry and memory.) So far, I enjoy using the DX-160, with analog tuning, more than the digital set. I have several novice-level questions.-

First, I can pick up lots of stations on the 40-50 meter bands, and, in the daytime, a few on the 15 - 20 meter bands. I'm not getting many HAM or code signals or marine broadcasts. In addition to these stations, there seem to be lots of other transmissions that can be heard and that cause the S-meter to jump over, but which aren't speech or code. - Some of them sound like a rushing noise, and others are like a whine produced by an electric motor or other machine. Some are just a noticeably silent station, with no voice or message. - Can anyone suggest what these "broadcasts" are? Is there any way to filter them out? - Since there are so many of them, would this suggest that I have an antenna that is too long?

The DX-160 has bandspread tuning in addition to the main tuning, seen on a large main tuning dial, and I'm using the bandspread tuning to go back to a station that couldn't be tuned easily with the main dial. - I'm wondering how most operators use the bandspread. - Do you actually "zero" it and then scan (to the left in my case) by a given number of KH/MH, or do you just go back and forth near the station of interest?

I'm somewhat disappointed in what's available in English (or French) most of the time. I had hoped to pick up stations from Europe and England, but there don't seem to be a lot of them. - I can sometimes pick up BBC stations that I think are in England but haven't noticed much of anything from France. Is this typical of what others are receiving? (I'm in Texas, so probably am not in the best US location except for Cuban and Mexican stations and US religious broadcasts.) On the other hand, there seem to be lots of oriental language broadcasts. - I haven't figured out what countries most are from, but the dial on my RS DX-398 indicates some are from Japan. -

Last, I understand that sunspot activity isn't good at this time. - When will it improve?

Thanks for any suggestions.

Jim, quickly reading it through, it sounds as if some of the signals you
are receiving are SSB, and you don't have the BFO switched on.
I don't know the RDX-160 at all, but I suggest you do a Google on
'Realistic DX-160'. There are lots of results - in particular this one:

China's New Regulation for TV Shows

CHINA-Recently, the communist regime requested all major TV station's satellite channels to obtain preauthorization of any TV series scheduled to be shown during peak viewing hours.

Wang Weiping, the deputy head of the Teleplay Division of the State Administration of Radio Film and Television (SARFT), disclosed the above requirement in a meeting held on January 20. Wang said the restriction would take effect in February 2007 and would last at least eight months. Wang stated that it was a measure taken to improve program quality.

He also remarked that to go along with this request, the SARFT has set up a four-tier system of censorship:

1. All provincial TV stations must submit the programs that are going to be shown to the Provincial Administration of Radio Film and Television one month in advance of the air date.

2. The Provincial Administration of Radio Film and Television would then submit the shows to the Provincial Propaganda Department.

3. The Provincial Propaganda Department would censor the shows as necessary, and then submit them to SARFT.

4. Finally, SARFT would submit the programs to the Literature and Arts Bureau of the Propaganda Department of the CCP.

The TV shows are only allowed to be shown after receiving approval at all four levels.

Before the introduction of this regulation, SARFT had issued the "Notification on Further Controlling of the Censoring and Broadcasting Management of Cartoons" in February 2006. Starting on September 1, 2006, all channels at every level of domestic TV station were forbidden to play, introduce, or advertise cartoons produced outside of mainland China during the hours of 17:00 to 20:00 h every day. This occurred after some communist propaganda shows were rebroadcast with soundtracks that had been replaced with humorous content.

Sima Tai, an American current affairs commentator, said China's film and TV market has become a total dictatorship under the control of the CCP. Any film, considered to be even slightly suspect, would be banned. The authorities' repeated orders show that their regulations are not being followed.

Thanks for the suggestions. - I don't think the signals are SSB, since
I tried listening to them with BFO switched off and on. I don't see much
information re the DX-160 on the anoraknation site except offers of
copies of the owners manual and service manual, which I had previously
downloaded. - I'll search further re the DX-160 with Google and DejaVu.

Jim

AMAZING Feat Ben

Now I am going to haft'a read some Allan Stern and other stuff on what
to to with these data

I presume they transmit a 3-letter code at the stated frequency?

I dunno if my RX 320 will go way down there

Thanks!

Andy - the R-5000 I have has "mild" key bounce which is not a problem if you just hit the key solidly and don't hold you finger on it. I don't find it much of an issue. This particular radio must a have lived in a damper part of the country because there is light corrosion on many of the internal pcb screws and some of the metal parts. If any hydroscopic materials had moisture in them when I got the radio they have long since dried out in this Arizona air! Despite the minor cosmetic blemishes which is probably why I got it for so cheap on Ebay, it's a fabulous performer. I modified the notch filter so it operates in CW mode (the "peak" filter was a joke on CW) and upgraded the AM filter plus added the CW filter. It gets a bit hot internally due to poor ventilation and a hot transformer but there is no drift. My only complaint is that the tuning is a bit too fast and as such is touchy on SSB at times.

I have a Keen Kutter push mower,or what you call a manual mower,sitting in my old shed in my back yard.The mower is in used,but good condition,I thinks it dates back to the 1940's.I remember back in the early 1950's when I got my hands on a mower with a gasoline engine on it.I thought it was the best invention in the World.I used that gas engine powered mower to mow people's yards for spending money.With some of that spending money I bought a RCA metal cabinet table model tv set for $25.00.The tv set worked ok for a few weeks and then it got to where I would have to slap the crap out of that tv set to make it straigten up for a while.I think I did my job in the Army ok,I never heard any complaints from anybody about that.

That's a great, classic radio. Many people got their start in the hobby with one of those. Even though it's single conversion, it's a very decent, sensitive receiver and outperforms a lot of cheap dual-conversion units.

I usually use bandspreads like you are currently. Unless you're trying to ID a station and find it's true frequency, it's more like a fine-tuning control. I've always wanted to buy another DX-160 and add a digital display, but that's a project for another time.

Apparently you are not so novice that you don't think you
don't know or can't recognize ham vs marine broadcasts.

> there seem to be lots of other transmissions that can be heard and that
> cause the S-meter to jump over, but which aren't speech or code. - Some of
> them sound like a rushing noise, and others are like a whine produced by

There are OFDM and QPSK signals on HF that may sound
like that.... or it may be motor noise.

> Some are just a noticeably silent station, with no voice or message. - Can
> anyone suggest what these "broadcasts" are?

Some stations are so distant and weak that all you
get is the carrier... but then there are local RFI sources.
One way to tell the difference between a real signal and
local RFI is QSB. A real signal will typically fade. Local RFI is
typically steady.

> Is there any way to filter them out? - Since there are so many of them,
> would this suggest that I have an antenna that is too long?

I don't think so. I suspect your "indoor ground" is picking
up local crud.

>
> The DX-160 has bandspread tuning in addition to the main tuning, seen on a
> large main tuning dial, and I'm using the bandspread tuning to go back to

The last bandspread tuning receiver I had was an NC-125.
Boy, I wish I had never sold it.

> - Do you actually "zero" it and then scan (to the left in my case) by a
> given number of KH/MH, or do you just go back and forth near the station
> of interest?

Both ways. When just "prospecting" I wouldn't worry about
calibration. When I was "serious" I would calibrate.

My current main receiver is xtal accurate to about 10 Hz.
It's nice to know the frequency to that accuracy without effort.

>
> I'm somewhat disappointed in what's available in English (or French)

C'est la vie.
HF is a low fidelity, noisy, but interestingly exotic medium. If you
simply want to exercise your French there are probably better resources
elsewhere. (But if you can understand a French broadcast with
heavy QRM, QRN, and QSB then you know your French is good.)

Try something like The Nation Radio or Hightower Radio for more in that area. There used to be a station called Radio For Peace International out of Costa Rica but I think they are inactive now. But google Hightower Radio and that should get you to some liberal progressive talk. I don't know if you are in the whole satellite radio scene but Sirius has a liberal channel at 146 on the satellite. Not to mention sometimes if you have a regular C band or Ku band radio you can find that too. It is worth a try and I am trying to figure out some more stations you can try.

Once you get out of the bigger metros there is little liberal or progressive talk on AM or FM. But probably the internet and satellite is best for that. Shortwave has primarily been taken over by the religious organizations and the usual hard core right wingers.

Hello all Dxers,

I have worked a special transmission from Cupid Radio in Holland for North America DXers and CIDX members in February.

Cupid Radio has been active for the past few months and has made it here in Montreal on several occasions when propagation conditions are good. We hope that conditions will be good for this broadcast.

The Broadcast is schedule for Saturday, February 17th, 2007, from 1400 - 1600 UTC on the frequency of 15070 KHz, antenna will be turned for the eastern part of North America.

There will be some announcements on air from Me that I have sent to Cupid Radio , to send greetings to all Dxers and CIDX members.

All Dxers that will hear Cupid Radio can send their reports, there will be 3 beautiful QSL's available and a 3 page information sheet about Cupid Radio itself. There are 2 ways to send your reports:

via email: cupidradio@hotmail.com

By regular mail: Cupid Radio, P.O. Box 9, 8096ZG, Oldebroek, Netherlands

All reports are welcome and will be verified, to receive a QSL card, all that is needed is to send a postcard representing the City where you live.

Thank you Rinus of Cupid Radio for making this possible and hope that propagation will be good for this special broadcast.

If you have any questions please feel free to write to me: gletourneau@yahoo.com

2923. The Astucia Report: John Lennon's Security on the Night he was Murdered

Newsgroup: rec.radio.shortwave
Date: 2007-02-06 12:28:45 UTC
From: Salvador Astucia <cropdustersal@cs.com>
Message-ID: <1170764924.947397.49360@l53g2000cwa.googlegroups.com>
Source record: 104922

Anyone who runs a radio station is welcome to include the following 90 minute talk show in their programming.

The Astucia Report: John Lennon's Security on the Night he was Murdered

Hosted by Salvador Astucia

Tue. Febuary 6, 2007:

90 minutes

Synopsis of Show:

Salvador Astucia talks, via telephone, with the communications director of Manhattan real estate management firm, Brown, Harris and Stevens, the company that managed the Dakota condominium complex where John Lennon lived and was murdered on Dec. 8, 1980. Astucia also calls and speaks with a vice-president of the Wackenhut Corporation because he suspects Lennon's true killer, Jose Joaquin Sanjenis Perdomo, was placed by Wackenhut as a security guard (or doorman) at the Dakota. Astucia asks the following questions to officials at Brown, Harris and Stevens and Wackenhut:

- Describe the nature of any business dealings between Wackenhut and Brown, Harris and Stevens, particularly those that may have occurred in December 1980(?)

- Provide all you know about the security guard/doorman on duty at the Dakota condominium complex when John Lennon was murdered? (Dec. 8, 1980 at 10:50 pm)

- How does Wackenhut respond to the allegation (made by many people) that the firm is responsible for the murder of union activist and nuclear plant whistleblower Karen Silkwood?

- What was the nature of Wackenhut's business relationship with the late William Casey, former CIA director during the Reagan administration?

At the close of the show, Astucia explains how he determined that Jose Joaquin Sanjenis Perdomo was Lennon's true killer. Astucia also evokes the 1966 landmark Supreme Court decision of Miranda vs. Arizona which addressed the problem of police using coercion to extract false confessions from suspects. Astucia compares Mark David Chapman to other people who gave false confessions, like John Mark Karr, the man who recently confessed to the murder of JonBenet Ramsey, but

prosecutors declined to prosecute Karr because his explanation of the crime did not match known details of the case. Astucia also cites the case of the Central Park Jogger, where four teenage boys confessed to raping and severely beating a 28-year-old Caucasian female investment banker jogging in Manhattan's Central Park, in 1989, only to have the true rapist confess years later. (Five boys were convicted of the crime, but only one denied any involvement.) Astucia notes the irony of the Central Park Jogger case because it was botched by the NYPD and Manhattan District Attorney Robert Morgenthau, the same people who sent Chapman to prison for killing Lennon.

To listen to program, go to

http://www.jfkmontreal.com

and click "Astucia Report" in the upper left corner.

END

2924. Newbie Question: AM vs PM ?

Newsgroup: rec.radio.shortwave

Hi,

New at this.

Just want to be sure that I have this correct -

"In general," listening is better in daylight hours Above 10 MHz, or so.

And, in the evenings, below 10 MHz,

Is this correct ?

Thanks,
B.

Yes. The sun produces more free charged particles in the ionosphere. That gives two effects.

First, low frequencies (like MW) are reflected by charged layers all day. Somewhere in the shortwave band is a frequency high enough so it doesn't reflect; the more charged the ionosphere, the higher this frequency needs to be. Higher frequencies than this cutoff proceed into space and don't return.

So in the day, more and more frequencies are reflected, from low to some high frequency cutoff.

Second, charged particles take energy from the wave, and reradiate it a quarter cycle later (which is how charged particles refract the waves in the first place, and enough refraction constitutes the reflection). In picking up energy, the particles move, and if the atmosphere is dense enough, they collide with the air and give up their energy unreradiated. This means that the wave loses energy and disappears. ``Attenuation.''

Low frequencies move the particles more, and so encounter attenuation before high frequencies.

The sun charges up lower denser layers of the ionosphere, and soon MW waves, which would reflects if they continued, instead get absorbed first by the newly charged lower levels. Higher frequencies still make it through to reflection.

Thus : absorption kills off low frequencies in the day, even though they always reflect.

Reflection adds newly-reflected high frequencies in the day.

So, in the day, go to higher frequencies; in the night, go to lower frequencies.

An X-ray event, if severe enough, will charge up enough of the ionosphere so that everything is absorbed, and it's called a radio blackout, meaning distance radio.

Cool!

At first Google Earth wouldn't run it, but it worked after a second
download.

Big deal, so she squawks like a duck on radio too, but why should the in-flight depravity of a lesbian surprise anybody?

I mean, a negro welfare mother just got through murdering her three fatherless toddlers by tossing them unclothed off a bridge in freezing temperatures last week and got no press coverage at all.

You see, these creatures are sick in the head, and that's why something wants them running the planet.

Way too general. In California, the higher frequencies from the West
work well into the local evening and the lower frequencies from the
West work well past Sunup.

Jim Hightower's radio talk show used to be on one of the Jackson radio talk shows about nine or ten years ago,I never listened much to it though.I think it was on either the WJNT www.wjnt.com or WPBQ AM station.ESPN came along a few years ago throwing money at WPBQ,so nowdays WPBQ is full time sports.As if Jackson needs another sports AM radio station! WJDX 620 AM has been a sports radio station for many,many years.

Roger Fredinburg has a great conservative radio talk show. www.regularguy.com He used to be on WFMN 97.3 FM www.supertalkms.com Roy Masters son got Roger Fredinburg removed from WFMN.Later on,Roger showed up on WPBQ.Soon after that,the mamager of WPBQ stopped carrying Roger's talk show.Most of the Republican Consevatives around here don't live in the Jackson city limits anymore,they moved to the suburbs.As soon as Paul Gallo's radio talk show and the Nell Neil www.gardenmama.com talk show and the JT and Dave talk show on Supertalk Mississippi are over with for the day,I switch over to something else.I can't stand Michael Savage and that Idiot bushButtKisser (I can't think of his name now,I quit listening to that bushButtKisser long,long ago,his two names begin with an L www.devilfinder.com Radio Stations Jackson Mississippi

Lyngsat is not a "satellite rig". It is simply a web site with satellite
information.

> or Starnetwork
> www.starnetwork.tv satellite rig,(which one is the best?)

Star Network is Free To Air - "FTA". That means it is free.
Any MPEG2 satellite receiver can receive it. I would look at a Pansat 2500A
with a 76cm dish for the Ku band.
Most any satellite dealer, local or online, can set you up.

> can I pick
> up Bo Gritz on that C-Band bird way up there in the sky?

Bo Gritz' Freedom Call (radio) is also on a Ku-band bird
http://www.lyngsat.com/galaxy25.html 11836 frequency (transponder 5 -
"GlobalStar Channel")
schedule http://network.theamericanvoice.com/schedule.htm
so you can use the Pansat 2500A w/76cm dish for this also.
For C-band please consult a dealer for technical details.

Pansat 2500A? OK,I will look into that.I will look in my phone book too
for satellite installers,or whatever.I think there are some dealers like
that around here.I prefer to buy locally if I can.

Now this man is capable of critical thought and reason. Most
Americans are unble to do so anymore.
In an emergency- with little more than a battery and wire to make
coils & an antenna with- I can make a broad-band AM transmitter to
transmit emergency code signals. When you lose your high technology,
a Intelligent and wise person will be able to make do with what he/she
has, if he/she has the knowledge to do so. I wish "McGyvering of
America" was so Instead of the "Walmarting of America", The nation
that can do so will beat us.

Greetings all -

Ive always been interested in shortwave radio, being able to listen to far away stations mainly.

I was hoping to get some recommendations on a small AC powered shortwave. Maybe something $150 or less. Ive seen plenty of sites that have radios at this price and cheaper, with some brands I know, like Sony, and some Ive never heard of.

I looked on jr.com, which seemed to have a good selection, but I dont know enough about the technology or the brands to know what I want / need.

Like I said, I would be interested in listening to international stations, Italy would be nice. I live in Rhode Island, on the East Coast, if that helps with reception.

I'm fairly ignorant of most things shortwave, but would like to get more informed.

Ive done some searching on this group for recommendations, but figured Id post the question again, to get the latest info.

Thanks

-peter

See!! See!! I told you weasles that the Bush Administration funding cuts at NASA would cause something like this! Now, I don't usually listen to Coast to Coast AM with George Snore'y, but you can be damm sure he's gonna have Richard 'Face on Mars' Hoagland on this evening's show to comment on this, should be fun with Snore playing the part of Maury and Hoagland playing the part of Rosie. Oh damm this should be good. . . . . .(Not to mention Letterman and his crew also)

http://tinyurl.com/26lpb7

ORLANDO, Florida (Reuters) - A married U.S. astronaut was accused on Tuesday with attempting to kidnap and kill a rival for the affections of a fellow astronaut after a bizarre 950-mile drive wearing diapers to confront the woman.

U.S. Navy Capt. Lisa Nowak, who has three children, was initially arrested on attempted kidnapping charges on Monday in Orlando after assaulting Colleen Shipman, a U.S. Air Force captain she considered competition for the affections of a male astronaut, police said.

Nowak was then granted release on $15,500 bail Tuesday morning on the kidnapping charge. But her release was halted at the last minute when police filed a new charge of attempted first-degree murder -- rocking the elite world of NASA astronauts.

Dear Peter,

This question has been asked previously and many people have their recommendations, most of which are worthwhile. I would recommend only that, for your first shortwave radio that will be used on a daily basis, that you do NOT buy a "used" receiver, good values though some of them are. I believe that it would be much better to buy a new radio from a reputable dealer in the United States. The factory will have an interest in you (they supply a one-year warranty) and the dealer will have an interest in you (they want your repeat business).

My personal recommendation to you is to buy a Sony ICF-SW7600GR receiver ($159.99 or less, generally much less). This is a fine receiver and is easy to use IF you carefully read the instruction manual. Auxiliary antennas can be used with this receiver should you

decide to do so after becoming familiar with it. An AC adapter (the least costly, most convenient to buy, and the overall best adapter is the Radio Shack Model # 273-1758 with its free Adapt-A-Plug # 273-1705, $12.99). This will allow the radio to become a "de facto" tabletop model. The Sony AN-LP1 Active Loop Antenna, designed specifically for the immediate predecessor of this model, works extremely well with this radio but is becoming very difficult to find. However, other external antennas also work very well with the radio and you can make your own very easily. Finally, I recommend that you buy a set of NiMH AA rechargeable batteries and a charger (about $20.00 at your local supermarket). These batteries, as well as an AC adapter, keep your operating costs very low.

While using this radio is easy in and of itself, knowing when, where, and how to tune foreign stations requires a learning curve. I strongly recommend that you also buy the new PASSPORT TO WORLD BAND RADIO and the new WORLD RADIO TV HANDBOOK. These two books will give you the whole picture.

There are other radios in this price class that are worthy but I feel that the Sony model offers the best combination of features, ease-of-use, and construction quality. (Not even to mention its versatility!)

The radio and the books can be purchased from such reputable dealers as Universal Radio, Amateur Electronic Supply, and Amazon.com, as well as J&R Music World.

Finally, I want to make you aware of the eleven-year sunspot cycle. This process directly affects the quality and quantity of the signals you can hear. Unfortunately, we are now at the "bottom" of this cycle; starting probably next year, the sunspot "count" will begin to increase, reaching its peak around the year 2011. (When there are more sunspots, radio reception can be improved, especially on the higher frequencies where signals can travel farther.) You can read much more about this phenomenon in the two books I recommend. Note that just because we are at the "bottom" of the cycle doesn't mean you won't hear anything, just that it is more challenging. And this is where an excellent receiver, such as the Sony ICF-SW7600GR, really shines.

With whatever you purchase, I wish you the very best of luck and I welcome you to a hobby that I have found stimulating and fascinating for almost fifty years.

Joe

2954. Re: Icom r71a won't power on

>
> j

Dear Sir,

I replied to your post yesterday, I got a message stating that my post was successful, but it has not shown up here. So I'll repeat what I wrote.

The ICOM R-71A has an operating system (firmware) that is volatile - that is, totally dependent on the lithium memory battery which has a finite life. Once the battery goes "flat," the entire operating system is lost. I believe your battery is reaching the end of its useful life and, in its weakened state, is causing your problem.

Merely replacing the battery won't help you. The battery must be replaced and THEN the radio must have its operating system reprogrammed. Unfortunately, as far as I am aware, only ICOM service stations can do this. I recommend that you telephone ICOM, explain your problem, and see if they agree with my diagnosis.

If it is necessary to have the radio refurbished, you will need to ship the radio to ICOM. (I recommend asking them if they will sell you the program by which you could reprogram the receiver yourself. As this is now an older, long-since discontinued model, they might agree to do so. In any event, it doesn't hurt to ask. You would also need to know the model of the battery you would need.)

I do not know of any other shortwave radio that has this design. This is a major problem with this otherwise excellent receiver and is the reason I personally did not buy one.

I wish you the very best of luck. Keep us informed of any developments. I hope this message goes through.

Best,

Joe

Just, don't buy the Tecsun/Eton/Grundig S350 - it is a cheap, plastic-
boxed piece-of-shit, or any radio that smells of the S350 (I mean
that, literally - it has a cheap, imitation-leather, smelly handle) !

Guten Abend,

You can try to plug a reel antenna with a STEREO jack, connecting the antenna to the ring and tip. Then it will activate the reel antenna for MW and LW.

It works for me. It is not always an improvement. It highly depends on the transmitter you're listening to, and the RFI conditions around you. Sometime the ferrite bar antenna embedded in the radio can be better since it is directionnal.

Tchï¿½ss,

Charly

KS,

Take the 'portable' AM/FM Shortwave Radio out-side the
House or Building during the late night or early mornings.

Use only the 'portable' AM/FM Shortwave Radio's built-in
Whip Antenna.

Tune around the Longwave (LW) Band and try to hear any
of these Longwave (LW) Radio Stations on this List :
http://en.wikipedia.org/wiki/Longwave#List_of_longwave_broadcasting_transmitters

IMHO - Since you are in Europe - You should be able
to Hear a few of these Longwave (LW) Radio Stations
by simply using the Radio's built-in Whip Antenna.

Next try using the Reel {Roll-Up} Antenna out-side
1 - Plug the Antenna Plug Half-Way-In and Tune around
the Longwave (LW) Band to see what you can hear.
2 - Plug the Antenna Plug Fully-In and Tune around
the Longwave (LW) Band to see what you can hear.

Once you have found that you can "Hear" Longwave (LW)
Radio Stations 'out-side' the House. Next try the same
in-side the House with the Radio next to a Window using
the Whip Antenna. Then Hang the Reel {Roll-Up} Antenna
out a Window connected to the Radio as in #1 & #2 above.

ABOUT - The Longwave (LW) Radio Band.

PS - I would 'second' Joe's recommendation ~ RHF

Sony ICF-SW7600GR 'portable' AM & FM Shortwave Radio
is the best Shortwave Radio "Value" for the Price at this time.

So. Most astronauts in the last few years get ham tickets. Most
astronaut calls are KC5 calls.

Astronauts wear diapers on launch and entry and during spacewalks. It's
nothing new to her.

Seems like the press is more interested in her wearing Depends than her actual crime...

I know many OTR truck drivers and it isn't all that unusual in the industry.

A statement from her to the police that she intended to kidnap and
kill her rival means she was planning something far more serious that
pepper spray.

I never realized Astronauts wear Depends,in Space,,, that does make sense though.
But what she did,the whole thing is funny as all get out.When I was a kid,we didn't have store bought diapers.Torn up old bed sheets or whatever filled the bill for us kiddies.And they would get washed and boiled in a big iron pot out in the yard and reused a few more times,over and over again.
